>gives me a real neato swing and looks nice when i say
>aaaaaaaauuuuuuuuuddddddiiiiiiiooooooo to the mexicans

Your obsession with visual stimulation isn't any big suprise, Tim. One
just has to check out the porn on your site.

>yeah your right i cant tell. i'd say making jokes about anything that turns on
>a bunch of mostly dirty fat assed cb'ers and there self gratification in return
>is out right gay so thanks for admitting it

"...a bunch of mostly dirty fat assed cb'ers"? Well, you are getting
closer to the definition of a keyclown. But the rest of your comment
doesn't make much sense. Are you referring to making jokes about amps?
Or are you referring to anything that turns on "...a bunch of mostly
dirty fat assed cb'ers"? Is "there [sic] self gratification in return"
for the joke, the amp, or the turn-on? But the hanging question is why
you think self-gratification is an act of homosexuality? Have you
drawn that conclusion from your fantasies when you masterbate, Tim?

bert.....you can get a 80 amp lamda on ebay...there is a guy in canada
that sells them from time to time for about $200.00 ...they work fine
for rf....but are a bit bitchy.......you have to choke out the rf from
the power leads. and if you need more than one, you can gang them
together with a lamda combiner, he sells that too..........just a
thought.....

Your bias is heavily biased against those that confront illegal
operators. Why?

>Is it because Aaron & George stir up the Bee hive and they start buzzing I
>should condem the bee's?

The buzzing you hear is the result of the continued trashing of the
Citizen's Band and other parts of the radio spectrum by morons that
have abandoned the entire concept of radio communication in favor of a
king-of-the-hill mentality. If these people could behave themselves
there would be no "George" or "Voobner". You are confusing the cause
with the effect.

>< And since you are proud to be a mother of three, do you want

>that got the US in trouble in Vietnam
>(Domino theroy)

No, I'm not joking. And the "domino" theory has some validity. The
proof is the proliferation in amplifiers and freebanders, and the
"in-your-face" attitudes of those that use them. Civil responsibility
is not being promoted by what you consider to be a minor violation: on
the contrary, and in case you missed many previous posts, illegal
operation is a federal offense carrying a typical fine of several
thousand dollars, up to a maximum of $17,000. That's not petty. You
are also failing to realize the nature of the radio spectrum as a
limited resource; i.e, if you are locked in a room with someone else,

you certainly don't want them doing something that will offend you, or perhaps worse. If you let them get away with it they will just continue.

Funny you should draw an analogy with Vietnam. I missed that one, but I have a direct experience with more recent events. I am a Beirut vet. Most people have forgotten that we got blown up over there by terrorists. All we did was turn tail and run, and we all know how far terrorism has come since then. Who's to say how things would be different if Reagan had stepped on the problem back then, but I can almost guarantee you that the US wouldn't have been considered by terrorists to be such a passive target. So why don't you go back and review your "domino" theory a bit.

>Maybe you need to lurk a bit longer.

Any you are using the same radio, same antenna, at the same location, and have had the radio calibrated occasionally? Other than that scenario, your argument just doesn't hold water.

No, I only bet what I can afford to lose...which is nada. I've been a Nets fan through all the really bad times. I spent many years watching them "find a way" to blow a double digit lead in the 4th qtr. and lose. The last time I enjoyed watching them win this much was when they sent Dr. J home for saying that they could "mail the score in" re. the 5th and deciding game in the opening round of the playoffs.

>uh, I'm assuming you mean "civil" and "criminal" court instead of
>"administrative" and "judicial" court, respectively.

Unfortunately, it is "administrative" court. I'm going to see if I can perform a Google search on r.r.a.p for a post made by a former attorney for the FCC. He laid it out for me because I told him that the method by which the FCC creates and enforces their "laws" just doesn't hold water wrt due process. Trust me...checks and balances it ain't. I'll e-mail it to youe when I find it.

>Regardless, both
>are actions that are brought in the same judicial court system, both
>types of actions can result in creating new case law, and both can end

I am planning on putting a pair of 1/4 wave antennas on my metal roofed garage. I plan on spacing them 18 feet, mounted on ball mounts bolted to the roof. I had planned on feeding them with equal lengths of coax, fed to a T, and then a length of coax to my cb. My question is, each antenna is 35 ohms, so when I feed them wilI see 17 ohms at my feedpoint? That would mean a SWR of 3 to 1? (52/17) Most of the antennas I have seen use 75 ohm coax, would that help my 3 to 1 SWR?

>

Interesting problem in several parts:

1. I will assume you know that the radiation pattern from this will be something of a figure-8, broadside to the antenna if they are fed with equal lengths of coax. You should get fairly deep nulls along the line thru the antennas if fed with equal lengths. Now you can steer the lobes and nulls with unequal lengths of coax. More on this caper later.

2. You are on the right track with the trucker's cophasing harnesses (and only someone with a 40 ft box behind him should even think of doing it mobile) but their problem is slightly different; here is what is happening: The antennas on the mobile are 50 ohm loads because they tap up the antenna to get 50. But if they just put two antennas on a T-fitting they get 25 which is your problem just less so. So they take advantage of a wrinkle called for some reason a Q-section which is an ELECTRICAL (not mechanical) quarter-wave of 75 ohm coax between the antenna and the T-fitting. So what?

As it happens, the Q-section will have the same relationship to whatever you call the input side as it will reflect on the output side. What it looks like = (Q-Section Impedence x Q-Section Impedence) / what it is attached to. Or in this case, 75 x 75 / 50 = 112.5 which when two of them are attached at the T makes half of that or 56 ohms which matches a 50 ohm transmitter pretty jake. Neat Trick, aye?

Now if you could use 75 ohm cable you would have two 150 ohm loads at the tee which gives 75 ohms or about a 1.5:1 SWR which is where I would call it even and quit although you might not get full transmitter loading it is one hell of a lot better to look up at a load than down on it. But there is still a slight problem.

Every coax has what is called a 'Velocity Factor' which just means that signal does not get thru the line at the speed of light. For Belden 8238, a pretty standard non-foam RG-11 style 75 ohm coax, this is .66. So the trusty formula for a quarter wave in inches 2782/ f(MHz) when multiplied

by .66 gives 67.5 inches (including connectors BTW) for a quarter-wave matching section. This means that two of them on a half-wave antenna will not come together at the T-fitting, a maddening state of affairs.

So make one of them 67.5 and the other three times that 202.5 inches and the resulting 22 feet will reach. But it will also mean that the primary lobe of the antenna is now going to be along the line of the antennas and be pretty dead broadside.

It his is what you have in mind, that's how to get it.

Dick N&#65533;BK

Hello ,

I have for sale a Navaho 457 base station . Comes with the box , powercord , and a handheld power mike. Radio is in immaculate condition and has never been modified . Has the 858 pll chassis. I am asking 100 dollars plus shipping costs . Please email me with questions and interests . Thankyou for looking.

vze3rvwz@verizon.net

Now I think I know what you meant, that if you want to fight an NAL
you need to do it in a Commission hearing. That's true at the
beginning, but by refusing to comply with the Commission's decision
will land you in civil court, where you could mount a defense based on
the validity of the debt. And despite the fact that it would be a
civil case it carries the same weight as a criminal case: i.e, the
Constitution still applies and the verdict is just as binding. The
rules may be different (rules of evidence, procedure, etc,) but that
can work to the advantage of either party. Regardless, even an NAL can
go to the Supreme Court, and the FCC regs can be tested just like any
other law.

>In order to get it into "civil" court, you must "sue city hall." Good luck on
>that one.

Not true, as I pointed out above. Refusing to comply with an
administrative decision will get you there, and probably more quickly
than if you initiate action yourself. And you might be suprised by how
many people actually "sue city hall" and win.

>>Laws can be enforced via civil or criminal law. Case in point: the

For all practical purposes that sounds fine. But the fact that you are co-phasing them tells me that you want to get the most from your antennas. I think you will find that your antennas are not going to be 35 ohms, and may not even be close.

If you really want to peak this out, find or build an impedance bridge, two L-pads, and a splitter. All are simple circuits to build, or fairly cheap to pick up on ebay. Install an L-pad at the base of each antenna and match them to the coax cables. Then run them (equal lengths, of course) to the splitter. The advantage with a splitter is that you can wind one very easily, and you can include a switch to swap the phase between the two antennas without the expense of a coaxial relay.

Just a suggestion...

Chip,
Instead of an electrical 1/4 wave going to each antenna
from a "T", make each feed line an electrical 3/4 wave length
long. You'll have a few feet 'extra', but that will make the
radiation pattern 'broadside' to the two antennas.
To make the radiatio pattern 'in-line' with the two antennas,
feed one with an electrical 3/4 wave length run, and the other
antenna with an electrical 1/4 wave length run.
The coax to each antenna from the "T" should be 75 ohms.
From
the "T" to the radio can be 50 ohms.
With a remote switch, the two antennas can be switched
between
the two radiation patterns, sort of like the old "SuperScanner"
antenna.
'Doc

PS - Page 8-28 of the ARRL's "Antenna Book", 1990 edition, shows
the switching arrangement.

As long as the lengths of the feedlines are equal their length makes
no difference on the antenna phase/radiation pattern.

> To make the radiatio pattern 'in-line' with the two antennas,
>feed one with an electrical 3/4 wave length run, and the other

This will have the same effect as using equal lengths and reversing
the phase of one antenna, and produce the "broadside" pattern you
describe above.

My mistake, you get the broadside pattern when they are fed in-phase,
with equal lengths of line. When fed 180 degrees out-of-phase you will
get a figure 8 with sharp nulls to the sides (perpendicular to the
line made by the antennas). Regardless, the length of the lines does
not change the radiation pattern provided the lengths are equal.

Sparky,
You're right, the length of each feed line and how
their lengths compare does produce the radiation patterns
as you (and I) described. The use of 75 ohm impedance
coax for those feed lines produces the desired 50 ohms
impedance at the 'T'. Gotta do both to make it 'right'.

Tony Brown wrote:
>
> Do anyone knows where to turn up the power on a Browning Mark III?

You won't be happy unless you burn it up or make it
sound like crap.

Radios are only designed to modulate a certain amount of power.
By increasing the power, you need more modulation to 100% peak
the power. These peaks are supposed to be 4 times greater then
the dead key. 4 watts RMS "swings" to 16 watts PEP. If you now
put out 5 or 6 watts dead key, you now need to "swing" 20 or 24
watts to fully modulate the carrier. AM is a mixing process. For
a 4 watt signal, it takes 2 watts of audio. Parts in the radio
were only designed to produce 4 watts of properly modulated signal.

Limiters are your friend. They allow the human voice, with about
a 20% peak to be 40% to 50% peak on transmit. If you cut the limiter,
you will have to turn your modulation down to prevent overmodulation
and the resulting splatter.

It is much better to use a stock radio with an external device
that is adjusted for a dead key 25% of the peak to allow the AM
signal to be cleanly amplified.

Your signal should show about 4 times increase on a peak meter
and about a 2 times increase on an RMS meter.

I suggest you read Bill Eitner's AM tutorial before asking
more questions. ;->

i doubt it dave. if there were all these high power stations you speak of then why cant you hear them all the time? instead what we get is pure white noise from so many stations talking all at once and nobody being head and shoulders above the rest so they all just blend together. perhaps if there were no amps that level of white noise would be lowered some but the same problem of thousands of stations talking on one channel at the same time during a open band would still exist and it would get no better.

dave have you never worked sideband on 11 meters? it happens ALL THE TIME.

>
>BTW, I have NEVER heard an admitted barefoot station, in all my years of
>CB, give me more than an +10 over S9 signal, when the skip is running,
>and those cases are rare.

no dave i didnt say anything of the sort. i wouldnt say a certain propagation path cant be saturated but for sure a certain frequency can and 27.185 during most daylight hours is a prime example

>An interesting theory you are proposing. Are you of the belief that the
>propagation path can be "saturated" to the point that once a specific
>level is reached, that no further increase of power will push the signal
>above that?

wow dave this means that a barefoot station giving you an s3 would jump up to an s8 by going to 4000 watts. thats not too much of an increase if u ask me.

>40 watts is 10 db stronger than 4 watts. 400 watts is 20 db stronger.

1/4~ antennas need only 9ft. between them to be co-phased correctly.
Use a standard 75ohm co-phase harness to connect with the radio.
U would be happier using 1/2~ or even 5/8~ base antennas on your rig.
A couple Antron 99's would blow some serious smoke in a co-phased setup.
The key word here is "conjugate match", the source will deliver full power
to the load only when the resistance of the load matches the resistance of
the source, regardless of swr.
Using the K.I.S.S. principle will help you to Keep It Simple _____.

Hi guys, (& gals)

I found this on r.r.a.p, thought it was kinda interesting. Think it's for real? Opinions?

(Cut from rec.radio.amateur.policy:)

The following came from K3KO -- direct contact info is included if interested.

(Incidentally, looks like they've found a way to make good use of 27MHz freqs down there -- they've turned them into ham freqs! FCC, are you listening?)

Guys,

I have been in contact several times with H44A (Sam).

In conjunction with their National Disaster Office in the Solomon's, Sam is trying to get the locals licensed.

There are many obstacles. The people of the Solomon's exist in a mostly non-cash environment. The personal purchase of anything like radio gear is out of the question.

Sam is in need to donations of ham and CB gear. In H44, nine of the CB channels have been allocated to amateur radio. CB gear is quite useable for them.

He will also welcome with "open arms" any ham from any country who wants to help out teaching (+ equipment work). Stays for weeks to months would be greatly appreciated.

This might be a great opportunity for those interested in performing international good will via amateur radio.

Sam and the director can be reached via E-mail:

lotiyates@yahoo.com

Sam is H44A and the director is Mr. Loti Yates.

UNCLE SAM wants you!

Aaron:(just as Sparky lights the match) NO! STOP!

(loud explosion)

Sparky: (screaming) I'm on fire! Somebody help me!

(Sparky runs back through the house with his beard on fire, screaming for help. Aaron and George race behind him with teacups filled with water)

To Be Continued

Finally, Aaron and George manage to catch Sparky and beat out the fire in Sparky's beard with the teacups.

Sparky: Thanks guys! That was close! I saw my life flash before my eyes.

Aaron: No prob Sparky. You know we love you.

George: Speak for yourself, Aaron! Faggot!

Sparky: Can we eat now?

George: Well, we could if you hadn't blown up the grill!

Aaron: It's OK Sparky. We'll just grill the steaks on the stove.

Sparky: I don't wanna wait! I'm getting dizzy. My cholesterol must have dropped below 300.

George: Here, drink this.

Sparky: What is it?

George: Bacon drippings. It will bring the cholesterol level back up in your blood.

Sparky:(drinks greedily) Burp! Thanks George.

George: No problem. Hey Aaron, you still have that "Little Girls Gone Wild" video?

Aaron: I think so…check over there in the gay porn by the VCR.

George: Faggot! (looks for the tape)

Sparky: I'm hungry! Let's eat.

Aaron: Just hang on a minute. Let me get these damn steaks cooked. (throws the steaks in the pan)

George: (tearing his eyes off the video) Sparky, get the salad and dressing ready, will ya? I'm busy now.

Sparky: OK, George. (Sparky sets the table)

Aaron: How do you guys like your steaks?

Sparky: Raw is fine with me.

George: (rubbing his crotch while watching the little girl video) I don't care. Yeah, raw is fine with me too.

Aaron: (mumbles) Damn weirdo's…

Aaron: (grease splatters on Aaron's hairless chest) Ouch!

George: Aaron, do you mind if I take this video home with me?

Aaron: Sure, take it. You know I don't like females.

George: (under his breath) Faggot!

Sparky: Can we eat now?

Aaron: Yep! Steaks are done. (Aaron places them on the table)

Sparky: I'm first George! That's my steak!

George: Whatever Sparky! Hell, I'm just gonna leave now. (grabs the video and heads for the door)

Aaron: Where you going, George?

George: Um…uh…I'm not really hungry now. I think I'll just watch this tape at home.

Sparky: Good! Gimme his steak.

Aaron: OK George, see ya later.

George: Bye

By way of background, Bert, the Amateur Service got 26.96-27.23 after the 1947 WARC cut down 20 meters. The fifteen meter band from the same WARC was not cleared until May 1954. This was an allocation originally in ITU Region 2 (the Americas) but Region 3 (Asia/Oceania) followed suit.

When we withdrew it in Region 2, it stayed Amateur in a good part of Region 3. New Zealand put it's CB lower down and there are still Amateur allocations around 27. My guess is that this is nothing new but simply a reflection of practices from a long time ago.

The Kiwi regs are available on-line and make interesting reading with a 120 watt power limit.

I wonder if a ZedL can legally work Statesiders?

sociopathic wantabee.....interesting term sparks.....oh well.....if you must insist.....i have been in contact with the man who owns this marvelous piece of radio art.....and he assures me that we can deal if it does not sell on ebay..considering he lives a short ways from me....so i do have a liftgate on my dually.....and it will be needed for this baby.....and as soon as i get rayray(a licensed radio amateur) to modify this thing for me so it will talk on 10 - 12 meters, then i will be 10-8 at the base as well as the mobile, then i will go a looking for our favorite pimp while he is shooting skip on some mudduck channel, and drop the ever lovin maul on his candy ass.....can you smell what sdj is cookin.....????? don't you jus love it when a plan comes together.....sdj in bear country in the big horn is back quiet.....

ps...another radio amateur said that he would modify the gammas on my jo gunns so that they will be able to handle the deadkey on this bad boy.....i appreciate the help that the amateur community does to better the lot of keyclowns , as you would say, there sparks.....we cbers appreciate those enlightened individuals in the ham community that do not have terminal anal retention. we appreciate all of their help to make our ancient mary base stations and mobiles 10-8 and great.....yep , we sure do, no doubt about it.....and tim nebout.....get those jugs ready.....get that 1966 galaxy ready.....sdj is gettin up.....get down with old baytown.....

26.720 lsb is the #1 frequency to work the new zealanders on 11 meters. when the band is open down there at night i've sat down there and worked them one after another for hours at a time and often i'm the only stateside person on the freq so theres almost a little pile up. i think its there version of channel 38 down there. theres also a guy named george in auckland that hangs out on 26.660 i used to work every night. he's got a pretty big group of guys down there in new zealand that he's always talking to but he seems to run the freq and is a real old fellow. if some of you guys in the midwest and west coast listen right after it gets dark i'm sure you can hear them too know problem

The ZLs do a couple of other cutes like 7.1-7.3 is secondary Amateur (so long as no broadcaster bitches and 7 MHz is pretty useless for broadcast to or from New Zealand) so in days of old I remember ZL2BN calling for 'car mob-ile and stations under 50 watts'.

The Solomons are near enough to NZ to have used the kiwis as the jumping off area for Guadalcanal which is in the Solomons. It would not be too surprising if their Amateur rules are pretty well in line with ZL-land.

Incidentally, the Solomons are Hotel Four Four never Hotel Forty-four. Same with Papua as Papa Two Niner and a few other of the letter/number prefixes. Next time you take a test, you will know :-)

Tim, I think you've come real close to at least one problem between the code vs no codes and hams vs cbers. Years ago I was interested in radio and electronics. I did meet a gentleman who lived perhaps 4 miles away who was licensed (W2ZS, Russ Deane). I never saw a Q&A manual (I doubt they had them back in the early 60s). I memorized the code. I took the test from Russ with no extraneous paper (ran the ohm's law stuff in my head) and passed the Novice. Russ ran the paperwork upstairs to his wife (who was a lawyer as well as a notary public) to have it notarized. The interesting thing occured a year later when my novice expired (one year, NON-renewable, is what the novice license was back in 1962). I got to 10 words per minute AND NO MORE. I failed the 13 test once in Buffalo and once here in Rochester. A friend of mine, Tim, WB2KAO, who was 4 years younger than I told me he would GUARANTEE me passing if I'd promise him something. Ok, I bit. Bought a code record (yep, they were vinyl back then - Amico, I think, made the code record). I promised him 15 minutes a day - NO MISSES - for one week. Guess what? At the end of the week I was up to 18 words per minute and passed my general in 1964 (the novice ran from May or June 1962 until 1963). Then I started enjoying it. In 1966 I obtained my commercial telegraph ticket as well as my extra and 1st phone. In 1967, I copied, without error, 40 words per minute on paper for the U.S. Navy.

My problem was twofold:

1) I memorized dots and dashes originally. This is guaranteed to give you a BIG problem up around 10 or 12 words per minute.

2) I was TOO LAZY to give it a decent effort. Heck, 15 minutes a day for a week is what? Seven times 15 minutes? 1 hour and 45 minutes?

True, Morse may be somewhat obsolete - but what was the real problem? True, I went about it the wrong way at first - but, again, the problem?

Been there, done that. I WAS TOO LAZY. This is what a number of people believe is the underlying cause of some of the discontent between the code vs no code and ham vs cber (and, of course, the antics of Aaron do NOT help in any way). The Q&A manuals are also causing some angst amongst the ranks as well.

Just my two pennies' worth.

73 from Rochester, NY
Jim

Sparky: Good! Gimme his steak.

Aaron: OK George, see ya later.

George: Bye

To be continued….

Scene: Much later in the evening after George has gone home to watch his kiddie porn, we return to find Aaron and Sparky enmeshed in each other's arms.

Aaron: Sparky, I knew you would come around.

Sparky: Well Aaron, I kind of feel guilty…almost as if I'm slipping back into my old self. I've really tried to kick this man habit, but I can't seem to stop having feelings for you.

Aaron: Well Sparky, I always knew we were meant for each other.

Sparky: I only ask one thing of you, Aaron.

Aaron: What might that be, Sparky?

Sparky: All I ask is that you don't breath a word of this encounter to George.

Aaron: Fair enough. I know he's a bit of a bigot.

Sparky: Yes he is, but he's still my only real friend. You know, I can't count the times that he's tried to save me when I've gotten in over my head on the newsgroup.

Aaron: I know Sparky, and he's done the same for me. I really love him, but I can't let him know that.

Sparky: So, we're sworn to secrecy, right Aaron?

Aaron: Absolutely! Remember, we did take the ACK pledge.

Sparky:(chuckles quietly)

Sparky: (tentatively) OK Aaron, I'm all yours.

Scene: Fade to black…

To be continued…

The whole story, up to now….

(Knock at the door) Aaron opens door wearing his skimpiest thong underwear

Aaron: Hi Sparky! How are you!

Sparky: I'm good Aaron. Is dinner ready?

Aaron: Almost. In the meantime, you can snack on me, but we need to hurry before George gets here.

Sparky:(screaming) Aaron! Will you shut up with the advances! I already told you I've started to like women now! Now leave me alone!

Aaron: OK, OK! I just thought we could be like the old days again.

Sparky: No, I'm really going to stick it out this time.

Aaron: (sniffling) Ok Sparky, have it your way. I'll respect your wishes.

Sparky: Where's George? Do we have to wait for him to eat?

Aaron: Yes, he's bringing the salad.

Sparky: OK. Got any snacks?

Aaron: I think so, let me check.

(knock at the door)Aaron answers the door.

Aaron:(exclaiming) George! My God! What happened to you?

George:(crying) I was just out minding my own business, following this little girl, and all the sudden, wham! Her Dad must have seen me and punched me. I had just asked if she wanted some candy too. I think I could have had her. Then the Dad pulled out of the window of my Pacer, and beat me some more. I think he dislocated my shoulder too.

Sparky: Can we eat now?

Aaron: Sparky, can't you see George is hurt? Go get one of the steaks for George's black eyes. And while you're in the kitchen Sparky, get some ice for his broken nose and busted lip too.

Sparky: OK, but I ain't eating the steak that you use on George's eyes!

Aaron: OK, whatever!

(Sparky spends fully 5 minutes trying to figure out which steak is the smallest, so he can have the biggest…then finally he returns)

Aaron: God Sparky! Why did you take a bite out of it? It's raw, for Christ's sake!

Sparky:(unintelligible mumbling caused by mouthful of raw steak)

Aaron:(grabs steak from Sparky and applies it to George's eyes) There now George. Is that better? Aaron knows how to make you feel better, doesn't he?

George: Yes Aaron, it's much better now. Thanks, you know I bruise easily.

Aaron: Hey Sparky, light the grill.

Sparky: Hey, those steaks ain't half bad raw! Do we really need to cook them?

Aaron: My God Sparky! Sometimes you act like a Neanderthal! Light the damn grill!

(Sparky goes out back, turns on the gas, clicks the igniter repeatedly, nothing happens. Goes back inside for matches and returns)

Aaron:(just as Sparky lights the match) NO! STOP!

(loud explosion)

Sparky: (screaming) I'm on fire! Somebody help me!

(Sparky runs back through the house with his beard on fire, screaming for help. Aaron and George race behind him with teacups filled with water)

Finally, Aaron and George manage to catch Sparky and beat out the fire in Sparky's beard with the teacups.

Sparky: Thanks guys! That was close! I saw my life flash before my eyes.

Aaron: No prob Sparky. You know we love you.

George: Speak for yourself, Aaron! Faggot!

Sparky: Can we eat now?

George: Well, we could if you hadn't blown up the grill!

Aaron: It's OK Sparky. We'll just grill the steaks on the stove.

Sparky: I don't wanna wait! I'm getting dizzy. My cholesterol must have dropped below 300.

George: Here, drink this.

Sparky: What is it?

George: Bacon drippings. It will bring the cholesterol level back up in your blood.

Sparky:(drinks greedily) Burp! Thanks George.

George: No problem. Hey Aaron, you still have that "Little Girls Gone Wild" video?

Aaron: I think so…check over there in the gay porn by the VCR.

George: Faggot! (looks for the tape)

Sparky: I'm hungry! Let's eat.

Aaron: Just hang on a minute. Let me get these damn steaks cooked. (throws the steaks in the pan)

George: (tearing his eyes off the video) Sparky, get the salad and dressing ready, will ya? I'm busy now.

Sparky: OK, George. (Sparky sets the table)

Aaron: How do you guys like your steaks?

Sparky: Raw is fine with me.

George: (rubbing his crotch while watching the little girl video) I don't care. Yeah, raw is fine with me too.

Aaron: (mumbles) Damn weirdo's…

Aaron: (grease splatters on Aaron's hairless chest) Ouch!

George: Aaron, do you mind if I take this video home with me?

Aaron: Sure, take it. You know I don't like females.

George: (under his breath) Faggot!

Sparky: Can we eat now?

Aaron: Yep! Steaks are done. (Aaron places them on the table)

Sparky: I'm first George! That's my steak!

George: Whatever Sparky! Hell, I'm just gonna leave now. (grabs the video and heads for the door)

Aaron: Where you going, George?

George: Um…uh…I'm not really hungry now. I think I'll just watch this tape at home.

Sparky: Good! Gimme his steak.

Aaron: OK George, see ya later.

George: Bye

Scene: Much later in the evening after George has gone home to watch his kiddy porn, we return to find Aaron and Sparky enmeshed in each other's arms.

If you want true directionality, however you phase the antennas, you
must be able to circle the installation at a far distance and see the
two verticals vary from 'in phase' (stronger signal to/from the setup)
to 'out of phase' (virtually non-existant signal to/from the setup).
This WILL require the antennas in question be 180 degrees or more apart.
180 degrees yields 18 feet of separation on 11 meters. Bear in mind,
the coax has a velocity figure and 180 electrical degrees in the coax
will be MUCH shorter. This does NOT remove the 18 feet separation
requirement of the antennas. The co-phasing on trucks is generally to
'round out' the transmitted signal (eliminate dead spots).

I'll go halvsies with you. Talk about a vast effort for a half-vast
result.

Note that while he was Bozo*Flushed long ago, I must still be live to him.
At least he recognizes that he's beating hell out of a dead horse with
Ancient Mary. Now if we could convince him that ownership of a
dualie-skate makes him about 5 steps lower than owning a Lexus SUV; the
pride of ownership is second only to the expense.

I have the strangest feeling that this whole caper came about under the 'two antennas are better than one' idea married to 'the truckers must be right'. The cute aspect of this one is having to match two 35 ohm loads (maximum, I suspect closer to 30 would be the result) to a 50 ohm cable which does take some doing. Directionality is not even on the radar. And I think we may have confused the issue with velocity factor which is why I threw in the 3/4 Q-section.

The trucks use a phasing harness with some cheap coax that has a higher velocity factor so it kind of looks like the treasured nine feet. Don't feel like digging out the Smith Chart stuff to calculate what a real 3/8 section would do but I doubt if it would be pretty.

Fantastic post, Jim. I'll be the first to say that the hardest part of learning the code (At least sufficiently enough to pass.) is to make the decision to just sit down and DO IT! I personally liked the ARRL CD's (My...how times have changed, eh?) as well as Gordo's cassettes. Fifteen minutes of quality time (You're doing this for one's own betterment and enjoyment, right?) for say a month get's it licked. I liked the league CD's because the coursework was sent at fast-Farnsworth, 15 to 18-wpm with the words spaced out to 5-wpm. The actual test is at approx. 13 to 15-wpm, so the characters feel as though they're "floating" in. A great confidence builder.

Wanted by nostalgic collector in Australia, old CB magazines.
Any title, country, age or condition. Drop me an email even if you only have one, I'll still be interested.

Also wanted-
Midland 7001, the 26 to 28Mhz full coverage version with digital frequency readout, NOT the 40 channel one. Doesn't matter if its been converted to 10m amateur band.

Cobra 21GTL, the one with volume, squelch and "dynamic".

Midland 100M

cheers
Jack

Since I'm coming into the thread kinda' late, I can't see what the big problem is.

Pick your spacing for the pattern you want and devise a Wilkinson power divider to split the power accordingly.

A Wilkinson power divider is nothing more than (2) 1/4 wavelengths of (in this case) 75 ohm coax. Naturally you would calculate the 1/4 wavelength based on the velocity factor of the cable you're using. Additionally, you may use odd numbers of 1/4 wavelength sections if reaching a particular spot is necessary.

Personally, I would do what HY-GAIN did a few yrs ago.

Some of you may be old enough to remember the HY-GAIN people.

They had a little box that allowed you to change patterns with a rotary switch on the front.

The insides consisted of a few pieces of 75 ohm cable of appropriate length just coiled up neatly and stuffed in whatever place it would fit. These coax's attached to the rotary switch as needed.

I don't, at this moment, recall the spacing they wanted between antennas. I think it was 18 feet. From each antenna you ran two identical lengths of RG-8 or equivalent to the switchbox.

In one position you got a broadside figure 8, two more positions gave a front or back respectively. The last position was an omni position. The omni position was a kind of cheater because it had a high swr and I think it's because they switched both antennas in parallel without a phasing line. Not sure on this last position.

If anyone has the plans for a super scanner antenna then they have the working basis for co-phasing three verticals.

Someone said you must use 18 ft of separation when co-phasing antennas. This not entirely correct. You may use other values of separation. Each distance will provide a different pattern and require different lengths of the phasing lines.

The gain figures for the 18 ft separation and using a equal length harness is going to be about 3 db over what one antenna alone provides. If the single antenna provides 3 db gain then only look for a total of 6 db. If the antennas were 7 db gain each, then only expect another 3 db on top of the 7..not 14db.

The patterns are cardoid in shape. You can expect some deep nulls but they are very narrow in width.

In the ARRL's older antenna books I recall they had a page or two of different patterns and gains obtained using various spacings and phasing line lengths. It's worth looking for if your really into co-phasing antennas.

A last note about tuning the antennas. Since they are in close proximity to one another you may find the factory settings not quite perfect. It may help to assemble them both on the ground and tune them individually while seeing each other. This is not unlike trying to tune a truckers co-phased antenna system. It can be a little tricky and time consuming.

<snip>

Dweebo I suggest you try to spiff up your fiction style a bit. Merely having your three characters act like sissies for pages on end is boring and tedious to the reader. Go re-read "recradioCB Fear Factor Style" and see how I was able to not only work in several characters and their idiosyncracies, but propel the narrative with plot twists and satirical commentary.

You'll probably have to wait forever since SD is all talk. And what he doesn't know is that the Collins 21E requires a commercial 3-phase AC power installation to achieve the rated 5KW output.

Also he's unaware that many of these old glass-and-chrome beauties are presently used on the ham bands. Since they are run legally, they are treasured not for their ability to "put hurt" on people (an immature keyclown fantasy) but for their nostalgia value and technical elegance.

Changing your "e-mail" header again, just so I notice... you must be needing attention.

Wassamatta... Landshark not giving in to your effeminate charms, so you want to try your luck with me?

You seem to know all about posting through a UK ISP from America... maybe that Jock character is you.
But then again, you once said that we could all block you even if you did keep changing your header... but never did reply to the simple question of how it could be done with OE.
So maybe it's just more hot air.

Brainbuster.

Poor Voobner? After the things he posted about you?
Hey, when did the Porn King get morals and a conscience?
Could you let Aaron know where you got them from, so he can buy some?

As you seem a decent enough guy apart from your liking for Porn (I don't want Dave thinking I agree with that sort of filth), and as long as Aaron doesn't think I've gone soft on him... I suppose I could lighten up a bit and let him catch his breath.

But then again, I only make it on here on Sundays at the moment, so that gives him enough of a break.
Let's face it he can handle it, he has rhinoceros skin... shame it's wrapped round his brain.

Brainbuster.

Four Heathkit GW-21 CB Walkie-Talkies from the 1960s. I had a similar set as a kid. I got these with the intention of restoring them but just don't have the time. Two look to be complete and fairly clean with all controls and whip antennas. The other 2 can be used for replacement or spare parts. Two sets of snap-on leather straps included. Someone with the time and ability should be able to make a good pair. Sold as-is.

$40 for all four
Plus actual shipping charges
Send Zip code for shipping costs

Please email if interested,

Mike

With OE it can't. Those of us on ATT have a front-end screen to blast the Koreans, work-at-home, and feelthy pix meester, spam and it works admirably. But for this group, it's Bozo*Flush or nothing. I am not sure how but even when he changes names he stays pretty well flushed; there is only one Mad Boris.

Bob, you are correct that you don't need 18 feet of separation, however you will not get the deep null if you go closer. You can go farther apart and get other interesting patterns - but it is likely more managable at 1/2 wavelength separation. If they get closer, you begin to approach (depending upon phasing) either operation similar to a single vertical, or partial (to nearly total if they are as close together as the conductors in ladder line!) cancellation everywhere. Your point about gain is well taken. Further, one should consider any additional losses caused by the extra lengths of coax (usually not much, but, as you point out, maximum additional gain would only be 3 dB).

Personally, I think it very factually portrays the AKC'ers as they appear to readers of the newsgroup. As the old saying goes, "if the shoe fits, wear it". IF you wish to be portrayed differently, then act accordingly. Running around in circles, while wringing your hands about illegals and dreaming about little girls does not paint a pretty picture. FOW-10?

No BrainsBusted , my header doesnt change at all it is the exact same everytime, just the nic and or contact info changes If you were as smart as you lead us to believe you could figure out that OE will allow you to block domains, so do me a favor and block my domain unless you want to be like Landshark and Randy and pretend everyone is killfiled and reply to them anyhow. You choose to reply to me whatever my name is so what does that tell me.

>here. Are they illegal aspects related to CB? Yep...but aspects they are. The
>smattering of ham stuff on the NG's fair game as well, since many of the
>principles also apply.

Look at the intended purpose of the CB. It was meant to be a short-range radio service for business or personal use (BTW, nothing says that personal use doesn't include CB being a hobby). Currently the band can be used without a license. It is also intended for use as a method of emergency communication. RF piracy, freebanding, keydowns and 11m DX are not the intended purposes of CB radio. Now compare the intended purpose of the CB with the intended purpose of the CB newsgroup. They should follow similar lines, shouldn't they?

Now if an illegal operator transmits on 27.555, does that make him a CBer? Nope, not any more than if he transmitted on 7.555 or 1007.555. Taking that to extremes, if a ham makes a rig that uses a 2SC2078 -- an RF output transistor used almost exclusively in CB radios -- does that make HIM a CBer? Of course not. So just because a freeloader uses a modified CB radio doesn't make him a CBer.

The same thing with amps and modes. But let's take those to the other extreme. If someone operates a Part 15 garage-door opener on 27.085 does THAT make him a CBer? Of course not.

One more angle: assume that the CB were to be shut down. Since there is no more CB, do all the freebanders suddenly become hams? SW broadcasters? Pager services? Radio-navigation beacons? I don't think so.

You can also categorize the issues. CB radio is a small, sharply defined segment of radio communication. Illegal operators exceed those boundries into a much larger arena, using dozens of modes, magnitudes of power, and an unlimited spectrum. The sliver of space called the Citizen's Band becomes vastly insignificant, and is ONLY ONE of the MULTITUDES of services negatively affected by illegal operators. Yet they claim to be CBers? No, I'm sorry, that don't wash. CB radio is just the license-free curtain they try to hide behind from a public that doesn't know the difference.

As for twistie, yes he has a point, and his point is that he will draw any conclusion or make any connection, no matter how detached, ridiculous or illogical, in order to defend RF piracy. Or haven't you

read his posts for the past few years? Ever see that movie "Six degrees of Seperation"? You can claim just about anything to be an "aspect" of CB radio: tree-trimming, flood insurance, Harley Davidsons, prostitution, football, politics and religion.
While there is always some flexibility in any newsgroup, you need to draw the line somewhere. Twist tried to draw that line with his post, but he did not quote from the charter for this newsgroup -- there isn't one! There is nothing that says the topics must be about "all aspects of" CB radio, or "aspects only directly and specifically related to" CB radio. The former is twistie's definition, and by permitting him to define the newsgroup you are permitting ANYONE to define it as ANYTHING they desire, even going so far as for someone to say that the newsgroup is supposed to be about Coke Bottles (remember those old Coke Bottle radios?).

rrcb was created specifically to get rid of CB discussions on the ham groups. If the hams wanted to include illegal discussions in this group they would have included that as a reason for its creation. They did not, but instead created another group to discuss legalities: rec.radio.amateur.policy. This newsgroup is therefore defined by its name: "CB", or Citizen's Band radio. CB radio is defined by the FCC. RF piracy, freebanding, keydowns and 11m DX are not CB radio, and are therefore off-topic in this newsgroup. That is not my opinion, it is the only logical conclusion anyone can draw from the facts.

You moronic twit! There are "real" people that use Comcast. Why should anyone have to block the whole domain? You are a twerp, nothing more. If you want a real argument about this, stop changing your nic. Otherwise, you still lose the argument, and are changing your nic to defeat the filters.

Putz!

P.S. Did you enjoy the little girl video?

what it is is this.....we like amps.....we want
amps.....we love amps.....we like talking about
amps.....and most of all, we like using amps.....this is the
way it was, the way it is, and the way it will always be.....so if
that is too hard to swallow.....well, you can take a number and
stand by.....we will use our amps the way we see
fit.....they are our amps.....we built them.....we bought them,
we like them because we want them. now i think all you bozos trying to
get on the amp bus that have a problem with cbers using
amps.....well you need to get off at the next stop.....you are
not going to change anything....not now, not ever.....because that is
what it is.....can you dig that sucka?????????

You go boy! Dem AKC's are a bunch of gay-boy whining punksters! Man o
man...catch thier hair on fire, make passes at men amd follow little girls
around! Man o man o man!

3243. Mother's Day At Tim Nebo's

Newsgroup: rec.radio.cb
Date: 2002-05-06 05:37:07 UTC
From: avoobner@yahoo.com
Message-ID: <7c427561.0205052137.5a6e0c00@posting.google.com>
Source record: 123107

INT. - TIM'S APARTMENT - LAMARQUE, TEXAS - DAY

Heaps of dirty clothing, fast-food wrappers and drug paraphanalia. TIM is flopped on a bare, wine-stained mattress, his eyes half closed. There's a knock on the door.

TIM
(groping to find pistol)
F*ck. Wait a sec.

He crawls to the door, lifts himself to the latch, opens it a crack. It's SD JONES. He lowers the pistol, lets him in.

SD JONES
You look like sh*t.

TIM
You ARE sh*t.

SD throws a small bundle onto the mattress. Crack cocaine.

SD JONES
A little present from your cousin Train in Jersey.

Tim rubs his temples.

TIM
I can use it. Them b*tches had me up half the night with their sh*t. I swear I'm gonna cap their as*es. All of em.

SD puts an arm on him and leads him to the door.

SD JONES
You just need a little cheerin up is all. Take a look at what else I brought ya.

EXT. - TIM'S APARTMENT - DAY

A GIANT COLLINS 21-E BROADCAST TRANSMITTER sags in the bed of a dented-up DUAL WHEELED truck.

BACK INSIDE THE APARTMENT:

SD JONES
Can you dig that, sucka? Man says it'll put a 5K Bird slug in the corner all night long! Hee hee!

TIM
(longingly)

Yeah.

SD JONES
(whispers)
Just looking at it gets me all kind of....

TIM
(breathing harder)
Excited.

SD JONES
(perspiring)
I'm pickin up what you're puttin out, bro.

SD unzips his jacket. Tim yanks off his sweatshirt. SD reaches for

****
*****SCENE DELETED DUE TO COMMUNITY STANDARDS********
****

Tim and SD lie under a grubby white sheet. Both puff Marlboros.

TIM
So let's fire that m*therf*cker up.

SD JONES
I'm with ya on that. But we need a tech to tell us what to do.

TIM
How bout that ham buddy of yours?

SD JONES
There ain't none. I was just BS'in.

TIM
Well it can't be that hard to do. Come on. Let's try it.

SD JONES
F*ck it. Why not?!

CUT TO MUSIC MONTAGE -

.....SD and TIM reading book labeled RADIO THEORY --it's upside down.
.....SD and TIM pounding on the chassis with ball peen hammers.
.....SD and TIM painting SKULL AND CROSSBONES on front of cabinet
.....SD and TIM soldering random bunches of colored wires together
.....SD and TIM leaning against transmitter puffing a crack pipe

LATER -

TIM
Go ahead. Key that m*therf*cker.

SD JONES
No, brother. You do it. It was your idea.

TIM
Thanks, homie.
(proudly)
We're gonna be legends, man.
(beat)
Here we go....

EXT. - DAVE AND DEBBY'S HOUSE - SOMEWHERE IN THE MIDWEST - DAY

Dave and Debby sit on lawn chairs quietly sipping tea and reading the Bible. Suddenly....there's A BRIGHT FLASH ON THE HORIZON.

DEBBY
Look Honey! What's THAT?!

DAVE
(squinting)
HOLY TRIBULATION! IT'S DEM COMMIES! Dey done dropped a SIXTH PLANK NUKE on Texas! Quick! Git down in da bomb shelter and start mixin up kool-aid --- it's DA END TIMES, BABY!!!!!

No. That is the definition BECAUSE there is no charter.

Now this is interesting...

>Ahhh. There's the problem! No charter, then the newsgroup is
>{nearly} wide-open, IMO.

...and then you write this...

>Right -- there's nothing that clearly defines the group, other than
>the name of the newsgroup.

So which is it? Is it wide open? or is it defined by the name of the
group? You are contradicting yourself.

>>The former is twistie's definition, and by
>>permitting him to define the newsgroup you are permitting ANYONE to
>>define it as ANYTHING they desire...
>
>...and, to me at leat, it seems, by definition of the active members
>of the newsgroup, illegal activities are discussed as much as legal
>activities.

So you are saying this newsgroup is a democracy? "Um, is there a
charter for the newsgroup that specifically states this?" When were
the elections? What if the majority wants to talk about Coke Bottles,
or Constipated Buffalo, or Creamed Broccolli? Those topics fit with
the name of the group, don't they?

>Good post; thanks for sharing!

And I congratulate you on such a wonderfully concise integration of
the logical fallacies of division and composition, confusion of

absolute and qualified statements, ignoratio elenchi, argumentum ad populum, petitio principii, and ergo propter hoc. Did I miss any?

>
> Leland,
>
> I gotta ask. Work any DX back then?

Not that I remember. I do remember hearing DX stations from time to time, however the pile up on AM, with all of the heterodyne squeals, made copying the DX station almost impossible. Also most of the DX was in Spanish, so I assumed most of what I was hearing came from Mexico, or South America in general. At that time I was getting sick of the S7+ noise on most of the AM channels and was making the move to SSB. I started of with a Royce 23 channel AM rig, then switch to their 23 channel SSB rig. For some reason I didn't like the sensitivity and selectivity of that rig either so I finally settled on a combination mobile base Midland SSB/AM rig. That Midland rig was nice, and seemed to perform the best out of all the radios I had up till that time.

What really turned me off finally was the local group of idiots by the names of "Black-Knight", "Creeper", etc. that loved to hang out on channel 12, and then would follow others around to different channels and key over them. Finally one of the morons discovered if they dead keyed on your SSB signal everyone else on the channel could hear what you where saying plainly. At that time channel 16 was the unofficial SSB channel. Of course the squeal you got on SSB would drive you nuts. Since those yahoos all lived with in a mile or so of each other they just turned their squelch up to max, and nobody could get a word in unless you parked right in front of their house. Some of them were running a modest amount of "extra" power which didn't help the situation much. This was all right near the peak of the CB radio craze, where everyone wanted a radio, and seem to get it too.

I'm not the one with the "jock strap" collection on the wall, nor do I claim to talk to "saucer men" on the freeband. As far as bringing up the subject what's so wrong about asking somebody how their "other" hobbies are doing? People like asking you about the Porno you post on your web site, and I'll bet some of those girls are underage too. Of course you have them all sign a release form before posting their pictures right? Or are you just going to gamble that you'll get away with it until some chick, or her parents, get ticked off enough to sue you in court?

>radio discussions explicit in the hierarchy. These postings currently wind
>up in rec.ham-radio, where they tend to generate flamage all out of
>proportion to their volume.

Does it mention discussions about illegal radio operation? Does it
even mention freebanders? Or how about amps? NO. It says "Citizens
Band radio". And why was this newsgroup created? To get rid of this

kind of crap in the ham groups.

Now check this out: There is some joker running 1000 watts in the 10m band on FM, but he isn't licensed. Is he a CBer? NO. What if he changes his freq to 27.350. Is he then a CBer? NO. Why? Several reasons: First, can his power be more closely compared to a ham or a CBer? The answer is that his power is on par with that of a ham. Same with his operating modes. Same with his spectrum use. So which newsgroup should these IOs be hanging out in? The HAM groups, because they don't even come CLOSE to operating CB radio!

And BTW, advertising a CB amp is a federal offense all by itself, so not only are some of them just talking about illegal activities, some of them are actually committing offenses right in the newsgroup. Is that also permitted under your "guides"? NO.

>Now, let's compare this with -- hey, how about another Usenet
>newsgroup... uk.rec.radio.cb!
>
>http://www.usenet.org.uk/uk.rec.radio.cb.html
>
>(...and again, posting the relevant paragraph...)

<snip>
And again, another opinion.

>Simple; no limitations,

That's funny, didn't you just quote the limitations?

> because there isno charter -- only a guide, as
>the group is part of the amateur radio group.

Then go to uk.radio.cb with the illegal discussions.

>>And I congratulate you on such a wonderfully concise integration of
>>the logical fallacies of division and composition, confusion of
>>absolute and qualified statements, ignoratio elenchi, argumentum ad
>>populum, petitio principii, and ergo propter hoc. Did I miss any?
>
>Refuting the argument would be a start.

I listed that one, or can't you read simple latin?

>A simple solution would be creating another group -- alt.radio.cb.

Why? There is already alt.radio.cb.skip and alt.radio.pirate (and just to be redundant someone came up with alt.pirate.radio). They, as well as the rec.radio.amateur newsgroups, are certainly more relavent to what these delinquents are doing.

Just one thing, Frank. Assuming (Which I hate to do.) that the club to which you refer is CBer's, neither do the members break "all" the rules nor do all the members break any rules. Then there's also the issue of severity. When does a slight infraction escalate into a serious offense? Or should it be "in for a penny, in for a pound?" I for one just don't equate some guy running a Ranger RCI-2950 or a Yaesu FT-840 on the legal 40 at 30 watts with "Kilowatt Charlie."

Now, if you're referring to r.r.cb as the club, the discussion of illegal activities (Whether major or minor offenses.) does NOT "disrupt the meetings." We are all free to participate or NOT in any thread that we find interesting or, conversely, objectionable. Now here is where Aaron actually sold me...well, sorta. Just as he's free to post views and opinions against illegal activity, the other subscribers of this NG are free to discuss said activities. BTW, much the same way that you are free to voice your objections to the mere discussion of same, Frank.

> Even
> better, would you vote to keep those maladjusted cretins in the club?

Ah, if it were only that easy to vote 'em out. It's like any other aspect of society. Enjoy the good and deal with the bad as best you can.

> I think the answer is, "only if I were one of those maladjusted
> cretins!"

Gotta think about that one for a bit. Take care, Frank.

Same with his spectrum use. So which newsgroup should these IOs be hanging out in? The HAM groups, because they don't even come CLOSE to operating CB radio!<<

Using your imbecilic logic, a hammie talking on a cb channel with a hammie rig is no longer a hammie.

>And BTW, advertising a CB amp is a federal offense all by itself, so not only are some of them just talking about illegal activities,<<

Which is supported by the government and by the rights granted us as a citizen of the United States......I know it's tough for you would-be dictators to comprehend.

> some of them are actually committing offenses right in the newsgroup.<<

You know nothing of actions done outside this group other than what we allow you.

>Is that also permitted under your "guides"? NO.<<

Talking of illegal activities? Why yes, it certainly is legal. As far as your claim of illegal activity taking place here,,,cite an example. Certainly nothing takes place here other than words being posted that agggravate you due to anal retentiveness and severe constipation.

>>A simple solution would be creating another group -- alt.radio.cb.<<

>Why? There is already alt.radio.cb.skip and alt.radio.pirate (and just to be redundant someone came up with alt.pirate.radio). They, as well as the rec.radio.amateur newsgroups, are certainly more relavent to what these delinquents are doing.<

A "delinquent" is associated with a misdeed or offense. Your name calling comes under this umbrella you constructed long before any mere discussion of amps that you do not agree with does. A discussion or exchange of ideas or information on usenet is not a misdeed or offense, as it has nothing to do with you unless you wish it to.....OTH, your name calling, by direct contrast, is a personal affront, meant as a flame to belittle and insult.
Delinquent.

>Just one thing, Frank. Assuming (Which I hate to do.)

Then don't. Draw your own analogies as you see fit. But consider that the CB is being trashed by the flagrant use of power and the associated in-your-face attitudes. And the freebanders who, when confronted with any kind of legal or moral accountability, come running for the security of the Citizen's Band. Or even many of the hams who automatically regect any notion that they cause interference and redirect the accusations towards the CBers. It all serves the same ends, and that is the legal CBers, the ones for whom the band was intended, are the ones that get the raw deal. And of course there is always going to be the "domino" issue -- just much longer until illegal activity proliferates until the band saturates with noise, the freeloaders start intruding on the other bands, and the harmonic interference becomes a serious safety issue?

There has been too much posted on these issues already, and I'm sure you have seen the responses. Just about every justification has been tried but none have ever had any validity. You also saw the I-don't-care-I'm-going-to-do-it-anyway-and-screw-anybody-else attitude, usually accompanied by a profane suggestion of a sexual act that can only be performed by a contortionist.

So go ahead and draw any analogy you feel is fair to both sides. I would like to hear somebody else's view, because frankly, I'm getting rather sick of these sociopathic morons.

>> Even
>> better, would you vote to keep those maladjusted cretins in the club?

But it's HOW we deal with the bad. Some people would stick their head in the sand until it blows over, which accomplishes nothing except to get your ears plugged with sand. Others are willing to take a more active role and stand up for what's right.

You're going to have to do better than the pathetic attempt above at pushing
my buttons Tim. What a loser. You're ticked because if you ever got a Ham
ticket nobody would even talk to you, so you're stuck talking to other
overaged kids, like you, on the CB.

>
>
>Using your imbecilic logic, a hammie talking on a cb channel with a >hammie rig is no longer a hammie.

By golly, you figured it out! You have to stay within the limits of the service or you are an illegal operator! Very good, twistie!

>>And BTW, advertising a CB amp is a federal offense all by itself, so >not only are some of them just talking about illegal activities,<<
>
>
>
>Which is supported by the government and by the rights granted us as a >citizen of the United States......I know it's tough for you would-be >dictators to comprehend.

Division.

>> some of them are actually committing offenses right in the
>newsgroup.<<
>
>
>You know nothing of actions done outside this group other than what we
>allow you.

Wasn't 2.815 posted enough times for you to read it completely? I'm
sure someone here can post it again in case you forgot what it says.
To sum it up, just the act of ADVERTISING IT FOR SALE is illegal, so a
newsgroup post can actually be considered prima facie -- it is, in and
of itself, the offense. I can't believe you misunderstood that the
first 15 times...(well, ok, I can understand it, you were busy beating
your dogs, right?)

> >Is that also permitted under your "guides"? NO.<<
>

>Sparky drew heavy breath with:
Then don't. Draw your own analogies as you see fit. But consider that the CB is being trashed by the flagrant use of power and the associated in-your-face attitudes.<<

This is simply an interpretation by you and of you, therefore amonunts to nothing more than pure opinion.

>And the freebanders who, when confronted with any kind of legal or moral accountability, come running for the security of the Citizen's Band.<<

Just you claiming it happens, Sparky, just you claiming it happens.

> Or even many of the hams >>

OFF TOPIC OFF TOPIC OFF TOPIC NYAA NYAA NYAA NYAA NYAA NYAA !
That's how you sound, Frank, old chum.

>who automatically regect<<

WTF is that?

>any notion that they cause interference and redirect the accusations towards the CBers. <<

Just you saying it, Frank, just you saying it....all BS as usual.

>It all serves the same ends, and that is the legal CBers, the ones for whom the band was intended, are the ones that get the raw deal.<<

Not at all. Most have adapted, which is what evolution is about...some of you merely have problems adjusting more than others.

> And of course there is always going to be the "domino" issue -- just much longer until illegal activity proliferates until the band saturates with noise, the freeloaders start intruding on the other bands, and the harmonic interference becomes a serious safety issue?<<

Yea, well you're gonna have to wait 'till the next DX cycle to flap this trash around, cause it didn't happen this go 'round......it's like you're in the pumpkin patch each year waiting on the Great Pumpkin to arrive

>There has been too much posted on these issues already, and I'm sure you have seen the responses. Just about every justification has been tried but none have ever had any validity.<<

Only people such as yourself require an explanation and when you don't get what you are ;looking for you make one up...after the "justification" angle usually comes an insult from you, followed by a failed attempt at a change of topic to focus on the person which you disagree with instead of your erroneous BS filled disinformation that had just been discredited

>You also saw the I-don't-care-I'm-going-to-do-it-anyway-and-screw-anybody-else attitude, usually accompanied by a profane suggestion of a sexual act that can only be performed by a contortionist.<<

Not really, just you claiming it takes place, Frank, just you claiming it takes place.

>So go ahead and draw any analogy you feel is fair to both sides. I would like to hear somebody else's view, because frankly, I'm getting rather sick of these sociopathic morons.<<

Imagine what that makes you when these "sociopathic morons" show a repeated pattern of proving everything you say incorrect.

>Even better, would you vote to keep those maladjusted cretins in the club?<<

Is this club the one you tried to start or the one Lelnad threatens violence with?

>>Ah, if it were only that easy to vote 'em out. It's like any other aspect of society. Enjoy the good and deal with the bad as best you can.<<

>But it's HOW we deal with the bad. Some people would stick their head in the sand until it blows over, which accomplishes nothing except to get your ears plugged with sand. Others are willing to take a more active role and stand up for what's right.<<

Yes, I agree, it's HOW you deal with your views of what constitutes "bad".
A perfect analogy is snow. It comes and it goes. It happens every so often, caused by mother nature, it can have serious consequences, but usually doesn't as we learn to live with it and manage it to some degree. It also will disappear in most instances if ignored long enough. Recounts of both are akin to Tales of Great Ulysses:they tend to be highly exaggerated. Then again, there is your type, who light a candle and curse the glare.

Source record: 123138

>Sparky wrote:
By golly, you figured it out! You have to stay within the limits of the service or you are an illegal operator! Very good, twistie!<<

That is ridiculous. Many hammies talk on cb with their rigs and many more DX on the freeband. This does not automatically strip them of their license...there is a process by the FCC before they get warned before they get warned before they get action taken.

>And BTW, advertising a CB amp is a federal offense all by itself, so not only are some of them just talking about illegal activities,<<

Which is supported by the government and by the rights granted us as a citizen of the United States......I know it's tough for you would-be dictators to comprehend.

>Division.
some of them are actually committing offenses right in the newsgroup.<<

You know nothing of actions done outside this group other than what we allow you.

>Wasn't 2.815 posted enough times for you to read it completely? I'm sure someone here can post it again in case you forgot what it says. To sum it up, just the act of ADVERTISING IT FOR SALE is illegal, so a newsgroup post can actually be considered prima facie -- it is, in and of itself, the offense. I can't believe you misunderstood that the first 15 times...(well, ok, I can understand it, you were busy beating your dogs, right?) <<

Nah, the dogs don;'t get beat, just let the coons take a small chunk out of their azz when yer trainin' them to hunt...makes 'em hungry and productive..even champions...if ya' know anything about blue blood breeding, check THE registry for top sportin' hounds...it's chock full o' Cooter Mae's blood.
My comments were directed at the topics, not posts for amps of sale. Nevertheless, you have accused many of being illegal based on their discussion, many of who have never posted an amp for sale.

>Is that also permitted under your "guides"? NO.<<

Talking of illegal activities? Why yes, it certainly is legal. As far as your claim of illegal activity taking place here,,,cite an example. Certainly nothing takes place here other than words being posted that agggravate you due to anal retentiveness and severe constipation.

>Pick any post that advertises an X-force, or Dave-made, or any other amp "capable of operation between 24 and 35MHz".<<

Ok, but it doesn't excuse your behavior and accusation towards those that have not advertised amps, if that is your sole act of justification.

>>A simple solution would be creating another group -- alt.radio.cb.<<

>Why? There is already alt.radio.cb.skip and alt.radio.pirate (and just to be redundant someone came up with alt.pirate.radio). They, as well as the rec.radio.amateur newsgroups, are certainly more relavent to what these delinquents are doing.<

A "delinquent" is associated with a misdeed or offense.

>Very good, twist. I see this has been a productive morning for you. Now take all this stuff you have learned and go discuss it with your imaginary shrink.<<

Your patterns are old and tired and serve only to solidify your position and presence.

3274. The Truth About Most Hams

Newsgroup: rec.radio.cb
Date: 2002-05-06 16:51:49 UTC
From: hfa9315@alaska.usa.com
Message-ID: <e97ee11a.0205060851.33048afa@posting.google.com>
Source record: 123139

As a Ham operator of many years one thing still holds true. Most hams are silly little snobs who use radio to build up their sense of self worth. All of you "good hammie" types may reply with a flame if you like, but the truth remains the truth.

Turn on your 2 mtr rig and listen to the local repeater. How does the content of conversation differ than what is encounted on local AM CB? There are good operators and lids on both.

The term CBer is a broad term. To some it means conversing on CH 19. To others it may mean a 4 watt AM base station and a 5/8 wave ground plane. Then to some it may mean a big bad amp that can key down "a gazillion
watts". To me, a nice Galaxy running 30 watts pep into a three element beam up around 65 feet defines it for me. The point is, what ever defines it for you is OK. There aren't a bunch of silly little people with silly little minds defining what is acceptable for others.

I have spoken with more interesting people on the freeband than one could ever hope to encounter on the ham bands. I have observed more good
operators on 11 mtrs than on the "real" bands...ie 15, 20 mtrs, etc. The best part is that the conversation involves more than "type of rig" or
"signal report" that is so common the the ham bands.

Just a quick note to the "good hammie types". I hold an advanced class license (WA9???) and have held said class for more years than I care to remember.

Haming could be a wonderful hobby. Instead it is nothing more than a bunch of small minds with low self esteem hoping to invoke their warped
thoughts on others. Having some sort of "power" in their local club some how
increases their self worth in their sad little world.

Want to try some SSTV? Take a look around 27.775....or maybe packet? look around 27.900. Oh, the FM DX has been rolling in around 26.675.....see
what I mean? These 11 mtr guys are the ones having the fun on the radio, and
isn't fun what it's supposed to be about? (And don't spew that crap about "hams" and "public service"..... you are all useless as far as that goes and you and I both know it).

Up Here in "the land of Lincoln" I'm having a blast with my radios.
I'd
like to "wave a hand" to everyone and will be listening on 27.555
USB(local
and DX).

I am and will always be a CBer..... and proud of it.

73's and good DX,
Jim

Since you don't have a Ham ticket, nor it seems a radio that tunes above 27MHz I just get a gut busting laugh out of who you think hangs out where. Of course seeing you're just a CBer you need to be reminded about the bands above 27MHz, like 6m, 1.35m, 70cm, 33cm, 23cm, 13cm etc. There is even work being done on the THz frequencies, i.e. there is a experimental laser telemetry transmitter on the AO-40 satellite for example Tim. If you want to try and poke fun at somebody educate yourself first, otherwise you're the one looking dumb. If somebody wants to limit themselves to one band, like 11m or 2m, well that's their problem. The rest of us don't, like me.

After a long night of making love this guy rolls over, was looking around when he noticed a framed picture of another man on the nightstand by the bed.

Naturally, they guy began to worry. "Is this your husband?" he inquired nervously.

"No, silly", she replied, snuggling up to him.

"Your boyfriend then?" he asked.

"No, not at all." she said, nibbling away at his ear.

"Well, who is he then?" demanded the bewildered guy.

Calmly, the girl replied, "That's me before the surgery."

What about advertising amps for sale in rrcb?

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture,
sell or
lease, offer for sale or lease (including advertising for sale or
lease), or
import, ship, or distribute for the purpose of selling or leasing or
offering
for sale or lease, any external radio frequency amplifier or amplifier
kit
capable of operation on any frequency or frequencies between 24 and 35

MHz.

> BTW, much
> the same way that you are free to voice your objections to the mere
> discussion of same, Frank.

"mere discussion", "slightly illegal".....Jeez, when you put it that
way, violation of federal law sounds like good citizenship.

> Ah, if it were only that easy to vote 'em out. It's like any other
> aspect of society. Enjoy the good and deal with the bad as best you
> can.

But you're NOT dealing with it. You're saying "I'm SLIGHTLY illegal so
I can't criticize people who are TOTALLY illegal".

Let's look at some of the asinine crap that's currently being
proliferated on so-called "tech" CB boards.

Re: 70kw

What does it take to run this amp 65kw?
Could it be done mobile?
If so what voltage would you use 12volts = about 6000amps

Reply Re: 70kw

LETS SEE IF WE CAN SHED A LITTLE LIGHT ON THIS SUBJECT.TO ACHEIVE THIS
POWER WE START WITH AN ALTERNATOR PLATE TRANSFORMER.DEPENDING ON WHICH
ALTERNATOR YOU USE YOU HAVE,YOU HAVE TO REMOVE THE RECTIFIERS AND
VOLTAGE REGULATOR FROM THE ALTERNATORS,THEN YOU WILL HAVE A THREE
PHASE UNREGULATED AC ALTERNATOR.WHEN YOU DO THIS THE IDLE VOLTAGE WILL
BE APPOXIMATELY 15 VOLTS UNREGULATED THREE PHASE AC AND WHEN YOU
ACCELERATE THE ENGINE THE VOLTAGE WILL RISE UP TO 20 TO 30 VOLTS
AC.WHEN YOU INTRODUCE THIS INTO A STEP UP ALTERNATOR PLATE TRANSFORMER
WHICH HAS A PRIMARY RATED AT 15 VAC AND SECONDARY AT WHAT EVER YOU
ORDER,USUALLY AROUND 2000 TO 5000 THREE PHASE AC OUT.NOW SINCE THE
ALTERNATOR IS UNREGULATED AND THE VOLTAGE WILL RISE AND FALL WHEN YOU
ACCELERATE,SO WILL THE SECONDARY OF THE TRANSFORMER.THEN YOU SIMPLY
BUILD A RECTIFIER AGAIN AND YOU HAVE HIGH VOLTAGE DC TO SUPPLY YOUR
BROADCAST TUBE.SOME TUBES HAVE 7.5 VDC FILIMENTS SO IF YOU RUN THEM IN
PARALLEL YOU CAN USE A DC ALTERNATOR TO LIGHT THE FILIMENTS.AND
REMEMBER WHEN VOLTAGE INCREASES CURRENT DEMAND DECREASES.NOT ONLY DOES
THIS WORK I HAVE PERSONALLY SEEN AND HELPED BUILT SEVERAL.THE RF WAS
SO INTENSE THAT THE HAIR ON MY ARMS AND HEAD WAS STANDING UP.AND ONE
CB OPERATOR HAD HIS RADIO DISCONNECTED AND IN THE TRUNK.HE BROUGHT IT

TO ME TO BE REPAIRED AFTER THE SHOOT OUT AND IT LOOKED LIKE LIGHTNING HIT THE RF SECTION,AND IT WORKED FINE TILL HE ARRIVED AT THE SHOOT OUT.I ALSO WORK ON SOME OF THE RADIOS HOOKED TO THESE UNITS,SO IVE SEEN THEM FIRST HAND.

Hi Sparky:

>Subject: Re: Why such Hate???
>From: sparky@cet.com (Sparky)

>Your bias is heavily biased against those that confront illegal
>operators. Why?

Because are they really here to protect the
rights of otheres or trolling? The later of course, otherwise wouldn't they become an
offical representative of the FCC. NO, they
are not here to do anything but throw stones at the bee hives.

>The buzzing you hear is the result of the continued trashing of the
>Citizen's Band and other parts of the radio spectrum by morons that
>have abandoned the entire concept of radio communication in favor of a
>king-of-the-hill mentality. If these people could behave themselves
>there would be no "George" or "Voobner". You are confusing the cause
>with the effect.

So you are condoning vigilantes then? I
hope not, because that could be a very dangerous thing when they have "YOU"
confused with someone else and start
pointin you out as some sort of criminal.

>in case you missed many previous posts, illegal
>operation is a federal offense carrying a typical fine of several
>thousand dollars, up to a maximum of $17,000. That's not petty. You
>are also failing to realize the nature of the radio spectrum as a
>limited resource; i.e, if you are locked in a room with someone else,
>you certainly don't want them doing something that will offend you, or
>perhaps worse. If you let them get away with it they will just
>continue.

So My husband and I (we've been married and seeing each other since High School)
Running or export radios and 150watt linears should be worried? Since High School we used the CB, and while there
usaully a agitator here and there, there has never been any sort of scenario you have painted in out comunity. That also doesn't mean that they or even you could go on this tirade of illegal illegal illegal. It just
makes them like children to me.

>Funny you should draw an analogy with Vietnam. I missed that one, but
>I have a direct experience with more recent events. I am a Beirut vet.

Good for you, and I hope that you are
OK and have gotten over any hard times you had. My father was a Viet Nam Vet
and to this day he will not utter aword about it. But again, aquainting
terrorism
with illegal cb, well you might as well make
smoking a $17,000.00 fine, because it kills
more people in one year than any linear/export radio has in the life time of CB
radio service.

Most of the "magnetic loop antennas" I have seen tend to be very narrow
banded for H.F. use. A change in frequency of a few KHz, or lets say one
channel on CB - 10KHz, may require retuning to get the SWR down to a safe
range for the radio. The designs I see often include a remote means of
tuning, i.e. a motor driven capacitor to do this.

For some examples of homebrewed magnetic loop antennas click on the URL's
below:

Here's an analogy I call the "community swimming pool".

Picture an OLYMPIC SIZED SWIMMING POOL. A sign on the pool says "THE CITIZENS BAND". It's crowded. Lots of people are in the pool. Toward one end of the pool a group of guys are defecating and urinating in the pool. Many people notice this, and quite a few leave the pool in disgust. Whenever someone leaves, the men laugh like hyenas and congratulate themselves.

Me: "Hey you guys! Please don't do that. You're ruining the pool for all of us!"

Guys: "Ha ha! F*ck you, pal. No one's complaining"

Me: "Ugh. This water is saturated with excrement. Doesn't anyone care?"

Bert: "Hey Aaron, ease up. Everyone farts in the pool once in a while. It can't be helped".

Me: "Yeah but they're not farting, Bert, they're defecating and urinating in the pool. They have rules forbidding that, and for good reason".

Tim Nebo: "There hasn't been any lifeguard here for years. That means there are no rules anymore. Don't be a baby, Aaron. We like the pool the way it is"

Train: (He takes a big crap in the pool. A disgusting, smelly LOG bubbles up to the surface) "It's fun! You should try it! Hahahahahah!"

Tim Nebo: "Good one, Train! Hahahaha!"

Bert: (whispers) "Psst. Aaron. Lemee show you a little secret".

(Bert leads Aaron over to a smaller pool. It's not as crowded. There is a sign on it that says "FREQUENCIES ABOVE 27.405 AND BELOW 26.965.

US GOVERNMENT AND PRIVATE USE ONLY")

Bert: "This is where the smart people go".

Tim: (joining them) "Yeah, let's hop in"

Me: "Guys, this is private property. We're not supposed to be here. What if the owners come back?"

Bert: (grinning) "They see us and they run away. It all works out fine, heh heh"

Me: "No thanks. I'm not into trespassing. You guys should keep out of it too"

Bert: "But we wanna swim. And the other pool is all smelly and ruined!"

Tim: "Yeah! It's our right to swim! Where are we supposed to go?"

Me: "Ever think of cleaning up the other pool?"

(Puzzled looks from Tim and Bert)

Linda McGrath: "This Aaron guy is a TROUBLEMAKER!"

Bert: "Yeah, he's an AGITATOR"

Tim: "Let's GET RID OF HIM!"

I'm sorry George or what ever your name really is, I am not a troll, you and
Aaron are the trolls throwing stones at bee hives.
My husbands name is Bill, this is his account, so you have a problem with him
now too? I'll talk radio all day, we love the
cb radio, it just seems that you and Aaron and I'm begining to think Sparky are
here
just to give people a hard time. If you want
to talk about radio, please feel free to dazzle us with your expertise on the
subject, but I have not seen you or Aaron
do anything but call people names, make accusations and just plain act like
little children. I have to go now, the youngest needs his diaper changed, I
think yours needs a changing too.
Linda
>Linda Bil who ever you are eat shit and die no one want to hear your troll

It sounds as though it's you
throwing Baby Ruth Bars into
the pool so that you can claim
you cleaned it up all by yourself
without any help from the FCC.
Again Aaron claims that all these
people are the reason that society
has gone to H*LL and a hand Basket
because they either talk or use a linear
or an export radio, who was that fictional
persona that used to go around charging
windmills?

Linda (Mother and explaining to her
children that she doesn't want them to grow up like George & Aaron)

Snipped for the betterment of soceity.

you know....jim.....we get reports like this all of the time, yet we are constanty encouraged to join the ranks of the hammies.....you know, i remember several years ago i met a old ham guy and we were talking, and i was interested naturally in linears....well to make a long story short....when i brought up the subject, he gave me a dirty look and basically said that i had a long way to go before i started messing with those....well, i figured the hell with that attitude....i am a grown man, and i do what i want, and if i ask somebody a question, i don't need a freekin lecture about shit.....just tell me if you can help me, or not.....no sweat.....but there are so many of them , just like this.....think you have to jump hurdles before you can do what you want.....well piss on that.....back several years ago, there were several hams that hung around the cb band and talked and we carried on many a late night conversation just about anything.....and i always wondered why they hung around the cb band with us 'lowlifes'....well the truth be known, they were there for probably the exact same reasons you stated.....just too damn many stuffy and tight assed types on the ham bands,.....a few years ago i did some work for a guy who happened to be a ham...i saw the equipment in his house...so i wanted to talk to him about stuff, so i asked his son about things before i brought anything up...well that was a good move, because come to find out this guy was one of those guys who rode around trying to bust people and rat out people for this and that.....a real tight ass.....and the real bummer about it all, is this guy did all of this and he had a damn good looking old lady... needless, to say, i myself, under those conditions would find better ways to spend my evenings.....no doubt about it.....sdj in the bighorn is back quiet.....

This is good.....take the time to read it.....

ï¿½And we said OKï¿½

Billy Graham's daughter was interviewed on the Early Show and Jane Clayson asked her "How could God let something like this happen?" (regarding the attacks on 9/11).

Anne Graham gave an extremely profound and insightful response. She said "I believe God is deeply saddened by this, just as we are, but for years we've been telling God to get out of our schools, to get out of our government and to get out of our lives. And being the gentleman He is, I believe He has calmly backed out. How can we expect God to give us His blessing and His protection if we demand He leave us alone?"

In light of recent events...terrorists attack, school shootings, etc. I think it started when Madeleine Murray O'Hare (she was murdered, her body found recently) complained she didn't want prayer in our schools, and we said OK.

Then someone said you better not read the Bible in school... the Bible says thou shalt not kill, thou shalt not steal, and love your neighbor as yourself. And we said OK.

Then Dr. Benjamin Spock said we shouldn't spank our children when they misbehave because their
little personalities would be warped and we might damage their self-esteem. We said an expert
should know what he's talking about. And we said OK. (Dr. Spock's son committed suicide)

Then someone said teachers and principals better not discipline our children when they misbehave. The
school administrators said no faculty member in this school better touch a student when they
misbehave
because we don't want any bad publicity, and we surely don't want to be sued (there's a big difference
between disciplining, touching, beating, smacking, humiliating, kicking, etc.). And we said OK.

Then someone said, let's let our daughters have abortions if they want, and they won't even have
to tell their parents. And we said OK.

Then some wise school board member said, since boys will be boys and they're going to do it anyway,
let's give our sons all the condoms they want so they can have all the fun they desire, and we
won't
have to tell their parents they got them at school. And we said OK.

Then some of our top elected officials said it doesn't matter what we do in private as long as
we do
our jobs. Agreeing with them, we said it doesn't matter to me what anyone, including the President,
does in private as long as I have a job and the economy is good. And we said OK.

Then someone said let's print magazines with pictures of nude women and call it wholesome, down-to-earth
appreciation for the beauty of the female body. And we said OK.

And then someone else took that appreciation a step further and published pictures of nude children and
then further again by making them available on the Internet. And we said
OK.....they're
entitled
to free speech.

Then the entertainment industry said, let's make TV shows and movies that promote profanity,
violence,
and illicit sex. Let's record music that encourages rape, drugs, murder, suicide, and satanic
themes.
And we said it's just entertainment, it has no adverse effect, nobody takes it seriously anyway,
so go
right ahead.

Now we're asking ourselves why our children have no conscience, why they don't know right from
wrong,
and why it doesn't bother them to kill strangers, their classmates, and themselves.

Probably, if we think about it long and hard enough, we can figure it out. I think it has a great deal
to do with "WE REAP WHAT WE SOW."

Funny how simple it is for people to trash God and then wonder why the world's going to hell.
Funny how
we believe what the newspapers say, but question what the Bible says. Funny how you can send
'jokes'
through e-mail and they spread like wildfire, but when you start sending messages regarding the
Lord,
people think twice about sharing.

Funny how lewd, crude, vulgar and obscene articles pass freely through cyberspace, but public
discussion of God is suppressed in the school and workplace.

Funny how when you forward this message, you will not send it to many on your address list because you're
not sure what they believe, or what they WILL think of you for sending it. Funny how we can be
more worried about what other people think of us than what God thinks of us.

Pass it on if you think it has merit. If not then just discard it... no one will know you did.
But,
if you discard this thought process, don't sit back and complain about what bad shape the world
is in!

That's funny I used to run into the same snobs on 11 meters. The most amusing thing was to listen to these snobs downgrade each other by what mode and frequency they operated on. The snobs that operated legal ssb looked at Am'er as bunch of low life's. Then these assholes migrated out of band. So anyone who operated 1-40 are bunch of low life's. CB has just as many if not more silly little snobs and as for ham radio snobs remember one thing. Most ham radio operator's license after 1975 got their start in CB radio. So where were these snobs hatched?

Since you don't like ham radio, send your license in to the FCC have it terminated. If you even have one. Show the newsgroup a good demonstration of your convictions!

Packet radio, SSTV and FM dx on 11 meters, Sure sounds like a want to be ham to me.

Can't say I disagree, unfortunately. And with a Whiskey Alpha you've been around nearly as long as I have. And if you live outside of a metro in LincolnLand, it is a hard thing to beat although I have in several places. Always thought that if Lincoln hadn't been buried they'd have him stuffed, mounted, and rotating in a public square in Springfield.

>Prob is that legal CBers must either live with your 30 watts or
>increase their own power to overcome it.

Innaccurate statement.

>What about advertising amps for sale in rrcb?
>
>FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture,
>sell or
>lease, offer for sale or lease (including advertising for sale or
>lease), or
>import, ship, or distribute for the purpose of selling or leasing or
>offering
>for sale or lease, any external radio frequency amplifier or amplifier
>kit
>capable of operation on any frequency or frequencies between 24 and 35
>MHz.

That crosses the boundary of "discussion" and enters the realm of "committing"
a FCC rule violation, right? Keep grasping, Aaron.

>"mere discussion", "slightly illegal".....Jeez, when you put it that
>way, violation of federal law sounds like good citizenship.

Nice try, but the subject is still the "freedom to discuss." There's plenty of
things that one might argue as objectionable subject matter, but in an open
forum, (Such as a NG) you are free to either take part in a discussion (Read
thread.) or NOT. Before you mention "good citizenship," just remember; Your
posts have been pegged as nothing more than troll material. So please don't
pretend that you're the champion of the "legal" CBer. You're just in it
for...jeez, I guess there's a multitude of reasons one might troll a NG.

>But you're NOT dealing with it.

Don't you wish that were the truth. This fmr. "freebander" has turned more
"freebanders" into EX-"freebanders" than your approach ever will. Your approach
generates NG threads entitled 'Aaron Voobner is a Fake Trolling Liar' and
'Another Misguided Troll Is Aaron Voobner.' Do you really believe that YOU are
"dealing with it?"

>I'm SLIGHTLY illegal

Sorry to disappoint you, Aaron. I run a perfectly legal station.

>so
>I can't criticize people who are TOTALLY illegal"

"kilowatt Charlie" and 10-meter intruders are at the top of my "bad guy" list.

>-A

Yup.

You know, Aaron. This analogy might be kinda cool...if it were actually THAT bad on the band.

>Me: "Ever think of cleaning up the other pool?"
>
>(Puzzled looks from Tim and Bert)

This would be the funny part...as if YOU ever did much to "clean" the other pool. These "naratives" have the look of a desperate cry for attention. My e-mailbox is always open.

You were, little troll. But, you seem to relish being belittled by members of the NG to such a degree that you keep changing nics. Like I told you before, I am not killfiling an entire domain to keep from reading posts from one little troll. Can you remember that statement now, or has your Ritalin not started working yet?

BTW, "thougth" is not spelled that way. See if you can remember how to spell it properly. If you can't, I'm sure Frank can help you out. (He has a list of big words he too has trouble with)

Sure I did. I wrote letters in support of HR2341, which allows local cops to come in and enforce the "absentee lifeguard's" rules. I encouraged eBay to keep the turd-makers tools out of circulation. And I continue to remind people that the turd-makers deserve no respect -- either "in" OR "out" of the pool.

>These "naratives" have the look of a desperate cry for attention. My
>e-mailbox is always open.

You mean to say these narratives actually reach people via genuine humor and simple, easy to understand parables.

Expect more of them.

Although I only work 2 meters through one of the ports on the N2HJD repeater here in Rochester, NY, I do work a few 2 meter folks. I'm invariably on 440 FM. The conversations are many and varied. They have ranged from a call from a good friend, WB2KAO, asking for a ride (which I was very glad to help him out with - he's the guy who some 39 years ago pushed me into getting my general ticket), to conversations concerning propogation - from VLF to UHF. One morning, about 3 AM, I ran into an interesting guy and had a most interesting discussion. We had a good discussion on the subject he teaches at the University of Rochester. He is a professor of theoretical physics. Although there certainly will always be both good operators and lids, I think I have had more interesting dialogues on amateur radio than CB. I had a ball with CB, but it was limited to bunny hunts (a LOT of fun, however). I have a feeling that you, like many others on both sides of the fence, are using a paint brush that may be a tad wide. BTW, I've been known to switch to F2 emission (or whatever you may call it today) on the repeater too ... (briefly, very briefly, for the gentleman who insisted upon the importance of Morse).

Maybe something has escaped your perceptions: who have I accused that
hasn't admitted to illegal operation? Not only that, how can anyone be
considered a vigilante just by posting in a newsgroup? I cannot
enforce any law just by posting: I can't impose fines, I can't
incarcerate, I can't confiscate property, etc. But I CAN rebuke much
of the disinformation being promulgated in support of lawbreaking, I
CAN tell of the very real consequences of such illegal acts, I CAN
make the "hobby" of RF piracy a little bit more distasteful to someone
sitting on the fence, and I CAN provide moral support for those that

are interested in using a CB for the purpose it was intended.

>>in case you missed many previous posts, illegal

>makes them like children to me.

If you have two children then maybe you should be worried -- the FCC
can take a pretty good chunk out of your childrens' education. Just
because you want to play with your toys. Jerry keeps talking about a
big crackdown in the near future. Maybe it will happen and maybe it
won't, but are you willing to take that chance? Is running power so
addictive that you can't quit? Ever think about studying for a couple
hours, spending a little pocket change and getting a license? Or how
just shell out a few more bucks for your own freq on GMRS? How about
learning how to use what you have legally available? Is that such a
hard thing to do that you would take a risk with such expensive
consequences? Seriously, I would like to know.

>>Funny you should draw an analogy with Vietnam. I missed that one, but

>terrorism
>with illegal cb, well you might as well make
>smoking a $17,000.00 fine, because it kills
>more people in one year than any linear/export radio has in the life time of CB
>radio service.

No worse than you associating illegal CB with Vietnam. Actually, I
don't know how you could make the analogy because you weren't there.
But I guess that's between you and your conscience. Regardless, do you
know what the most important weapon is on the battlefield? The radio.
I understand the importance of being responsible with such a powerful
device. Did you know that an entire country was overthrown during the
Eisenhower administration without a single shot being fired, and it

was due primarily to the use of radio? You aren't playing with a toy.

BTW, it's obvious that you didn't learn a thing from your father. He goes off to a foreign land to fight in the name of the US... for what? So you could sit on your tush and scoff at the same country that he risked his life for? You sound like that twit at nonameamps: he sets up shop building some of the most offensive splatter-boxes just a few miles away from the US Capitol, and does it in a location owned by an honest-to-God war hero. Turns the stomach.

>installed in or near Cherry Hill, NJ.
>
>Thanks,
>
>Jim.
>

There's a truck stop in the area of Exit 7 on the NJ Turnpike. I am sure that would be a good start. The other option, to buy a CB and have it installed would be to visit Newport Bay Electronics on Rt 18 in East Brunswick - a bit of a drive, but might be your best bet. There's also a place called CB Radio Exchange in either South Plainfield or Piscataway (forget the town), off of Rt 287 you could try, but that guy doesn't install them, only sells 'em. Newport Bay will install them.

Sounds more like a guy with a pretty heavy dead investment when the spots drop. Packet is pretty dead these days and with SSTV are little more than plug-n-play thru the audio ports of an SSB transceiver. The FM could be but probably is not in practice a bit more impressive.

What some guys will do to avoid a code test, sheesh.

Dick, N&#65533;BK, the one and only Velvet Codpiece.

Yes, maybe. It all depends on the size of the loop etc.

>it is possible to make an
> automatic tuner for this

That could be a bit complicated, and would require the use of of some sort of "processor", and servo controled motor for the loop tuning capacitor.

>,or is this to difficult for a simple DIY cb-er?

Is it too hard for a CBer? I wouldn't think so for a "manually adjusted antenna" if you're handy with hand tools. One design I saw used a simple 12 VDC motor run through a gear reduction box coupled to the shaft of the matching capacitor. By switching the polarity of the DC, using a simple double pole double throw switch, the guy could run the motor in either direction while monitoring the SWR from the radio end of the line. I don't think I ever saw a homebrewed version of an automatically tuned model.

Of course there could be another solution to your problem as well. If your are operating at legal CB power levels, which for lack of anything else to assume, there are some low power random/long wire tuners. These units are designed for what is called QRP use, generally in the 5 to 10 watt transmitter range, perfect for CB use, and function completely automatically. While they may cost a couple of bills, they are mostly a plug and play solution.

For example check out the URL below for the "Z-11 QRP Tuner"

http://www.ldgelectronics.com/z-11.html

Good luck.

Ah Twisted, how sweet it is when your own words come back to bite you like
the below.

"Of all the DX and countries I have ever
heard, I find myself embarrassed
for our own operators here in the
states. The high profile spectrum
splatters usually get their due,
one way or another. Unfortunately, for
many fine operators and listeners it
doesn't come soon enough."

Quoted from Twistedhed's essay written for a past issue of:
http://sporadicwaves.tripod.com

Also quoted from Twistedhed's essay written for the same past issue of
Sporadic Waves.

"I can't seem to shake the old
adage that keeps playing in
my mind, >If you are not part of
the solution,you are part of
the problem.<"

Quoted from Twistedhed's essay written for a past issue of:
http://sporadicwaves.tripod.com

Seems to me like you agree with Sparky, or now you want to back peddle, or
just trying to stir up the pot a bit to see what kind of reaction it
generates.

Hi all,
well i just joined this thread half way through so havent got the full
story.

To me it doesnt matter whether your on CB or have an A/B or novice
ticket. To me its all about having a good chat,passing knowledge and
experience around and meeting new people. The medium through which
that can be done for me may be over a pint of Guiness,on a cb,on a
HF/VHF/UHF tranciever or via the internet.

I really can't understand the rivalry between various factions.

I started as a straight40 am illegal cb'er,i progressed to illegal ssb
then a B licence and now have had an A licence for maybe 6 years or
so ??. I listen more than talk and only talk/jump into conversations
when i have something useful to add. I dont blather on about sig
strengths and all that but some do.

In the end its a use it or lose it situation. Id rather have two old
duffers going on about sig strengths and quality on 2m fm than have
the whole band clear and the DTI's greedy eyes resting upon it!!.

So enough of this rivalry people!

>Frank continued to make friends with:
No worse than you associating illegal CB with Vietnam. Actually, I don't know how you could make the analogy because you weren't there.<<

Neither were you, so you are just as clueless, but she didn't make that distinction,,,it was you and the other kennel club members of Lelnad and George that made the original ridiculous comparison between cb and terrorism. George called himself part of a Jihad, Lelnad made many threats and calls for violence against cbers, and you insult anyone that shines a light on your antics.

>But I guess that's between you and your conscience. Regardless, do you know what the most important weapon is on the battlefield?
The radio.<<

The RADIO? THE RADIO? LMMFAO! I thought you claimed to be a Marine? Thta's a freakin' insult to all Marines... IF it is even remotely true, you most certainly went to boot camp at the Holllywood facility, as you NEVER came through Paris Island. A real Marine doesn't have to be as cocky as you present yourself. A Marine isn't uncertain or unsure of himself and a Marine doesn't resort to insults and petty name calling when he knows he is right if another is incorrect, and lastly a Marine doesn't antagonize when he is stumped, he improvises.
A real Marine would never NEVER claim his radio was his most important piece of gear, (You should have learned this well before fire school) even if you were a REAL "sparks."

>I understand the importance of being responsible with such a powerful device. Did you know that an entire country was overthrown during the Eisenhower administration without a single shot being fired, and it was due primarily to the use of radio?>>

Each time we elect a different party president the country is "overthrown" without a single shot being fired.

Beware Landshark is not suspect but confirmed to post in alt.sex.ts NG's, as
anyone can clearly see he has no technical background and just hangs in here
trolling and waiting for little boys perhaps. Why havent any of the ISP's
done anything to me you stupid son of a bitch maybe your complaints are
unfounded , border on delusional and have no basis for fact. Giganews go cry
to them and tell them i am putting there name in my header you stupid
jackass thats who comcast uses for there NG feed perhaps thats why they
laughed at your complaints. Aol we all know i don't have a aol account don't

we? So complain to them tell them old George Busch is being mean to you. Since they can see all your past post when i send them the file and show them how much of a sniveling cry baby you are. I htougth I was killfiled why does this guy have a hard on foor me , Ill tell you why he likes men plain and simple. And he knows I am every womens dream and every mans night mare. Landshark when was the last time you made a post related to CB radio? Crying about old me does not constitiute talking about cb? Did you get that box of hankies I sent you. I see your gonna need them and a box of depends.

twistedhed@webtv.net (Twistedhed) wrote:
Sparky wrote:
By golly, you figured it out! You have to stay within the limits of the
service or you are an illegal operator! Very good, twistie!<<

That is ridiculous. Many hammies talk on cb with their rigs and many
more DX on the freeband. This does not automatically strip them of their
license...there is a process by the FCC before they get warned before
they get warned before they get action taken.

>Are you saying that hams that are operating on the CB or freeloader
band with their ham gear are not operating illegally just because they
still have their ham license?<<

No, I refuted your false and inaccurate statement of " You have to stay
within the limits of the service or you are an illegal operator! " with
my own statement of....
"That is ridiculous. Many hammies talk on cb with their rigs and many
more DX on the freeband. This does not automatically strip them of their
license...there is a process by the FCC before they get warned before
they get warned before they get action taken."
To spell it out,,,,,,talking on the freeband if one is a hammie or
talking on the cb band with a hammie rig does not negate the license
status of a hammie, which is what your original statement actually
indicated.

>And BTW, advertising a CB amp is a federal offense all by itself, so
not only are some of them just talking about illegal activities,<<

Which is supported by the government and by the rights granted us as a
citizen of the United States......I know it's tough for you would-be
dictators to comprehend.

>Division.<<

Multiplication.

>some of them are actually committing offenses right in the newsgroup.<<

You know nothing of actions done outside this group other than what we
allow you.

>Wasn't 2.815 posted enough times for you to read it completely? I'm
sure someone here can post it again in case you forgot what it says. To
sum it up, just the act of ADVERTISING IT FOR SALE is illegal, so a

newsgroup post can actually be considered prima facie -- it is, in and of itself, the offense.<<

Doubtful, as you and your P.A.L.s would have taken advantage of it.

>I can't believe you misunderstood that the first 15 times...(well, ok, I can understand it, you were busy beating your dogs, right?) <<

The misunderstanding comes from your camp, continuously. In almost every post, you take another's sentence, post it and even quote it, then in your most cornfused and contrived manner, apply your own meaning to it and ask if it means THAT....
Comprehension should come way before mathematics. .

Nah, the dogs don;'t get beat, just let the coons take a small chunk out of their azz when yer trainin' them to hunt...makes 'em hungry and productive..even champions...if ya' know anything about blue blood breeding, check THE registry for top sportin' hounds...it's chock full o' Cooter Mae's blood.
My comments were directed at the topics, not posts for amps of sale. Nevertheless, you have accused many of being illegal based on their discussion, many of who have never posted an amp for sale.

>Open admission is usually considered to be pretty strong evidence. Have I ever accused someone of being an IO that didn't previously admit the same?<<

Yes.

>Is that also permitted under your "guides"? NO.<<

Talking of illegal activities? Why yes, it certainly is legal. As far as your claim of illegal activity taking place here,,,cite an example. Certainly nothing takes place here other than words being posted that agggravate you due to anal retentiveness and severe constipation.

>Pick any post that advertises an X-force, or Dave-made, or any other amp "capable of operation between 24 and 35MHz".<<

Ok, but it doesn't excuse your behavior and accusation towards those that have not advertised amps, if that is your sole act of justification.

>It is not an "act of justification" at all. You asked for an example and I provided...<<

Do a search on "justification" in the group..I am certain you would not be the least surprised to see whose favorite term that word appears to be..... The search results alone illustrate your hypocrisy.

>A simple solution would be creating another group -- alt.radio.cb.<<

Why? There is already alt.radio.cb.skip and alt.radio.pirate (and just to be redundant someone came up with alt.pirate.radio). They, as well as the rec.radio.amateur newsgroups, are certainly more relavent to what

these delinquents are doing.<

A "delinquent" is associated with a misdeed or offense.

>Very good, twist. I see this has been a productive morning for you. Now take all this stuff you have learned and go discuss it with your imaginary shrink.<<

Your patterns are old and tired and serve only to solidify your position and presence.

>And your arguments are improving.<<

Smokescreen and semantics, as you are refraining from insults and in return are actually capable of having a civil conversation about issues. You will find that your view of 360 degrees instead tunnel vision wil remain as long as your insults are kept to a minimum roar. As much as you parrot "cause and effect", one would have expected you to have already realized this.

> But you still need to work on your division/composition problem.<<

As far as division goes, I leave that to the lids...dividing cbers and hammies by status is their gig..as far as composition,,,
Yea, maybe so....my refund this year will only allow me to take two 3 week cross-country vacations instead of 4 two week vacations...maybe I should try to increase my composition output.

> > beam up around 65 feet defines it for me. The point is, what ever
> > defines it for you is OK.

Ok, 30 watts (Using a low pass filter, I hope?) into a directional
antenna high above the ground (& neighbors' appliances.) sounds good
to me. Uh oh, I forgot. That means that I'm endorsing freebanding,
illegal amplifiers, the legalization of "export" rigs, spousal abuse,
and beastiality (From 'Blazing Saddles': "Our women beaten and cattle
raped!") as well as disqualifying myself from the 'Voobner Foundation
Good Citizenry Award.'

> > There aren't a bunch of silly little people
> > with silly little minds defining what is acceptable for others.

NEGATIVE! There ARE a bunch of silly little people with BIG authority
in the form of the FCC that most certainly DO define what's acceptable
wrt radio services. It IS your choice as to whether or not you're
willing to deviate fromn their plan. As for "silly little
minds"...allocating a short distance land-mobile service smack dab in
a band that supports skywave propagation. Draw your own conclusions.

> > I have spoken with more interesting people on the freeband than one

There on both bands...somtimes "literally." There are also lids on
both bands.

> > The best part is that the conversation involves more than "type of
> > rig" or
> > "signal report" that is so common the the ham bands.

I have to say that since getting on HF, I have noticed this too. But
there are plenty of rag-chewing sessions around too. You've just got
to seek them out.

I agree that 11-meters can provide allot ot enjoyment, but it is not
without it's risks. An $8,000.00 NAL can leave a very unpleasant taste
in anyone's mouth. I won't go into severity codes, you know when
you've crossed the line into the danger zone. I've also read that

plenty of hams still provide lots of public service.

you have it right dick, i never did like to take test not even the ones in school when i knew i had all the required info memorized. for some reason i was always the type that studied a little harder than the others and made sure i learned what was being taught without ever really worrying about the grades i got. if i felt i knew something then i didnt worry about doing the homework or the silly shit that was supposed to be teaching it to me. if it was something i didnt know then i was always the most attentive and usually the one asking the questions. i guess the code test is the same way. i mean who cares about proving it to anybody as long as i can fire up my radio and call cq at a turtle speed on 27.500 and work a few guys from time to time. its not something i do alot of or try to make lengthy qso's with but it is fun to do and very often some of the most exotic stations on 11 meters that you'll rarely hear tx'ing in voice will answer back. i've worked several stations in indochina, alot in africa, and most of the old east block countries and plenty of others on 11 meter cw and it was all in great fun and all for my own enjoyment and without ever having to pass anybodies test or conform to anybodies rules. now call me what you want whether it be lawless, inconsiderate or whatever but one thing is for sure you will not be able to say i dont use my radios to there fullest potential and enjoy them a great deal at all times whether the solar cycle is in full blast or nonexistant it really doesnt matter because no matter what we still have a wide variety of colorfull people of all kinds to talk to whether its 10 miles or 10,000 miles away it doesnt really matter if you just enjoy talking on the radio for talkings sake like most of us do.

Hello, Lelnad. How do you figure I agree with Sparky? The article was
speaking of 27.555, which you intentionally snipped, and Sparky claims
that isn't cb.
All your reposts are snipped in a poor effort to make the original post
appear something it is not. That's your life's story, Lelnad...you live

through us.

> hammie rig is no longer a hammie.

They're not a CBer either since they are not using "type accepted" Part 95
equipment. But that is a topic for another discussion.

> >And BTW, advertising a CB amp is a federal offense all by itself, so
> >not only are some of them just talking about illegal activities,<<

> Which is supported by the government and by the rights granted us as a
> citizen of the United States......

Ah, no its not Twisted, advertising a CB amp for sale that is. The relavent
Federal Laws are listed below. Specifcaly read sections Part 95.317(a)(b)
and Part 2.308(a)(1). So as Sparky has said those even offering to sell
amplifiers that don't meet the FCC's certification requirement are in
violation of the law. THERE IS NO RIGHT to do as you suggest "granted us as
a citizen of the United States" for the likes of Davemade etc. and the sale
of amplifiers to non Hams. Like it or lump it Twisted, that's the law.

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS
COMMISSION (CONTINUED)

PART 97--AMATEUR RADIO SERVICE--Table of Contents

Subpart D--Technical Standards

Sec. 97.315 Certification of external RF power amplifiers.

(a) No more than 1 unit of 1 model of an external RF power amplifier
capable of operation below 144 MHz may be constructed or modified during
any calendar year by an amateur operator for use at a station without a
grant of certification. No amplifier capable of operation below 144 MHz
may be constructed or modified by a non-amateur operator without a grant
of certification from the FCC.
(b) Any external RF power amplifier or external RF power amplifier
kit (see Sec. 2.815 of the FCC Rules), manufactured, imported or
modified for use in a station or attached at any station must be
certificated for use in the amateur service in accordance with subpart J
of part 2 of the FCC Rules. This requirement does not apply if one or
more of the following conditions are met:

(1) The amplifier is not capable of operation on frequencies below 144 MHz. For the purpose of this part, an amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of being easily modified to increase its amplification characteristics below 120 MHz and either:
(i) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a point where 0 dB or less gain is exhibited at 120 MHz; or
(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without sustaining permanent damage to its amplification circuitry.
(2) The amplifier was manufactured before April 28, 1978, and has been issued a marketing waiver by the FCC, or the amplifier was purchased before April 28, 1978, by an amateur operator for use at that amateur operator's station.
(3) The amplifier was:
(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's station; or
(ii) Modified by the licensee for use at the licensee's station.
(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.
(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.
(c) Any external RF power amplifier appearing in the Commission's database as certificated for use in the amateur service may be marketed for use in the amateur service.

[54 FR 25857, June 20, 1989, as amended at 63 FR 36611, July 7, 1998]

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION

PART 2--FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND REGULATIONS--Table of Contents

Subpart I--Marketing of Radio-frequency Devices

Sec. 2.803 Marketing of radio frequency devices prior to equipment authorization.

(a) Except as provided elsewhere in this section, no person shall sell or lease, or offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any radio frequency device unless:
(1) In the case of a device subject to certification, such device has been authorized by the Commission in accordance with the rules in this chapter and is properly identified and labelled as required by

Sec. 2.925 and other relevant sections in this chapter; or
(2) In the case of a device that is not required to have a grant of equipment authorization issued by the Commission, but which must comply with the specified technical standards prior to use, such device also complies with all applicable administrative (including verification of the equipment or authorization under a Declaration of Conformity, where required), technical, labelling and identification requirements specified in this chapter.
(b) The provisions of paragraph (a) of this section do not prohibit conditional sales contracts between manufacturers and wholesalers or retailers where delivery is contingent upon compliance with the applicable equipment authorization and technical requirements, nor do they prohibit agreements between such parties to produce new products, manufactured in accordance with designated specifications.
(c) Notwithstanding the provisions of paragraphs (a), (b), (d) and (f) of this section, a radio frequency device may be advertised or displayed, e.g., at a trade show or exhibition, prior to equipment authorization or, for devices not subject to the equipment authorization requirements, prior to a determination of compliance with the applicable technical requirements provided that the advertising contains, and the display is accompanied by, a conspicuous notice worded as follows:

This device has not been authorized as required by the rules of the Federal Communications Commission. This device is not, and may not be, offered for sale or lease, or sold or leased, until authorization is obtained.

(1) If the product being displayed is a prototype of a product that has been properly authorized and the prototype, itself, is not authorized due to differences between the prototype and the authorized product, the following disclaimer notice may be used in lieu of the notice stated in paragraph (c) introductory text of this section:

Prototype. Not for sale.

(2) Except as provided elsewhere in this chapter, devices displayed under the provisions of paragraphs (c) introductory text, and (c)(1) of this section may not be activated or operated.
(d) Notwithstanding the provisions of paragraph (a) of this section, the offer for sale solely to business, commercial, industrial, scientific or medical users (but not an offer for sale to other parties or to end users located in a residential environment) of a radio frequency device that is in the conceptual, developmental, design or pre-production stage is permitted prior to equipment authorization or, for devices not subject to the equipment authorization requirements, prior to a determination of compliance with the applicable technical requirements provided that the prospective buyer is advised in writing at the time of the offer for sale that the equipment is subject to the FCC rules and that the equipment will comply with the appropriate rules before delivery to the buyer or to centers of distribution. If a product is marketed in compliance with the provisions of this paragraph, the

product does not need to be labelled with the statement in paragraph (c) of this section.
(e)(1) Notwithstanding the provisions of paragraph (a) of this section, prior to equipment authorization or determination of compliance with the applicable technical requirements any radio frequency device may be operated, but not marketed, for the following purposes and under the following conditions:
(i) Compliance testing;
(ii) Demonstrations at a trade show provided the notice contained in paragraph (c) of this section is displayed in a conspicuous location on, or immediately adjacent to, the device;
(iii) Demonstrations at an exhibition conducted at a business, commercial, industrial, scientific, or medical location, but excluding locations in a residential environment, provided the notice contained in paragraphs (c) or (d) of this section, as appropriate, is displayed in a conspicuous location on, or immediately adjacent to, the device;
(iv) Evaluation of product performance and determination of customer acceptability, provided such operation takes place at the manufacturer's facilities during developmental, design, or pre-production states; or
(v) Evaluation of product performance and determination of customer acceptability where customer acceptability of a radio frequency device cannot be determined at the manufacturer's facilities because of size or unique capability of the device, provided the device is operated at a business, commercial, industrial, scientific, or medical user's site, but not at a residential site, during the development, design or pre-production stages. A product operated under this provision shall be labelled, in a conspicuous location, with the notice in paragraph (c) of this section.
(2) For the purpose of paragraphs (e)(1)(iv) and (e)(1)(v) of this section, the term manufacturer's facilities includes the facilities of the party responsible for compliance with the regulations and the manufacturer's premises, as well as the facilities of other entities working under the authorization of the responsible party in connection with the development and manufacture, but not marketing, of the equipment.
(e)(3) The provisions of paragraphs (e)(1)(i), (e)(1)(ii), (e)(1)(iii), (e)(1)(iv), and (e)(1)(v) of this section do not eliminate any requirements for station licenses for products that normally require a license to operate, as specified elsewhere in this chapter.

(i) Manufacturers should note that station licenses are not required for some products, e.g., products operating under part 15 of this chapter and certain products operating under part 95 of this chapter.
(ii) Instead of obtaining a special temporary authorization or an experimental license, a manufacturer may operate its product for demonstration or evaluation purposes under the authority of a local FCC licensed service provider. However, the licensee must grant permission to the manufacturer to operate in this manner. Further, the licensee continues to remain responsible for complying with all of the operating conditions and requirements associated with its license.

(4) Marketing, as used in this section, includes sale or lease, or offering for sale or lease, including advertising for sale or lease, or importation, shipment, or distribution for the purpose of selling or leasing or offering for sale or lease.
(5) Products operating under the provisions of this paragraph (e) shall not be recognized to have any vested or recognizable right to continued use of any frequency. Operation is subject to the conditions that no harmful interference is caused and that any interference received must be accepted. Operation shall be required to cease upon notification by a Commission representative that the device is causing harmful interference and shall not resume until the condition causing the harmful interference is corrected.
(f) For radio frequency devices subject to verification and sold solely to business, commercial, industrial, scientific, and medical users (excluding products sold to other parties or for operation in a residential environment), parties responsible for verification of the devices shall have the option of ensuring compliance with the applicable technical specifications of this chapter at each end user's location after installation, provided that the purchase or lease agreement includes a proviso that such a determination of compliance be made and is the responsibility of the party responsible for verification of the equipment. If the purchase or lease agreement contains this proviso and the responsible party has the product measured to ensure compliance at the end user's location, the product does not need to be labelled with the statement in paragraph (c) of this section.
(g) The provisions in paragraphs (b) through (f) of this section apply only to devices that are designed to comply with, and to the best of the responsible party's knowledge will, upon testing, comply with all applicable requirements in this chapter. The provisions in paragraphs (b) through (f) of this section do not apply to radio frequency devices that could not be authorized or legally operated under the current rules. Such devices shall not be operated, advertised, displayed, offered for sale or lease, sold or leased, or otherwise marketed absent a license issued under part 5 of this chapter or a special temporary authorization issued by the Commission.
(h) The provisions in subpart K of this part continue to apply to imported radio frequency devices.

>I know it's tough for you would-be
> dictators to comprehend.

It seems more like your confused Twisted. You need to research the law before you start to flap your lips and make some wide sweeping blanket statements. Speaking about something is one thing, advertising is another, and not anywhere nearly the same thing.

> Turn on your 2 mtr rig and listen to the local repeater. How does the
> content of conversation differ than what is encounted on local AM CB?
> There are good operators and lids on both.

The content of the conversations I hear on the local repeaters in my area never include profanity, intentional jamming (occasionally people double with each other, when there is a group), or annoying echo devices. The CB conversations in my area generally include all three.

>
> The term CBer is a broad term. To some it means conversing on CH 19.

> watts". To me, a nice Galaxy running 30 watts pep into a three element
> beam up around 65 feet defines it for me. The point is, what ever
> defines it for you is OK. There aren't a bunch of silly little people
> with silly little minds defining what is acceptable for others.

So, your definition of CB is to operate with 7 times the legally allowed wattage, with an antenna that is three times higher than the law allows. So, should I define being a ham as running over 10,000 watts into an antenna on a 600 foot unlit tower?

>
> I have spoken with more interesting people on the freeband than one
> could ever hope to encounter on the ham bands. I have observed more

Doubtful. No ham I know defines their self-worth in terms that you
describe. If you don't like the clubs, don't join. I don't belong to any
club, yet I still manage to have fun with ham radio.

Using your imbecilic logic, a hammie talking on a cb channel with a
hammie rig is no longer a hammie.

>They're not a CBer either since they are not using "type accepted" Part
95 equipment. But that is a topic for another discussion.<<

No, it's quite pertinent, as freeband and cb quite often go hand in
hand.

>>And BTW, advertising a CB amp is a federal offense all by itself, so
not only are some of them just talking about illegal activities,<<

Which is supported by the government and by the rights granted us as a
citizen of the United States......

>Ah, no its not Twisted, advertising a CB amp for sale that is.<<

(sigh) Yea, I know it's illegal to sell an amp, Lelnad, and your
half-assed attempt at snipping and cutting my posts to make it appear
otherwise is a tactic you have worn out. It was slightly effective in
your infancy and forging stages here, but since then you have come to
allow all present to know you for what you actually are, an angry,
self-conscious, no-esteem lid.

>The relavent Federal Laws are listed below. Specifcaly read sections
Part 95.317(a)(b) and Part 2.308(a)(1). So as Sparky has said those even
offering to sell amplifiers that don't meet the FCC's certification
requirement are in violation of the law. THERE IS NO RIGHT to do as you
suggest "granted us as a citizen of the United States" for the likes of
Davemade etc. and the sale of amplifiers to non Hams. Like it or lump it
Twisted, that's the law.<<

Only I never "suggested" that, it's only your poor communication and
comprehension skills manifesting and presenting a problem for you. I
even stated the opposite, telling Sparky I WASN'T referring to amps or
sale. Take a deep breath and go read your bible, er... I mean my
articles.

--

I know it's tough for you would-be
 dictators to comprehend.

>It seems more like your confused Twisted.<<

Not at all. Your actions and intentions have become impotent and it pains you greatly.

>You need to research the law before you start to flap your lips and make some wide sweeping blanket statements. Speaking about something is one thing, advertising is another, and not anywhere nearly the same thing. <<

Whic I already educated you on once before when you cried about the "journalistic integrity" of Pop Com. when they were talking of keydowns....glad to see some retainment value in your angry world, but really glad you have been paying attention, even when you may not realize it.

Tim wrote: I've worked several stations in indochina, alot in africa,
and most of the old east block countries (snip)<<

And therein lays the allure for many of us. Getting on the hammie bands
and doing it all the time wouldn't make it nearly as fun as it is to do
it when the DX is just right with a barefoot rig, many (IMHO, it would
be MOST) times with less wattage output than a hammie rig.

Perhaps so. Certainly we have both encountered, you in 50 days me more like 50 years, pretty much everything he alludes to at one time or another. I managed to develop an oversized 'Ignore' gland and did and continue to do my thing but the attrition rate is a bit high.

The point is that in one of the 485 or so hobbies called Amateur Radio, you are going to encounter the human race at work much like you encounter in here so live with it or don't -- the world does not really care which. Over the years I gave up RC flying because of the local club, I have been a member of several clubs which ranged from the Politburo to terminally useless but was fortunate enough to find a group of kindred souls that took a club that was pretty non-descript and built the largest gang of thieves and brigands in St. Louis -- mostly by recruiting people who had an identity outside the hobby.

If you live in East Kumquat Illinois, and believe me a lot of the state would have to shape up to be East Kumquat, the range of people you meet is smaller and the corresponding power of the terminally anal is increased on mouthpower alone. Macht's nichts whether it is the radio club, the Moose, or the Lady's Doily Society. So I am quite happy to take him at his word.

Around Omaha I was offered any number of cheap 2-meter FM rigs when I got to town and soon found out why -- the radio cops and a few stupid blood feuds have damn near killed the band here and the local coded hams have taken up 10 and 12 for local stuff to avoid the Lifer Techs. The closest I have come to VHF is 223 simplex on the Sunday bus route between some of

us so we can laugh at our fellow drivers outside of the 461 bus radios.

Yeah, I can believe him all right. He obviously does not have a lot of fortitude, first for continuing to renew (or upgrade even, one written) when he has a bad case of the saddle chafe, and second for settling for a bad copy of real radio. He has made mountains out of what is usually a collection of very small molehills but hey, I don't know his desires or his circumstances.

Bert,

The reasons for allocating 27 MHZ for CB have been addressed here many times. There are 2 main issues: 1) equipment available in 1958 at a reasonable cost. 2) The
attitude of the public in that era.

There already was a "CB" up on UHF, but it failed due to various factors. People were
more inclined to obey the law, and the idea of Joe Sixpack using a radio was a new idea.
People still regarded radio as a "new-fangled" gadget that cops, hams, and airplanes used. I can even remember when people would slow down on the highway at the sight of any kind of antenna on a car. So when the Feds came along and opened up this "mysterious" mode of communications to the public, it was all new along with the rules that came with it. People were more than willing to obey those rules for the privilege of
using a radio to keep up with the family or run a little business. After all, as far as hearing
others far away, you still had/have a choice: just because you can hear them doesn't mean you have to talk to them. Like anything else, familiarity breeds contempt. so as the
new wore off, people began to test the limits. Attitudes changed, not only about radio, but regarding other things as well.

If there had been cost-effective, affordable UHF radios in 1958 that the public could use, I am sure they would have done that. But, again, UHF was still a "frontier" band, so
to speak, and equipment just wasn't up to public consumption. You know the rest.

>of my home and trespassers off my property doesn't mean I'm going to
>attend the police academy and join the force.

No, why else are they here and only here. If they were truly concerned they would become an official for the FCC, so they can bust all these people. Otherwise they are just trolling and trying to start trouble. If you really felt so strong about the rules, join the FCC forces and start enforcing them for real.

>
>Maybe something has escaped your perceptions: who have I accused that
>hasn't admitted to illegal operation?

So they operated illegally, does that
justify the constant harrasment be them?

> Not only that, how can anyone be
>considered a vigilante just by posting in a newsgroup?

Ask Aaron and George, they seem to think that if they keep saying it enough it will become true.

> I cannot enforce any law just by posting:

Correct

>I can't impose fines,

Right

>I can't incarcerate,

Right again

]>I can't confiscate property, etc.

Right again
>
But I CAN rebuke much
>of the disinformation being promulgated in support of lawbreaking,

So when someone says I was freebanding the other day and made contact with a person in Australia. They of course very nicly remind him that it's illegal right? He responds with, "Yeah, I kjnow so what?"
And they nicly respond with "well just to remind you the rules here" I thinks if he said he knows its illegal, then he knows and of discussion.

> I CAN tell of the very real consequences >of such illegal acts, I CAN >make the "hobby" of RF piracy a little bit >more distasteful to someone >sitting on the fence,

So your saying for the past couple of months the very people that are being constantly barraged with obscene post are just "Fence sitting"? They seem to know what will happen to them if they are caught, so why do they constantly bother them.?

> and I CAN provide moral support for those that are interested in using a CB for the purpose it was intended.

Like keep handing them more rocks to throw at the bee hives?

>
>If you have two children then maybe you should be worried -- the FCC >can take a pretty good chunk out of your childrens' education. Just >because you want to play with your toys.

Thank for your concerns, but were not worried.

> Is running power so
>addictive that you can't quit?

Funny you should mention that, is this newsgroup the same way for Aaron & George?

>Ever think about studying for a couple
>hours, spending a little pocket change and getting a license?

No not really we're quite content right now thank you.

> Or how
>just shell out a few more bucks for your own freq on GMRS? How about >learning how to use what you have legally available? Is that such a >hard thing to do that you would take a risk with such expensive >consequences? Seriously, I would like to know.

Because, I know that unless you are causing trouble, running gobs of power the chances of you getting hit by lighting are far greater than the FCC.

>No worse than you associating illegal CB with Vietnam. Actually, I >don't know how you could make the analogy because you weren't there.

Neither were you, by your own admission

>But I guess that's between you and your conscience.

I sleep very soudly at night.

> Regardless, do you
>know what the most important weapon is on the battlefield? The radio.
>I understand the importance of being responsible with such a powerful
>device. Did you know that an entire country was overthrown during the
>Eisenhower administration without a single shot being fired, and it
>was due primarily to the use of radio? You aren't playing with a toy.

So you are saying my export radio, 150 watts and conversations with friends and family are endangering the USA? Our using the radio is going to cause the government to be overthrown? Huh, intersting <G> Yeah, ok.

>
>BTW, it's obvious that you didn't learn a thing from your father

Please, don't flatter yourself. I learned a lot from him and continue to everyday, so your insults to his past fall on deaf ears.
Have a nice day Sparky.

> Whole day's work in one swell foop.

It was an unquoted line directly from your post Dick. The one about the code. The comment about being an Advance Class ticket holder came directly from the original posted message. If your code comment was directed to Tim, and not an indirect comment about the original poster, which it looked like it was to me since you mentioned "more like a guy" in the opening sentence of the main paragraph. Otherwise I would think you would have address Tim in a more direct manner. So the following code comment appeared to be related to the person indirectly referred to in the prior paragraph.

You can say that again. For example take a drive through a major city in South America, such as San Paulo Brazil. There you find nearly 30 to 50 percent of the people ignore speed limits, traffic signs, and lane markers. Nearly a day didn't go by where you didn't see some compact car stuffed up under the backside of a truck, wrapped around a concrete post, or flipped over on the road with the local fire department hosing down the nearest sewer the parts of the victims they couldn't scrape off the road. The local police don't enforce the traffic laws so driving, or riding, makes for an exciting time in a way far different than a thrill ride at a theme park does. The people had contempt for the traffic laws, and since they where not effectively enforced, the predictable results, mayhem.

Yeah, you're right. Its like following a dog a round sniffing for a place to take a dump. Then its just plain fun to chase the darn thing around when it has to crap, but you won't let it, and see how desperate it gets. And after all it has been rumored before that he beats puppies, so fair is fair.

"Linda", you bring up an EXCELLENT example.

Alt.christian newsgroup is about Christianity, right?

And Rec.radio.cb is about...CB...right? As the FCC and the majority of law-abiding people define it, CB is NOT about 70 KW amps and "competition". It is NOT about illegality, (amps, export radios, freebanding, etc.) It is the legal use of type-accepted equipment on the authorized frequencies.

If you wish to find people that practice illegal CB, go to rec.radio.pirate or alt.cb.skip or whatever.

What seems to be missing here and what has been said many times in the
past..... that many of the anti guys have forgot

THE REAL BIG GUYS THAT OPERATE THE SUPERBOWL OR GO TO KEYDOWNS
REGULARLY DONT EVEN COME TO THIS NEWSGROUP SO REALLY WHO ARE YOU
ATTACKING???

Just the guys that like to get on the newsgroup and also talk a little
skip, but the real keydowners as you say, are not ever even on this
newsgroup. So again, why all the bullshit crying whining and
insulting??
You aren't even going after the hardcore guys. There may have been
SOME here at one time and maybe you have succeeded in getting them to
leave this newsgroup. But guess what??? They are still keying down or
talking skip and that will happen even when this newsgroup goes away!

So what do the anti keydowners/skiptalkers/out of banders have to say
about that???????????????????

While I don't doubt that 4 watt AM 27 mhz dx occurs quite frequently, how can you be sure of WHO you talked with? Since there is no way of ID'ing anyone for certain, ANYONE can say they are "Mr. Blue" or "Mr. Green" in Antarctica or Australia or Swaziland, and you have no way of knowing.

That doesn't help clear up any misconceptions at all. The link is
nothing more than the opinion of ONE British amateur/CB radio operator
and all your doing is telling us that you agree with him.

Here's the opinion of ONE American amateur/former CB radio operator.

What the real issue is here, many of these free banders want the
amateur radio community to approve of their illegal activities and
since this is not happening, they spout all there anger and hatred
towards ham radio operators.

This is similar to many of the other groups in this country that are
engaging into illegal and immoral activities. For example, the most
militant group is the gays they demand that normal people accept their
immoral activities and when we don't. They attack us.

The same thing goes for illegal drug use and illegal immigration.
These people demand that law-abiding citizens must approve and accept
their illegal and immoral activities.

Heinlein is da bomb.

Well, except for the incest stuff and the fact he's dead. :-)

Train,

Tell the guy in WV to send me an email.
I`m on the PA, WV, OH border and I`ve got mine for sale.
It`s 100% ready to rock and roll.

Thanx
Randy

I konow you guys are talking about AM, but I think I can relate it to a similar experience. In the mid 80's, I worked an 11-meter JA station with approx. 17 watts on SSB. I was kinda skeptical but there was a decent pile-up brewing so I WFWL'd. (Work first, wory later. I ended up "tail-ending" a QSO and received the call. Needless to say, I became a believer when a QSL card from Kadena AFB on the island of Okinawa showed up in the mail. So the answer is a QSL card.

You get a qsl Card from every QSO? Your are saying that 100% of your contacts QSL? In the 80's qsl'ing was a big thing, now a day it is a thing of the past. The only way to be sure of a contact is by of course receiving something from them to confirm but it is a dead horse. Mid 80's less congestion on the band, less amplifiers, less "Export" radios = less noise =Less people.

Ok lets see here in Landwhale post he says I have an AOL Account, now in his sig file he says to complain to AOL about how I am using false headers with refrences to there services to by pass filters ...LOL Well if I do have AOL as you said that I did, then how can I be using false headers with refrences to there services if I have an AOl account? Lets take this a step further, GigaNews is who handles Comcasts Newsgroup Feeds so looking at my header Giganews is proudly displayed by them each post I make. LOL How can anyone complain to GigaNews about me using false headers with references to there service when ..LOL they are thre one providing the service. LOL Is that 3 strikes yet against Landwhale. So what is it Landshark your sig file has been lying all this time Or I don't have Aol or I don't use GigaNews. Nice Off topic post btw, your the king of them posting to make accusatory and harrassing style content towards me, when will you learn. I own You!

And...Here is the opinion of one used to be Ham and
occasional Cb'er.

When I ran/run an illegal CB setup I didn't need or request
a Hamster's approval. In fact, the worry of a Ham knowing
what I was doing never even came to mind. I did whatever
knowing full well of the consequences and the odds of
getting caught doing it.

If you took the time to notice, most of the reprisals
emanate from CB'ers when some self-important, I passed the
test 'cause I remembered the answers from the book, pompous,

holier than thou Hamstergoons began spouting verbal vomit towards said CB'ers. I'd be willing to bet that if you Hamsters stopped talking down to CB'ers and applied a bit more teaching etiquette that much of the CB'er vs. Hams crap would subside.

Who asked you Hamstergoons to come here and save us from ourselves? At what point in your seemingly pointless lives did you decide to appoint yourselves honorary Salvation Army soldiers fighting for the FCC, for truth, justice and the American way? Do I need to send some of you a big red "S" to put on your t-shirts?

I know why some of you Hamsters are here. It's so you can show us poor simpleton's your superior intellect. You know what I'm talking about...all the smarts garnered from those little study guides and what you think you know from listening to other Hamsters you deem as knowledgeable.

Much of the rhetoric has to do with that tiny little chunk of spectrum between 10m and 11m. If that spectrum were to disappear you would still be here trying to show us poor dumb CB'ers the way to the light.

Why can't you just ignore the fact that it's there and go on about your business? If the FCC wants to they can enforce their rules pertaining to that insignificant spittle of spectrum. Sure, if someone encroaches your precious 10m limits you have every right to bitch but you and I both know this doesn't happen regularly enough or to an extent requiring damnation of CB and it's occupants.

Is it not possible for you to find a more worthy cause to fight for? How about you go find a school crossing to patrol..a neighborhood to clean out of drug trafficking..some houses owned by the elderly to renovate.. get a map and join the border patrol, I'm sure you can think of some more worthwhile causes to champion.

When I first looked into this newsgroup I found a worthwhile exchange of technical information and ideas regardless of legality. This was the open kind of information sharing that enticed me to hang around.

I don't care if there's Hamsters here as long as they are here with the idea of sharing information and not to look down their noses. Constant legal vs. illegal bashings aren't going to change anyone's opinion or method of operation. If anything it would turn me off to Ham radio and even this newsgroup.

>Thta's a freakin' insult to all Marines...

It's obvious that I know more about being a Marine than you, twist.
The primary responsibility of a Marine is to "accomplish the mission",
and to do so with whatever means are available. Without a radio you

will just have a batallion of grunts on the battlefield. But with a radio you have artillery, air support, logistics, intelligence, and a host of other resources that may not be available otherwise, and the radio makes each resource more effective: artillery is more accurate, intelligence is faster, logistics is more organized, etc. A grunt with a radio is going to "accomplish the mission" much more effectively than a grunt without one. In fact, it makes the table so lopsided that the grunt with the radio may not even need to fire a single shot with his rifle.

> IF it is even remotely true,

>himself and a Marine doesn't resort to insults and petty name calling
>when he knows he is right if another is incorrect, and lastly a Marine
>doesn't antagonize when he is stumped, he improvises.

You sure seem to think you know a lot about Marines, twist.

>A real Marine would never NEVER claim his radio was his most important
>piece of gear, (You should have learned this well before fire school)
>even if you were a REAL "sparks."

I didn't say that, twist. I said the most important weapon on the battlefield is the radio. And despite what you have learned in your vast experience with the Marine Corps (a few movies, and pilfering the Toys for Tots barrel during Christmas), the most important "piece of gear" for a Marine isn't his rifle, it's his training.

>>I understand the importance of being responsible with such a powerful
>device. Did you know that an entire country was overthrown during the

>due primarily to the use of radio?>>
>
>
>
>
>
>Each time we elect a different party president the country is
>"overthrown" without a single shot being fired.

Wrong again, twist. This government is based upon the Constitution, not the president. The leadership changes, but the foundation remains intact. Next time why don't you learn something about the government before you open your mouth and show everyone just how ignorant you are on the subject.

Of course not, and I'm not here to inhibit those rights, either. But
you still haven't explained your bias.

>>
>>Now that's just ridiculous. Just because I want to keep burglers out
>>of my home and trespassers off my property doesn't mean I'm going to
>>attend the police academy and join the force.
>
>No, why else are they here and only here. If they were truly concerned they

>for real.

If you really feel so strongly about breaking the rules, join your
local chapter of organized crime and start breaking them for real.

>>
>>Maybe something has escaped your perceptions: who have I accused that
>>hasn't admitted to illegal operation?
>
>So they operated illegally, does that
>justify the constant harrasment be them?

You are WAY off base here, Linda. Nobody is forcing them to read
anyone else's posts. They can killfile a person they don't like,
delete their posts before they are read, or simply not read the
newsgroups at all. And if someone feels they are being harassed, they
have every right to take any legal action they see fit to take. And
then there is the other side of the coin: they can't take what they
dish out. Check back in the archives and you will see that the object
of most of the "harassment" in the past has been the legal operators.
So if you are seeing the pro-illegal faction as the victims here,
think again.

>
>> Not only that, how can anyone be

>>considered a vigilante just by posting in a newsgroup?
>
>Ask Aaron and George, they seem to think that if they keep saying it enough it
>will become true.

That doesn't even come close to answering the question. Let's try
again: How can anyone enforce any FCC regs by posting in a newsgroup?

>> I cannot enforce any law just by posting:
>
>Correct

...huh? Put that one through the syntax mill and try it again.

>> I CAN tell of the very real consequences >of such illegal acts, I CAN
>>make the "hobby" of RF piracy a little bit >more distasteful to someone
>>sitting on the fence,
>
>So your saying for the past couple of months the very people that are being
>constantly barraged with obscene post are just "Fence sitting"?

No, I said nothing of the sort, read it again. And if you bothered to
read any of the posts you would see that any "obscene" posts are by
the people you are defending.

> They seem to
>know what will happen to them if they are caught, so why do they constantly
>bother them.?

Many people are not aware of the stiff penalties for violating FCC
regs. In fact, some people are not even aware that amplifiers are not

allowed to be used with a CB.

>> and I CAN provide moral support for those that are interested in using a CB
>for the purpose it was intended.
>
>Like keep handing them more rocks to throw at the bee hives?

Like providing technical information that's available to me. I have
also sent people CB parts that they need and I have laying around. Or
advice on how to make a legal station work better. Haven't you read
any of these posts, or have you just been reading only what your bias
will permit you to read?

It's obvious that this is going nowhere. You REALLY need to read some
more of the group, and with an unbiased attitude, before you start
condemning people, because you are showing that you don't know much
about what you are claiming. And here's the clincher, Linda: If all
you were doing by your original post was to whine about a couple
trolls, that doesn't make you any different than them. Physician, heal
thyself.

>indicated.

I didn't say that, twist. What I said was, "You have to stay within
the limits of the service or you are an illegal operator" which is
entirely accurate.

Gee twist, lately it seems that you have been having trouble
distorting the facts, but I'm sure that you will get back into the
groove very soon. Just keep practicing.

>>And BTW, advertising a CB amp is a federal offense all by itself, so

>and ask if it means THAT....

The use of the fallacies of division and composition is YOUR style,
twist, don't project it on me. I remember more than a couple posts
where you broke down a single, simple sentence into no less than five
pieces, totally destroying the original intent. That could be
considered to be either an act of desperation or OCD. So which is it?

> Comprehension should come way before mathematics. .

What the hell does mathematics have to do with it, twist?

>Nah, the dogs don;'t get beat, just let the coons take a small chunk out
>of their azz when yer trainin' them to hunt...makes 'em hungry and
>productive..even champions...if ya' know anything about blue blood
>breeding, check THE registry for top sportin' hounds...it's chock full
>o' Cooter Mae's blood.

That's not consistent with your previous posts on the subject. You
gloated over your abusive handling of your dogs. Why have you gone
soft on the canines since then? Someone report you to PETA?

>My comments were directed at the topics, not posts for amps of sale.
>Nevertheless, you have accused many of being illegal based on their
>discussion, many of who have never posted an amp for sale.

>should try to increase my composition output.

Now where did I just read someone complaining about divergence from
the subject... hmmm... I know I read that just recently... and I
remember that the author still hasn't figured out the unbelievably

simple process of quoting newsgroup text... so who could have written
that post...?

Thanks to all five people who have agreed to test the new SkyWave amplifier PCB. The materials for you to get started are on the way. The final release is on schedule at this time. I will have a photo of the finished amplifier board at my site within the next few days for reference.

Nah, I decided to take Sparky's advice and do a search on the word
"pile". Guess who's favorite term that word appears to be?

Dam where is mine ?
I need to test one also. I waunt a amp that woulg give me 10 db of gain, on the low to the hi peak of my AM RF waveform.Not compressed. 4 Watts in 40 out and 16 Watts in 160 out, this would give me a good clean AM amp without the AM peak compression which loweres the audio level.

Mark,
I have another option that I personally think is the best. The
Firestick is a good antenna and the NGP is garbage but if you want to really
get out the best antenna that I have ever run in back to back tests was the
102 inch whip. Next to that was the Wilson 1000 mag mount and after that
the hole mount Wilson. On a stock sideband radio a guy confirmed a contact
in Alaska from California. Not to bad. Good Luck, Bill

Since you say that you have read the archives of this NG extensively I
am surprised that you have forgotten the many, many examples of rude
behavior by illegals against those who disagree with them. The
profanities contained in some of Landshark's posts would curl your
hair. And Moparholic's very first post in this NG was a profane attack
on Sparky (who committed the "crime" of supporting legal CB). Train's
outbursts of profanity are legendary. Then there are innumerable
profanity-filled attacks by anonymous (read: alter ego) posters on me,
Leland, Sparky, or virtually anyone who stands up for legal CB. I
could go on and on citing examples, but you have read the archives,
right "Linda"? So you know the keyclowns started the ball rolling with
their disgustingly crude attacks. Is it any wonder that many
supporters of legal radio have chosen to answer them on their own
level?

Oh thats funny a few months back you said you sold everything I guess your
just a part timer now?

WA3MOJ

Yes Ladies & Gentlemen, it is no doubt now that George,
who has said his name isn't George until I started posting
his call sign. He also claimed to not have an AOL account,
well that was just proved wrong. He also used the
Landsharksuxs with a post referring himself as Aaron,
how ironic isn't it.................. LOMFAO!!!!!

Landshark

Back into the kill file for you George or would you like
to be called Aaron ROTFLMAO!!!!!!!!!!

--

Beware of George Busch WA3MOJ of Allentown Pa.
He is known to post from different ISP's, under Avoobner
and many different screen nics, using anonymous mailers, just
to make harassing,accusatory style posts with
absolutely no useful content at all.
Currently posting as LandsharkSuxs@aol.com avoobner@yahoo.com
Please forward any post to TOSUSENET@AOL.COM.
Abuse@giganews.com Abuse@Comcast.com and
complain about how this person is using false headers
with references to their services to by pass newsreaders
filters.

Actually the problem is not the little chunk of spectrum from 27.410
to 28.000
The problem is, the interference that your dirty illegal CB's are
causing to 10 and 12 meters and the illegal operating on 10 and 12
meters. If it wasn't for that you would go unnoticed by most hams.

>

Those are worthwhile causes but what about the hams who work with the
Red Cross, Salvation Army, Fema, and other organizations. You
conveniently left those out. Didn't you? Other than React, what causes
do Freebander's champion?

>
> When I first looked into this newsgroup I found a worthwhile

Didn't you say you're a former ham? So aren't you already turn off to
ham radio?

Contrary to the paranoid beliefs in this newsgroup the majority of the conversions on HAM RADIO, have nothing to do with CB radio and I'm reasonable sure the majority of conversions on CB radio have nothing to do with ham radio. Perhaps it's just paranoia among freebanders.

Hello Linda,
I too have been lurking here for a couple of months. We female CB ers
need to stick together <gg>. I agree with you that the behavior of
many of the posters in this room is outrageous and is sufficient drive
away most normal decent people, however I don't think you should
single out George or Aaron as the cause or even the continuation of
the problem. Allow me to explain. My husband works shifts as a
volunteer firefighter in our town and we have public service radios as
well as a CB in our home. There is a group of what we call
'alligators' on our local CB channels, all mouth and no ears. These
individuals run what I've heard them brag are many thousands of watts.
Their language is offensive and their manners are crude. Normally I
would simply stay away from those types. However I monitor channel 9
during the day to provide motorist aid should it be required, and the
noise from this gang bleeds onto channel 9 quite severely. I have
attempted to speak with them but have got nothing but insults. They
have told me to mind my own business and that they have a "right" to
operate illegally and there's nothing I can do about it because the
FCC no longer enforces rules on the CB. Many of the posters on this

newsgroup have written more or less the same thing in this newsgroup! I can see where law abiding people would get frustrated. Linda, if you blame Aaron and George then you also need to blame the illegal and thoughtless outlaw CB ers that get encouragement and help from others of their ilk in this newsgroup. I have no wish to add censorship to the problems here, but I do think your view Linda is very narrow and you might want to open your eyes to whats really going on.

Kathy O'Connell

Something for the Part 95 Disciples To Consider

After spending an inordinate amount of time and effort in reading the daily drivel of the rec.radio.cb newsgroup -- trying to obtain nuggets of useful information, its dawned on me that I know you.

I know you as the "Channel Master (CM)" from waaay back in the good ol days of CBing, the 70s. Do you remember them? These are the people who seemed to be available constantly, just one of those 24/7 operators. These were typically radio stations either in the living room, with the La-Z-Boy sitting next to the table with the radio, power mike, ash tray, two half-emptied packs of smokes, and three convienence store cigarette lighters -- or were in the master bedroom radio set up on the nightstand oxygen tank adjacent to the bed.

The disciples quoting of rules and regs remind me of these CMs you dont talk unless the channel master allowed you to talk. Much like the concept of turning r.r.cb into a moderated newsgroup. (...bad thing, very bad! For an example, see rec.radio.broadcasting archives for the last few years...) Much like the Jehovhas Witnesses who bang on the door on Saturday morning, wanting to talk to you about God and the bible, the CMs were the deities of the frequency they happened to be on at the time.

When the (had) to go to another channel (probably to communicate with anothe CM) they seemed to turn into the mortals the rest of us were. It didnt take long before the CM had finished his business, and turned back up on his home channel back to the throne of the CM.

This newsgroup is much like the old Ch. 11 was waay back in the prehistoric age of CB the calling channel. The unfortunate part is, those that think they are the CMs of this frequency are sadly mistaken, as there are scores of ways to communicate useful information about legal and illegal 11m band operation. You guys remind me a lot of these CMs. Their usefulness was neglible then its even less needed now in this newsgroup.

One more quick point then Ill drift off into the ether. If youre planning on preaching and evangelizing the heathen and unfaithful, one way to start is by showing your faith to us in Part 95 not by words but by deeds.

Congrats Steve. You have figured out AM amplification and it is a real bitch to achieve. As well as the headroom you refer to you might insist it stay the hell out of Class C so as not to compress or clip from the low side either. Never win any meter-reading contests that way.

Your next problem is to find someone to talk to that might be both intelligible and listenable for more than 38 milliseconds. You gotta have swang, man. Bellllllch.

> Any you are using the same radio,

Yes.

> same antenna,

No. But the difference in my antenna, would not make the noise level
jump 20 db. If that were the case, I could sell this antenna as a
"linear buster" as it would appear to do what current amplifiers do.

> at the same location,

Yes.

> and have had the radio calibrated occasionally?

Of course.

I could see your skepticism if the difference were minute. But the fact
is that the difference in the mean average noise level during the day,
when the skip is running high, is at least 10 - 20 db stronger now than
it was 25 years ago.

Well lets put it this way,
I could use a digital delay pedal and get what I want for about the smae price but it just doesnt work very well for mobile use
example, a dd will give me unlimited repeat times all the way to reverb, record etc plus my last one had all sorts of features like reverse wich took what I said a digitally played it backwards just stupid toy stuff but like I said that doesnt work for mobile very easily. But if anyone knows how I could modify my galaxy echo board I would appreciate that too.
Thanks

And the difference might just be minute. If you are using a misadjusted meter on the radio, it's easy to see how the signal could be 10-20db higher on that radio. 10-20 db higher? Gee, how many clear channel AM broadcast transmitters HAVE been sold to the general public? Jeesh!

Gee, Bill, you have been gone for a while, I almost forgot about a whole bunch of questions I have saved for you. Like, have you realized your goal of developing an amp that will "set a new standard for quietness" using liquid-cooled tubes and fanless heat exchangers? Have you studied up on Class E amps so we can continue that discussion? Have you ever figured out how a Class C amp can self-bias itself into linearity? And why does it do that on AM but not SSB? And how do you get a Class C to run linear? And while operating at 70% efficiency?

If you are truly a CB amp God you should be able to answer those questions, right? You aren't hiding, are you?

Oh I will achieve it, and I thought The Professor would use bias on his amps, and if not it could be modified, that is why he is giving out the trial amps for, so some people could test them out, screw with them and give him the results. You are right it is hard to find intelligible and listen able people for more than 38 milliseconds. For as swing, my local AM stations sounds Dam good and they do not need swing. If I need to I will pre warp the am signal before it goes to the AMP so it will come out the way I want it to. I just might half to add a little swing for the hell of it because I like to say AAAUUUDDDIIIIOOO also.

I'm not quite sold that the FCC was acting in "our best economic interests." Sorry, but the agency to which we're referring does NOT exactly have the greatest track record for acting in "we the people's" best interests.

>2) The
>attitude of the public in that era.

Perhaps Jerry, but I've taken the liberty of procuring a decent amount of CB & ham "rags" (magazines) from yesteryear. (Mainly 60's & 70's.) From what I've been able to glean from these potals into the past, a few things are readily apparent. There were ALWAYS folks for which the CB served as "hobby radio." "Bad citizens" who succumbed to their natural curiosity wrt those strange far away signals. I read that there was actually a push to remove the 155.3 mi. limit on the CB as far back as the mid 70's. Hopefully, this issue shall be revisited post-2003, if the Morse requirement is actually dropped.

Conversely, there were ALWAYS those (Whether hams, self-appointed radio cops, or both.) that frowned at this, declaring that "there can be ONLY one form of "hobby" radio!" HORSEFEATHERS! 11-meters has evolved into pseudo-hobby radio service, despite it never being intended to serve as such. It has served as a "stepping-stone" for a great many hams and shall undoubtably continue to do so for many more future hams. Sure the Tech ticket is easy, but it's not for everybody...and yes, there are lids on both services. In closing, people responded just as much to their curiosoty about "skip" back then as they do now...it's just allot more visible (Via the internet.) and organized now. (Again, via the internet.) "The streets were cleaner, people were more honest, yada...yada...yada..." I talk every evening (Well, every OTHER evening.) with a graduate of NYPD academy, class of 55...and do you know what? "Y'all" had just as many rotten apples back then...but you wrer certainly more discrete about it. ;-)

>There already was a "CB" up on UHF, but it failed due to various factors.

your antics.

>And you are proud in your contempt and active defiance of the same
government that protects your freedom of speech.<<

Again, I have no "contempt" nor active defiance (it;s isolated and
extremely selective) for the government. It's just you attempting to
focus on another's actions whenever your own questionable tactics are
called upon.

>Just not proud enough to put a name behind your words. Maybe you should
take a lesson from Linda.<<

My name is right along side my numbers on the roster, many in here know
my real name,,,,only a few dwell on such things...I'm a cber, in a cber
forum.....cbers use handles.

>But I guess that's between you and your conscience. <<

However your gray matter chose to equate handles with conscience doesn't really matter and is not pertinent to anyone but yourself.

>Regardless, do you
know what the most important weapon is on the battlefield? The radio.<<

The RADIO? THE RADIO? LMMFAO! I thought you claimed to be a Marine? Thta's a freakin' insult to all Marines...

>It's obvious that I know more about being a Marine than you, twist. <<

Frank, your ignorance precludes you.

>The primary responsibility of a Marine is to "accomplish the mission", and to do so with whatever means are available.>>

>Without a radio you will just have a batallion ofgrunts on the battlefield. But with a radio you have artillery, air support, logistics, intelligence, and a host of other resources that may not be available otherwise, and the radio makes each resource more effective: artillery is more accurate, intelligence is faster, logistics is more organized, etc. A grunt with a radio is going to "accomplish the mission" much more effectively than a grunt without one. In fact, it makes the table so lopsided that the grunt with the radio may not even need to fire a single shot with his rifle.<<

Well, why didn't you SAY you were in logistics and supply and have no experience in grunt work?
Your lack of experience shows with your scenarios.....were you ever airborne? How many times?
Jumping under the cover of darkness in unknown enemy territory at times requires maintainig radio silence.......Under camo within a few clicks of the enemy, not knowing if your transmissions are being heard or not,,you take your radio...don't worry about it though, the rest of us risk our azz for your type.

IF it is even remotely true,
you most certainly went to boot camp at the Holllywood facility, as you NEVER came through Paris Island.

>That's spelled "Parris" Island.<<

Yea, I'm hip..and, oh yea, relevant is spelled r-e-l-e-v-a-n-t. You wanna start nitpicking on typos, use spellcheck yourself.

  A real Marine doesn't have to be as
cocky as you present yourself. A Marine isn't uncertain or unsure of himself and a Marine doesn't resort to insults and petty name calling when he knows he is right if another is incorrect, and lastly a Marine doesn't antagonize when he is stumped, he improvises.
>You sure seem to think you know a lot about Marines, twist.<<

Merely pointing out fallacies, nothing more, nothing less.

A real Marine would never NEVER claim his radio was his most important piece of gear, (You should have learned this well before fire school) even if you were a REAL "sparks."

>I didn't say that, twist. <<

And so you didn't...my apologies...I thought the "sparky" handle may have came into play due your occupation in the service....

>I said the most important weapon on the battlefield is the radio.<<

Bottom line, when it all comes down to it, and you are In the middle of a severe firefight, who or what were you taught to rely on..your radio, another, or yourself?

>And despite what you have learned in your vast experience with the Marine Corps (a few movies, and pilfering the Toys for Tots barrel during Christmas), <<

Actually, I have been on too many "toys for tots" runs to count, but I don't play motorcycle anymore..I'm more into lazy float trips and flats fishing. Certainly you remember I don't watch television, Sparks, (can't stand the slanted propaganda <g>) with the exception of an HBO show or two,,,I don't have the time and there is more BS on TV than in here.

>the most important "piece of gear" for a Marine isn't his rifle, it's his training.<<

Which is correctly not included on your gear list
as it isn't a tangible item.

>I understand the importance of being responsible with such a powerful device. Did you know that an entire country was overthrown during the Eisenhower administration without a single shot being fired, and it was due primarily to the use of radio?>>

Each time we elect a different party president the country is "overthrown" without a single shot being fired.

>Wrong again, twist.<<

How you figure, Frank?

> This government is based
upon the Constitution, not the president.<<

Actually, this government is based on Allan Greenspan, but I'll indulge you for the moment.

>The leadership changes, but the foundation remains intact. <<

The foundation changes each term, evidenced by the overthrows and dismissals entered by the Supreme Court, not to mention the myriad of laws being introduced and passed and new and opposite policy imposed as compared to the last administration.

>Next time why don't you learn something about the government before you open your mouth and show everyone just how ignorant you are on the subject.<<

And you were doing so well......no wonder you have problems adapting to change, you're not even aware it happens.

3472. FS...RCI 2950 DX

Newsgroup: rec.radio.cb
Date: 2002-05-08 14:25:54 UTC
From: Tom Castiglia <tomc100@attbi.com>
Message-ID: <SzaC8.14017$2m.3569803@typhoon1.se.ipsvc.net>
Source record: 123336

Selling a never-used, still-in-the-box RCI 2950 DX. This radio has had the module installed to open up the 11 meter band, but it has never been "peaked, " tuned, or used in any way except to verify the conversion with a couple of transmissions into a dummy load. The scope showed 100% modulation on AM as it came out of the box.

It features PA, FM, AM, USB, LSB, CW, FM, Offset for repeater use. Roger Beep, 10 Memory Channels, Noise Blanker, RF Gain, Microphone Gain, Clarifier, Ext Speaker jack, CW Key Jack, Signal Strength LCD Bar Graph, VSWR Meter function, Variable RF Power Out, VFO control good down to 0.1 KHz using step control from UP/Down Microphone or front panel. 25+ Watts PEP. Covers 10, 11 and 12 meters.

Before you ask, I'm selling this great rig only because I've permanently lost my vocal cords to throat cancer. I never got to use it.

You'll see these radios selling new from $269 to $289, plus the conversion. I'm asking $200.00 plus $8.00 shipping in the U.S. Postal Money Orders only. I will also throw in a new black crinkle finished adjustable hump mount I purchased for $17.00.

A man was walking one day, when he came to this big house in a nice neighborhood.
Suddenly he realized there was a nude couple making love out on the lawn.
Then he noticed another couple over behind a tree.
Then he saw an other couple behind some bushes by the house.

He walked up to the door of the house and knocked.

A woman answered the door and the man asked what kind of a place this was.
"This is a brothel," replied the madam.

"Well, why is everyone doing it out on the lawn?" queried the man.

"Oh, we're having a yard sale today!"

Source record: 123346

WARNING:
If you get an envelope from a company called the "Internal Revenue Service," or "IRS,"
DO NOT OPEN IT! This group operates a scam around this time every year.

Their letter claims that you owe them money, which they will take and use to pay for the operation of essential functions of the United States government.

This is untrue! The money the IRS collects is used to fund various inefficient and pointless social engineering projects.

This organization has ties to another shady outfit called the Social Security Administration, who claim to take money from your regular paychecks and save it for your retirement. In truth, the SSA uses the money to pay for the same misguided make-work projects the IRS helps mastermind.

These scam artists have bilked honest, hard working Americans out of hundreds of billions of dollars.
Don't fall for this scam!

lol, Betty

Yeah. You must be thinking about Rio, which is by the coast where most
people think about going for a vacation when they visit Brazil. The smart
people don't go to Rio anymore either. The crime rate is getting way too
high. They pick one of the smaller coastal cities further to the north. They
have nice beaches, less people and less crime. From time to time you see a
special on TV about how the local police, in Rio, have gone around killing
the street kids because they think they are the major source of the petty
street crime that drives off the tourists.

Between two countries I have been in, Brazil and Chile, the women in Chile
not only looked better, but they sure were much more friendly than any I met
in Brazil.

Well during the so-called winter it rains a bit, and the temperature drops
to a low of around 40 degrees F. During the summer the temperature may reach
100 to 110 degrees F for a few weeks. The rest of the time its in the 80's
and 90's and sunny. The city itself looks like downtown New York, mostly all
apartment buildings as skyscrapers. The population of the city is at least
16 million people I was told, and it looks it too!

Well men can't get pregnant either, but does that stop any of them from
having an opinion about abortion, and picketing abortion clinics?

> You've also compared us CBer's to the terrorists of 9-11.

In the sense that the "pirate CBer", and the Terrorists of 9/11, neither of
which cared about established rules, and respect for the rights of others.
The pirate CBer clearly violates Part 95, while the Terrorists of 9/11 cared
less about the lives of the civilians they killed, and their right to live.
So the point I made was if one group can find some cheap, and phony excuse,
to validate what they do, well the same idea can be applied in a different
context resulting in a fatal outcome.

> Is this another one of your famous 'comparisons' ?

Only if you think it is.

Your local AM station is more than likely digital. When the local Loudenboomer went digital switched the engineering staff spent some time looking for the odd smell and noise and finally realized the furnace had come on for the first time in years.

That maybe true Bert. The idea of raising the bar a bit for 11m however, with regard to power and distance, is a moving target. Once the "new" limits get set in place some will always want more. Then the "norm" is higher after a while, and again somebody will suggest again what you have already said, and raise the bar yet again. At some point you have to say enough is enough, and draw that line in the sand, which says if you want more then get a Ham Ticket. So the logical question is why waste the effort raising the bar when you know it won't stay that way, and just draw the line in the sand right where it has been for the past 40 years.

well if you are having trouble communicating on the cb band and you
are into emergency work, then by all means get you some decent vhf
rigs.....that way you can talk and you don't have to hear the
power stations. dear, you must not have learned anything if you have
been on cb radio a long time....big radios talk when they want to talk
and little bitty suckers have to take a number and stand
by.....that is the way it always has been and always will
be.....i really do not understand this whining on your part....like i
said.....get you some nextel direct connect digital phones or
something....the fact that you are on here whining about your
inability to communicate on the cb bands is absolutely ludicrous
because if you were really serious you would do as i have
suggested...which leads me to believe, you and your hubby tend to be
crybabies who overestimate their collective importance and have some
anal rentive tendencies and no money.....sooooooooooo get your
knees in breeze, and quit cryin and start buyin.....otherwise
don't expect a sholder to cry on here,.....this is
rec.bigradio.cb.....and that is my roger.....sdj is
down.....

Leland,

It basically goes back to the fact that people tend to chafe under anything that restricts
their activities. I know folks will take exception to this comparision, but on the local news, it has come to light that young boys have taken to using the outer loop (I-485)
around Charlotte, NC as a drag racing strip. Some of them were actually interviewed
on the 5 PM news. Some of them see no harm in their running 100+ MPH on a pub-
lic roadway and are "chafing" because the local police have cracked down on it. Of
course, this is much more dangerous than operating illegally on a radio, but the racers
now want the city of Charlotte to build them a dragway with taxpayers' money. Mayor
says no way. Besides that, they just closed a drag strip a few years ago because of complaints from the neighbors of the noise and smoke. Most "neighbors" wouldn't want
such a thing built in their areas.

The comparision to radio is this. There are people who want to do radio "their" way which means the lifting of any restrictions on frequency, power, or distance. There are
already avenues of doing this, but "they" don't want to abide by the rules that govern it,
or take tests to ascertain their understanding of RF characteristics and/or theory, or their
ability to engage in their hobby without offending their radio "neighbors". They see no harm if they interfere with someone else--they put them down as a "mudduck"--and it
becomes a matter of who can be King on the Hill. Their "knowledge" of radio means
everything over to the right, pegged out, loud and proud, and the idea of co-existing with
other operators at the minimum of power needed to establish contact is foreign to them.

No, they don't "kill" people like the drag racers, but they can delay, hinder, and stop
traffic from being passed that is still important. They cite the bad ham ops who are, indeed, a problem for the Amateur Service, but do not represent the majority of hams.
They stick out because they are unusual and draw attention that the regular operator does not. They are the people that should NEVER be allowed to get near a radio, and,
yes, tests do not an operator make, but testing and effective enforcement are the only tools we have. I cannot understand what that minority of operators gets out of acting like
a child. I often wonder if they had/have children, and if they ever correct them for bad behavior. Seems like they don't even have the right after acting like that themselves.

No doubt, changes will come to the CB service, but I still believe that it is unlikely to be
in the area of relaxed rules that allow it to become a parallel "hobby" service to the Amateur bands. It would be more likely that it could get "moved" up into VHF as public
entities move to 800 and trunked services--not an easy task since those who insist on working DX would be loathe to give that up. Issues such as the trucks who operate up
in 10 meters make it harder for concessions to be justified. Opponents will point out the
huge amps, etc and throw up other roadblocks to additional privileges to CB. just MHO, but I don't think CB will ever get any changes to the existing rules. Operating a
radio is NOT a right, it is an accorded privilege. The restrictions that exist are there for
a reason; to protect all users from interference and allow the most effective use of all the
spectrum by all the people. Just throwing open the gates, letting anyone and everyone just operate DX, run power, etc will just cause chaos. Therefore, it isn't likely to happen.

Jerry

It's fun to see to what ridiculous lengths Twsited with go to in support of
his half baked ideas. All he needs it a bit of a push to keep him flopping
around like a fish out of water for days on end. Besides all the time he
wastes looking for back posts of mine in the archives in the vain hope he
find something to embarrass me with, or responding to evey post I make,
keeps him inside and away from molesting the neighborhood kids.

>>lost my vocal cords to throat cancer. I never got to use it.

First, please allow me to express my sorrow at your loss...and my joy that you are still among us as a "cancer-beater." I agree with Tim that there's still plenty to enjoy within amateur radio other than voice. Although the rig's 11-meter enabled, there's plenty of CW action going on on the 10-meter novice sub-band. Heck, nothin' wrong with keeping an ear on 11-meters too. (Since it's already enabled.) BTW, I'm living proof that ANYBODY can pass Element 1. <ggg> Give it some thought, OM. BEFORE you "give" that rig away. :-)

>> for many more future hams.
>
>That maybe true Bert. The idea of raising the bar a bit for 11m however,
>with regard to power and distance, is a moving target.

I'll go along with that, Leland. I'll clarify this once more for the record so there's no misunderstanding. The ONLY thing that I believe should be "legitimized" is DX comms, nada mas! However, I do not get my tailfeathers twisted (No pun intended.) over someone running a clean 30 watt station on the legal 40. (Via a RCI-2950, HR-2510, FT-757, etc...) My tolerance level (For what it's worth) drops dramatically from that point on. (Davemade, Skullcracka, X-Force, etc...)

>Once the "new" limits
>get set in place some will always want more. Then the "norm" is higher after
>a while, and again somebody will suggest again what you have already said,
>and raise the bar yet again.

No new limits. (Just the removal of an old one.) For the books, 4 watts AM and 12 watts SSB. Better yet, just 12 watts SSB. ;-)

>At some point you have to say enough is enough,
>and draw that line in the sand, which says if you want more then get a Ham
>Ticket.

Sounds like a plan.

>So the logical question is why waste the effort raising the bar when
>you know it won't stay that way, and just draw the line in the sand right
>where it has been for the past 40 years.

Because the last 40 years have shown us what the citizens appear to want from "their" Citizen's Band. Which brings us back to my original paragraph, to which you replied;

>That maybe true Bert.

I don't see the removal of the 155.3 mi. limit as "raising the bar." I just don't believe the "don't ask, don't tell" policy belongs in 11-meters. See? No hidden agendas or amps up my sleeve. Take care, Leland.

I figured from the kind of reception that Linda got, you guys would
also give me a hard time. I assure you I am female. Maybe some of you
have problems with women and that's why you're so hostile to them.

> More like your jealousy...again.

Jealousy! This is an idiotic statement. Now why would I be jealous of
you? What makes you so special, that I should jealous. You really have
a big opinion of yourself. Hate to break to you but you're not special
to anybody but to your own family and friends. As for the rest of the
world you're just another schmuck like the rest of us.

>PS just because I'm a blonde woman doesn't make me so stupid
>as not to look at the header, gheez!.

Linda,
I do sincerly hope being blonde has nothing to do with it since my husband and my son and I are all blonde! >>gg<< I can understand with all the nonsense in this group you being suspicious, but please give me the benefit of the doubt as I am just as much a woman as you are, and here for the same reasons as you are. Like you, I am a CB enthusiast. Like you I believe there is too much hate going on in this newsgroup. Having lurked here for a few weeks I can see with my own eyes what's going on. Just because someone accuses you Linda of being chimbuba or icecoldnyc does not necessarily mean it is so, even if it may appear that way on the surface. You might want to extend this courtesy to the people you disagree with, like George and Aaron. Now about this fellow "Special Delivery Jones". I don't understand why no one complains about his postings? They do no one any good and more often than not they are filled with hostility and threats to other people. Linda I want to believe you are a woman like me, concerned and wanting the hate to stop. But when you ignore people like Mr. Jones it makes me wonder what your priorities here are. It's ironic because we do share so much in common besides hair color. I am of Irish descent like you, married, and a concerned CB user. I hope we can come to a better understanding of each others point of views and also help bring a little compassion to this newsgroup which it is sorely lacking right now.

Sir,
I knew this newsgroup was in turmoil but I honestly did not expect it to be this bad. No sooner do I post something than I am accused of being three different people, and now someone is posting "evidence" that I am not who I am. Really, how do you people get along with others in real life? Are you that hostile? I can sympathize with Linda after the reception she got here.

>Leland,
>
>It basically goes back to the fact that people tend to chafe under anything
>that restricts
>their activities. I know folks will take exception to this comparision, but
>on the local news, it has come to light that young boys have taken to using
>the outer loop (I-485)
>around Charlotte, NC as a drag racing strip. Some of them were actually
>interviewed
>on the 5 PM news. Some of them see no harm in their running 100+ MPH on a
>pub-
>lic roadway and are "chafing" because the local police have cracked down on
>it. Of
>course, this is much more dangerous than operating illegally on a radio, but
>the racers
>now want the city of Charlotte to build them a dragway with taxpayers'
>money. Mayor
>says no way. Besides that, they just closed a drag strip a few years ago
>because of complaints from the neighbors of the noise and smoke. Most
>"neighbors" wouldn't want
>such a thing built in their areas.

Jerry, Jerry, Jerry,

You know I "luv ya man!" But I have to invoke "spank" mode here. Are you seriously going to compare being "allowed" to work DX with 12 watts PEP with:

>running 100+ MPH on a
>pub-
>lic roadway

???!!! Are you kidding me, Jerry? Chafe? I think I just split my side laughing. I sincerely hope that these are the types of arguments the next RM-10xxx proposal to lift the limit encounters when it's presented, post 2003.

>The comparision to radio is this. There are people who want to do radio
>"their" way which means the lifting of any restrictions on frequency, power,
>or distance.

Stop right there, sir. Distance, yes. Frequency and power, NO! Just because I don't get my tailfeathers twisted over guys running a clean 30 watts P.E.P. on the legal 40, doesn't mean I want the legal power limit raised.

>There are
>already avenues of doing this, but "they" don't want to abide by the rules
>that govern it,

>or take tests to ascertain their understanding of RF characteristics and/or
>theory, or their
>ability to engage in their hobby without offending their radio "neighbors".

"Raise your hands, champ...raise your hands! Another left hook's on the way." You said it yourself, Jerry. "Times change." For the overwhelming majority of 11-meter enthusiasts, CB has evolved into a pseudo-hobby radio. That appears to be what the citizens want from "their" Citizen's Band. If you have even so much as an inkling of a doubt about that, feel free to avail yourself to a good internet search engine and check out 11-meter DX groups. Not tens, definitely hundreds, and perhaps thousands. By working via the RM proposal methodology to legally remove the distance limit, that IS "abiding by the rules." Lastly, there are a great many 11-meter enthusiasts that could run circles around many of the "appliance operators" that "our" fellow brethren complain about. Sounds like you're the only one "offended" by the legal efforts to remove the 155.3 mi. limit, and any comment supporting same.

>They see no harm if they interfere with someone else--they put them down as
>a "mudduck"--and it
>becomes a matter of who can be King on the Hill. Their "knowledge" of radio
>means
>everything over to the right, pegged out, loud and proud, and the idea of
>co-existing with
>other operators at the minimum of power needed to establish contact is
>foreign to them.

I think you're confusing the guy running 12 watts on channel 38 LSB in LI, NY who just wants to be able to "legally" QSO with that other fellow from San Bernadino, CA with "Kilowatt Charlie" on channel 6 AM running a "sweet sixteen." Don't lump 'em all in one basket, Jerry. It doesn't work outside of radio, and it has no place within radio either.

>No, they don't "kill" people like the drag racers, but they can delay,
>hinder, and stop
>traffic from being passed that is still important. They cite the bad ham
>ops who are, indeed, a problem for the Amateur Service, but do not represent
>the majority of hams.

Yet you're ready to apply the "Kilowatt Charlie" swath with a mighty wide brush.

>They stick out because they are unusual and draw attention that the regular
>operator does not. They are the people that should NEVER be allowed to get
>near a radio, and,
>yes, tests do not an operator make, but testing and effective enforcement
>are the only tools we have. I cannot understand what that minority of
>operators gets out of acting like
>a child. I often wonder if they had/have children, and if they ever correct
>them for bad behavior. Seems like they don't even have the right after
>acting like that themselves.

Agreed. I'd particularly like to see licensing brought back to the CB. Don't get me started on my taxpayer rant. :-)

>No doubt, changes will come to the CB service, but I still believe that it
>is unlikely to be
>in the area of relaxed rules that allow it to become a parallel "hobby"
>service to the Amateur bands.

It's already there, Jerry. Although it does not encompass the broad scope of amateur radio, hobby radio it's become.

>It would be more likely that it could get
>"moved" up into VHF as public
>entities move to 800 and trunked services--not an easy task since those who
>insist on working DX would be loathe to give that up.

Very rarely will you hear me say impossible, but this is about as close as I'll come. Use that search engine and check out the phenomenal international growth that 11-meter "hobby" radio has undergone. Even if we could wipe the band clean stateside, it would still be an unattractive piece of RF real estate for any prospective allocations. Gee, is that the 1959 boo-boo coming back to bite a certain "commission" in the ar$e? Who are we kidding, wipe the band clean stateside?...the FCC can't even control the "Kilowatt Charlies!" And some are "chafing" because the "rival hobbyists" want to legally lift the 155.3 mi. limit? Puh-lease!

>Issues such as the
>trucks who operate up
>in 10 meters make it harder for concessions to be justified. Opponents will
>point out the
>huge amps, etc and throw up other roadblocks to additional privileges to CB.
>just MHO, but I don't think CB will ever get any changes to the existing
>rules. Operating a
>radio is NOT a right, it is an accorded privilege.

Bring it on. You may be right, but it won't happen without having to explain to some of our "elected" representatives exactly why the expressed wishes (A point conceded by the FCC, BTW.) of the "citizens" were ignored wrt the Citizen's Band in favor of comments submitted by some "private interests groups?" Makes for good funding allocation discussions.

>The restrictions that
>exist are there for
>a reason; to protect all users from interference and allow the most
>effective use of all the
>spectrum by all the people.

Mother nature's amplifier, the ionosphere, doesn't appear to be cooperating with the 155.3 mi. restriction. This limit has NOTHING to do with "protecting all users from interference and allow the most effective use of all the spectrum by all the people." "All" the people, Jerry. regardless of distance. Imagine not being able to tell someone to stand by while you wait for a scheduled QSO so you can tell your party to QSY because it's against the rules. Instead, everyone stares at the transceiver and mother nature laughs. Sheesh!

>Just throwing open the gates, letting anyone
>and everyone just operate DX, run power, etc will just cause chaos.

Where's this DX=power+etc. coming from? You're falling into the same rut as another regular. It's about the 155.3 mi. limit, nada mas!

>Therefore, it isn't likely to happen.

Agreed. But it won't be for lack of effort.

I agree with the points you made. Your comment above was much the same as
the comment made by the FCC when the Alan Dixon Petition was denied, the
desire NOT to create another hobby radio service.

Good Luck!

Maybe the women can succeed where all the men have failed.

It's quite possible that our hormone levels interfere with our ability to think and reason clearly during a flame war; giving those with the lowest levels of Testosterone production a natural advantage in a non-physical confrontational arena, (such as this one).

Regards,

Dennis O.

I don't see it that way either, and as you said, I think it was you, that once the CW requirement is dumped by the ITU it MAY get easier to dump the 155 mile DX rule since nobody would be in violation of operating on HF without knowing Morse Code. The FCC could have simple cited the ITU requirements alone as reason to deny the petitions to request the removal of the rule.

The other issues you raise I think do fall under the umbrella of raising the bar.

>I just
> don't believe the "don't ask, don't tell" policy belongs in 11-meters.

It's gotten far beyond that point with the existence of all those 11m DX clubs thumbing their noses at the FCC in direct violation of the 155 mile DX limit.

I doubt that "Linda McGrath" or "Chimbuba" is IceColdNYC. I think it's
just our old buddy Painkiller here with another one of his one-sided
holy sermons attempting to justify the 'hobby' of illegally-high
powered CB.

I've never known Sparky or any pro-legal CB advocate to attempt to restrict the right of free speech of ANYONE on this newsgroup. Perhaps you are confusing criticism of illegal CB with restriction. The only exception to this is the advertising for sale of amps, as in FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency amplifier or amplifier kit capable of operation on any frequency or frequencies between 24 and 35 MHz. In any case, you or your alter-ego Painkiller are free to shout the glories of lawbreaking from the mountaintops if that is your desire. Just don't claim it as your "right" to go unanswered.

You
> conveniently left those out. Didn't you? Other than React,
what causes
> do Freebander's champion?

I didn't conveniently leave those out, just didnt come to
mind at the time. I knew you could come up with a few more
if you tried. Also, in the context of this conversation I'm
speaking to YOU and the remainder of the Hamsters sitting
HERE. You read nothing in my post attempting to diminish the
people already involved in such humanitarian services. What
you should have read was that YOU should join them and quit
being the whiner you portrayed yourself as in a previous
reply. Remember this? WHAHH WHAHH.

I shouldn't even respond to this question because it's off
topic and you dont really want to hear the answer. In times
past, CB'ers were equally involved with the organizations
suggested. The times have changed for both Hamsters and
Cb'ers in this regard. CB became obscolete first due to the
sliver of spectrum allowed and lets face it, Ham Radio is
precariously leaning on the edge of it's page in history as
well. Oh they both still find their niches every now and
again but...Hamster Radio is a hobby now just as much as CB
is.

It seems you and those like you are the ones with a need to champion something. As CB'ers we just want to play radio and enjoy ourselves in this minor slice of radio spectrum. This in itself doesn't require proving the worth of CB dom as a public service in the way that Hamster radio had to justify its' existance. You dont see any of the Cb'ers here going to Hamster NG's to recruit or correct them when they're wrong. It's the Hamsters that are coming here. Why? Who has anything to gain from Hamsters trolling here? I bet I know.

> Contrary to the paranoid beliefs in this newsgroup the majority of the
> conversions on HAM RADIO, have nothing to do with CB radio and I'm
> reasonable sure the majority of conversions on CB radio have nothing
> to do with ham radio. Perhaps it's just paranoia among freebanders.

What paranoia?? I doubt there's a CB'er anywhere that gives a crap what some Hamster has to say about 11m. And.. who was discussing anything about being "on-the-air" ? You brought your crusade here..to a CB NG. YOU chose this medium to make your stand. Nobody invited you..Nobody really needs you. You said your piece so be done with it.

Or is there more to it? Hmmm Perhaps the thought of some lowly CB'er speaking ill of your precious, nearly obscolete ham bands is cause for your own brand of paranoia? Perhaps I am correct in assuming a defect in your character which prevents you from feeling good about yourself despite all your myriad accomplishments in joining Amatuer ranks? I get the feeling you shouldn't be addressing anyone elses supposed paranoia untill you've dealt with whatever skeletons are in your closet. Me thinks Thou doest protest too much.

The QRP tuner is a bit to expensive for me.I'm thinking of using a stepper-motor(I don't know if this is a correct word,I'm Dutch you know) for tuning the loop.That must work,doesn't it?I can send pulses to the motor and it turns both ways.

Thanks for all the hints and tips.I'll have something to do the next couple of days,maby weeks.

Greetings from The Netherlands!

Does anyone have any info on this cb break?? Is it this weekend? Any info would be appreciated.
Thanks

Definition of the SuperBowl
If 10,000 CB'er's are on the SuperBowl
then only 1000 can be heard some of the times
& only 100 can be heard most of the times
& only 10 can be heard all the time
This is a great example why the bowl is not for the weak!

Amazing. It's ok for -you- to break the rules using an amp with a CB,
but in the newsgroup you want everyone else to obey the rules when you
are offended. You are a real prize, Linda.

What size power supply are you using? If it's too small, as could be the case
with the stock supply, voltage drop could be the problem.

Ken,
The most common cause of 'warbbling' on SSB is a
low, or very poorly regulated voltage from the power
supply. If the radio does it when powered from a
fully charged battery, then it's a fault with the
radio. I'd suggest you and your friend take a close
look at you're power supply's voltage while transmitting.
'Doc

This is a great application for my favorite analogy

Picture an OLYMPIC SIZE SWIMMING POOL labelled "THE CITIZENS BAND".

At the far end of the pool a bunch of guys are defecating and urinating in the pool. Many people see this and leave the pool in disgust. Whenever someone leaves, the guys laugh like hyenas and congratulate themselves.

ICECOLD: Ha ha ha! Did you see that log I let go in the water? It musta been a foot long!

PAINKILLER: Oh baby, you is a superstar, but I am badder! My log was at least 2 FEET long and real smelly! Ha ha ha!

MOTHER WITH HER SMALL CHILDREN: Hey you guys, that's disgusting! You're ruining the pool for everyone!

ICECOLD: What with all that whiny stuff lady? We at our own end! You don't like what we do? Then stay away!

MOTHER WITH SMALL CHILDREN: You idiots, your filthy excrement infects the entire pool, not just your end of it.

PAINKILLER: Thass a lie! You just jealous of our ability to take a dump in the pool, thass all!

ICECOLD: Yeah, allow us to explain how it works. If there are 10,000 people in this community, only 1000 can swim here some of the times, and only 100 can swim here most of the time, and only 10 can swim here all of the time!

PAINKILLER: That's why this swimming pool is not for the weak!

ICECOLD: You are weak, lady, so GIT!

(The MOTHER WITH SMALL CHILDREN leaves the pool area)

PAINKILLER: Ha ha! We iz the elite, baby!

This condition is caused from minute voltage changes on the varactor tuning diode on an oscillator. I have seen several reasons for this including, but not limited to:
1.) Regulated voltage source for varactor oscillator is malfunctioning.
2.) VFO malfunctioning.
3.) Improper mods to made to VFO circuitry.

This is a very annoying problem that certainly can be fixed...

Hmmm... isn't that a brain-damaged ass I see strolling up to the pool
to take a drink?

Dave .....whatever way you mount make sure that you attach a metel mast pole to the antenna for a better ground plane or counterposie or attach a radial kit. this is especially true if you want go DX results with the antenna. The I max 2000 is a vertical .....all vertical means is the antenna is mounted to be in an upright polarity.

Good Luck.

Charles kd4mao

The April and May issues of QST (the US publication of the American Radio Relay League - the Amateur organization) feature an antenna tuner that does precisely what you suggest. It uses memory and software to drive stepper-motors to adjust the tuner to a previous setting for the frequency range in use.

Might want to put the DC on a scope and look for oscillation in the voltage regulator. By replacing the original, you may well have put in a new one into a circuit without the bypassing needed to guarantee unconditional stability.

Think about it, an amp with a feedback loop is the definition of both a regulator and an oscillator.

A voice in the head says that there was a series of Nip VRs notorious for this kind of thing.

You never got the message that I view you
as way too big an asshole to have any sort
of productive conversations with--especially
here. The fact that you never take anything
from the newsgroup to private e-mail tells me
that you're more interested in attempting to
be clever and entertaining than you are in
seriously discussing anything.

Like I said, if you want to seriously discuss
anything, feel free to e-mail me. If not, just
continue to stay here and wallow in your own
misguided sense of superiority. I won't be
responding to any more of your posts here.

Dennis,
Thank you for your support. Bear in mind that estrogen can have a dark side as well. I would say our friend Linda might be a good example of what I am talking about. When I read that she was experiencing online harassment in the form of unwanted Instant Messages I emailed her privately. I expressed my concern for her well being and urged her to report the guilty parties her online provider as soon as possible. I believe that the stalking and harassment of women online cannot be tolerated any where in any form. I offered Linda my help and support in any way she might use it. Well, the email I received back from her IN ALL CAPS was seething with what I can only describe as insane hatred. In it, she accused ME of being George and Aaron and of 'stalking' her. She finished by threatening legal action. I tell you, when I got that email I was so upset I cried for nearly an hour! My husband say me crying and asked me what was wrong so I told him what had happened. I showed him Linda's email to me. His opinion was that the woman was simply mistaken. Then I showed him the posts in the newsgroup. Well his reaction to reading some of the things in here was just plain unprintable. Needless to say, both he and I think Linda might be in need of a good psychiatrist. Thank you Dennis for your good faith in women. You sound like a good man, but I think we may

have let you down in this instance. I can no longer deal with this Linda person who gives a bad name to all women who use CB everywhere, so from now on I will refrain from answering her postings or emails.

Aaron
I have come to the conclusion that this woman is mentally disturbed.
She thinks I am you and also two other people. She has posted the
headers of my email to her but SNIPPED OUT the text of my email. Here
it is for the record.......

Kathy

Hello I know it can be very difficult to find someone that knows what to do
but if need be send one up to me and I'll fix it and if you like it you can
send more but before you send it make cure the power from the outlet is
stable I had one that swears it was and it wasn't just a thought.

Why is there a lot of Cobra 25,29 and 148 NW series of radios on E-Bay.
Just curious. Are they just plain junk.

Mopar, Go Fuck youself, Now since you have had some grief in your life you
want
us all to suck your ass. You are not a good example of who we should
follow,
perhaps another night of profanity laced rage posts like the other night
will
follow tommorow, so you do what you have to do we will do the same. Reality
Check Suck my ass.
Go talk on your illegal Cb. You monkey spankin snapper head.

"Snapper Head" isn't that George's favorite saying! LOL!!!!
Again, he's obviosly Aaron and a whole lot of other alias out
here, man this guy has really got to get a life.....

Lay down snapper head, when I want to hear from an asshole I'll fart.

I thought this snapper head was ignoring me ... He lies again...

Who is George? And your a snapper head! Guess were even.

Of course it was a typo snapper head just like sd jones mistyped "tolling"
But i wasnt real anal like you who can only find stupid shit like this to
try and harass me. Nice Job!

Just as good as it makes you feel to be a snapper head, i say jump you say
how high.

wrong try again snapper head we are talking about the amp.

Check the Ip adress Snapper Head, I will call you on the Cb tommorow about
10 am. ok

Snapper Head if you want a response from me You first must make yourself
understood. I was posting way back when? You made 5 posts, which other 15
post are you talking about babbler? That sounds like one of your excuses you

left the terminal unattended. I have left you a babbling fool who makes no sense, get back to me when you have something good. You CB just ain't gettin out.

Truer words were never spoken, yes you are everything I am not. I am not a fisherman, I am not a Fool, I am not a Liar, I am not a snapper head, I guess you get the picture.

And now one of the best ones, George on his AOL account
using the screen name of RecRadioCbPolice:

> be clever and entertaining than you are in
> seriously discussing anything.

I have taken plenty of conversations to private email, just none of them involving you. And your conclusion (based on your assumed premise) is wrong: I'm not interested in being "clever and entertaining", I am interested in exposing bogus electronic experts, especially those that think they are some sort of technical genius because they have ripped apart a couple amps, and don't even have a working knowledge of basic electronics. Case in point, Bill: distortion does not occur because a pot is non-linear. Maybe because the wiper is dirty, but not because of the taper.

I get even more enjoyment when that tech-wannabe is a person that promotes RF piracy. But you are the icing on the cake, Bill. You declare yourself a "CB amp God" when you don't even understand the basic principles of linear and non-linear amplification. And you have also declared yourself worthy as the keeper of the rrcb FAQ when you hardly even post here anymore, as well as rewriting it to be more "freebander friendly" while minimizing the responsibilities of operating a radio and the consequences of doing so illegally.

You see, Bill, you are the quintessential keyclown. It's a pleasure to force you and your voodoo techo-bullshit into the shadows.

> Like I said, if you want to seriously discuss
> anything, feel free to e-mail me. If not, just
> continue to stay here and wallow in your own
> misguided sense of superiority. I won't be
> responding to any more of your posts here.

I don't doubt it, because you can't allow anyone to see how wrong you are on so many issues, technical or otherwise. Such a disclosure might hurt your self-proclaimed status as a "CB amp God". So I don't blame you at all for hiding behind the scenes -- in fact, I encourage you to continue hiding, because you have plenty to hide.

3573. Eitner's CB wisdom

Here's part of his AM tutorial where he touts the benefits of overmodulation:

"That's the bad news about overmodulation. Now for the good news:

Overmodulation increases the energy contained in the sidebands of the fundamental signal. If you'll recall, the sidebands are where the infomation you're trying to convey is contained. Anything that increases the energy contained in the sidebands will make your signal sound louder. The increase in sideband energy will increase the signal's range as well. Also, with voice communications, alot of distortion of the voice information can be tolerated. In other words, you can overmodulate quite a bit before the voice quality gets so bad that people on the receiving end begin to have trouble understanding you."

Sure thing, Bill. Make sure those keyclowns get that extra ten feet of range while bleeding three channels up and down. Now I know why you said, "Modulation limiters are for guys who don't know how to properly set mic gain controls." Yeah, crank dat knob all da way over! Dat will get ya heard, fer sure fer sure, its true its true! You be a SUPERSTAR no doubt.... with your neighbors, the FCC, and half the people on the CB just trying to have a simple, peaceful conversation. A "CB amp God" you are, Bill!

Except that my meter is NOT misadjusted. I have thousands of dollars
worth of test equipment, and do periodic alignments when needed on all
of my radios.

Besides, it's not just the signal level on the meter, it's the ability
to hear local people. 25 years ago, when the skip was running, you could
turn up the squelch and still talk to some local people over the noise,
within a 5 mile radius. During this last cycle, it was very painful to
try to pull the same people out of the noise, simply because the noise
is higher.

I really wish you guys would stop picking nits and face up to reality.
The reality is that the skip noise level is higher in this cycle than it
has ever been in the previous cycles. Solar data does not support the
contention that the propagation is any stronger (and in fact is weaker),
so the only remaining theory is that the noise level has been bumped up
by people running more power on average, then they were 25 years ago.

The scary part is that I actually remember that thread. One thing was
true, overmodulation will increase power in the sidebands; it makes them
wider.....

I agree completely. There are plenty of designs that are
technically biased into Class C in the classic sense, but
are used in a linear fashion. These amps are designed for

use in the carrier modes (AM/FM) only. They work because
the presence of a carrier developes enough of a "self-bias"
to bring the amp into linearity. During that time the amp
is NOT running in Class C. That's where the confusion is.
Technically the amp is a Class C amp because there's no
amount of power supply generated biased being applied, but,
with a carrier applied, there's enough of a self-bias to
cause linear operation.

> I notice this on my HR2510, when I turn the bias down a little too much,
> If I talk loud into the mic or just have the mic gain turned up, I'll
> sound pretty good. When I start to turn the mic down and talk quietly,
> then the "weak" parts of my voice (that aren't "loud" enough to get to
> that .7 volts on the base of that transistor) aren't transmitted at all.

With a SSB input signal there's no carrier to create the bias,
so
the amp runs in true Class C, and distortion results.

What kind of service info are you looking for? These radios were made FOR
Sears so they are also out there as different makes and models.

> it turns both ways.

If it is a true stepper motor you will have to find a way to drive it
correctly. Some of them need more than one set of pulses to drive them.
Changing the phase relationship between the set of pulses determines which
direction the motor turns.

Also be VERY careful about the tuning capacitor. The shaft on the capacitor
can be electrically connected to one side of the unit. The tuning capacitor
can develop a rather high voltage on it even using only a few watts of
power. The high voltage on the capacitor shaft directly connected to the
motor shaft could cause the field windings to break down inside of the
motor. You will need to find or make some kind of insolated coupling to go
between the capacitor shaft, and the shaft of the motor you want to use.

It was pretty much a "given" in those days that the cost of putting out
a reliable signal on UHF was considerably more difficult (hence
expensive) then it was on bands lower than 50 Mhz.

There were no repeaters then, and the simplex range on UHF was "dicey"
especially around areas with tall buildings and hills. These were all
considered when the decision to put class D CB on 27 Mhz was made.

>

There were always people who "pushed the limit" of the law. But the
percentage of those was far less than today. The presence and "fear
factor" of the FCC also kept most CB users in line.

> "Bad citizens" who succumbed to their natural curiosity wrt those strange far
> away signals. I read that there was actually a push to remove the 155.3 mi.
> limit on the CB as far back as the mid 70's.

By the 70's, CB was already lost as a personal business band, and had
become the "chit-chat" hobby band for the common folk. Talk of
eliminating the 150 mile limit, was a natural reaction to people
discovering the peak of cycle 21 and the ability to make long distance
contacts.

> Hopefully, this issue shall be
> revisited post-2003, if the Morse requirement is actually dropped.

In the FCC's eyes, there is already a service dedicated to hobbyists,
and that's Amateur radio. The FCC may turn a blind eye to what goes on
on CB, but it's doubtful that they will endorse it any time soon.

>
> Conversely, there were ALWAYS those (Whether hams, self-appointed radio cops,
> or both.) that frowned at this, declaring that "there can be ONLY one form of
> "hobby" radio!" HORSEFEATHERS!

That's certainly one opinion, and one that can be supported by
testimony.

> 11-meters has evolved into pseudo-hobby radio
> service, despite it never being intended to serve as such.

Correct, but that doesn't mean it was the proper thing to do.

> It has served as a "stepping-stone" for a great many hams and shall undoubtably
> continue to do so for many more future hams.

Also true, although there are many hams that won't admit it. Some hams
left CB for the very same reasons that they were first attracted to it;
The lawless, anarchistic attitude that made everything possible (albeit
illegally), slowly becomes tiresome to someone that becomes really
serious about radio communications.

> Sure the Tech ticket is easy, but it's not for everybody.

Unless DX is your lifeblood, you an do anything (and more) with the
privileges granted by a tech ticket, then you ever could on CB, and it's
all legal. More bands, more modes, more possibilities (Ever work the
space shuttle or moonbounce on CB?).

..and yes, there are lids on both services. In closing, people
> responded just as much to their curiosoty about "skip" back then as they do

> graduate of NYPD academy, class of 55...and do you know what? "Y'all" had just
> as many rotten apples back then...but you wrer certainly more discrete about
> it. ;-)

Yes, I remember a few "rotten apples" back in the 70's. Some were
Jekyll/Hyde types, that were normally ok people, until they had a few
too many "brown bottles". Some were clowns, that liked to tweek other
people for a few laughs. There were some that just threw carriers. But

overall, they were in the minority and some were actually entertaining
to some degree. You could usually leave the radio on with children in
the background and not have any worries.
Today, the type of "Lid" has changed. You still have common carrier
throwers, but you also have foul mouths, that have some sort of beef
with anyone that's not of their aquaintance. People who try to turn any
conversation into some sort of wierd sexual fantasy, and generally
people who are just "not nice".
Granted this is not the fault of CB radio, but rather a reflection of or
society's declining moral standards. But nonetheless, it shows up on the
radio, on both CB and on certain ham bands.

> >There already was a "CB" up on UHF, but it failed due to various factors.

> whiz...wow!" types.

But once upon a time, before cell phones and computers, it was a bit of
a "gee whiz" to have communications capability in your car. Non-radio
friends that I had in the 70's seemed intrigued that I could talk 10 or
20 miles from my car. Some so much so, that they bought their own.

>
> >People were morethan willing to obey those rules for the privilege of
> >using a radio to keep up with the family or run a little business.
>
> I'd say 50/50.

Willingness to obey the law has been slowly declining along with
society's moral standards. There was a time, when many people obeyed the
law without question. as that was the way law abiding people behaved.
Today, you have people arguing that breaking selective laws is not a
criminal thing, if they have a good reason for disagreeing with them.

This is also true. The mind filters out many bad experiences, as it
prefers good ones.
That being said though, you have to acknowlege that the moral character
of our society in general, has declined considerably in the last 30
years. It's not a great leap to conclude that these same declines would
affect operations on radio services (Which are just mirrors into
society).

Trust me, there was no way they could have made a UHF radio "affordable"
back then. Initial prices of class "D" Cb radios were much higher
(especially when accounting for inflation) were high enough (A 23
channel "no frills" radio cost me $100 in 1974, and a Cobra 135 base
went for over $400). UHF radios were easily double that. The technology
just wasn't there yet.

> icom or yaesu in my future...if you catch my drift......elpasogunslinger

"Warbling" or FMing of the VCO is usually the result of the VCO voltage varying slightly in proportion to modulation. When you modulate a radio (Whether AM or SSB) you tend to draw more current from you power supply, and that can cause your input voltage to drop a bit. However, the VCO has an internal regulator (Usually either 5 or 8 volts) to power the voltage sensitive VCO circuits. It would take a large drop in supply voltage to affect the internal 5V buss.

In the Cobra 148, there is a 8V regulator that goes bad. When it does the voltage rises to about 11V. Warbling is a common symptom. I would check the regulator that supplies the voltage to the VCO section (There should be 2 loops in the RCI radios), and make sure that they are delivering the proper voltage.

Sometimes "mods" done improperly will also cause a "warble". Extended clarifier mods are the most subceptable to warbling problems.

Another common cause of FM'ing is RF feedback. Many times, certain radios will couple an unusually large amount of radiated RF back into it's VCO section, where it is rectified and modulates the VCO voltage. This is very hard to properly diagnose, as the radio will usually perform fine on the bench, with a dummy load or an antenna that is mounted 100 feet away. But in the car, or on another's setup, where the

RF field is stronger, the problem occurs. An amplifier can exacerbate the problem. The cure is usually grounding of the radio chassis, or antenna, or moving the radio away from the antenna. In some cases, internal shielding can be adapted.

If this is a commom problem in 2990 radios, there may be a design flaw. Hopefully, you'll get to the bottom of it.

>true, overmodulation will increase power in the sidebands; it makes them
>wider.....

Actually it doesn't increase the power in the sidebands at all (that
is, it will not increase them beyond the max of 25% per sb). The only
thing overmodulation does is convert intelligible audio into noise:
the power is redistributed from clear audio into distorted audio, so
the intelligible part of the signal is actually weaker when
overmodulated.

The reason some people think overmodulation sounds louder is because
the distortion is actually the harmonics from the audio. Because the
harmonics are so closely related to the audio, some of them will add
to the overall voice level when the overmodulation is low, but really
muck things up when the overmodulation is high. Low or high, the
harmonics will escape the bandwidth of the channel and be heard where
they are not supposed to be heard.

Wow! It's the same as Aaron, also the same as this Kathy
Do you think it Aaron's Wife then? LOL!!! The extent
that George IE: Aaron will go to make people believe
him, truly is the mind of a sick person LMFAO!!!!

3594. 18 Demands For Illegal Keyclowns

Newsgroup: rec.radio.cb
Date: 2002-05-09 14:15:51 UTC
From: VOOBUSCH <voobusch@comcast.com>
Message-ID: <rwvC8.108258$q8.11407822@bin3.nnrp.aus1.giganews.com>
Source record: 123458

18 DEMANDS FOR ILLEGAL KEYCLOWNS

1. Stop using illegal equipment to commit unlawful acts of bootlegging, high power operation, and splatter against CBers in the legal 40 and government and private users in the so-called freeband which keyclowns illegally occupy.

2. Obey FCC Part 95 Subpart D. End occupation of the freeband, the CW portion of 10 meters, and all frequencies below 26.965. End Keyclown illegality!

3. Obey FCC Rule11 - Linear Amplifiers. You may not attach the following items (power amplifiers) to your type-accepted CB transmitter in any way. Allow lawful, legal CBers to return to the CB band, a band from which keyclowns drove them illegally over the past 25-plus years.

4. Stop promoting illegal keydowns as a recreational sport.

5. Stop promoting illegal freebanding and bootlegging as a hobby.

6. Stop acts of radio piracy which deprive lawful radio hobbyists of a positive public image.

7. Stop the institutionalized "outlaw" predjudice which treats legal CBers operating legally as second-class citizens while denying them operating rights in their own band.

8. Allow true freedom to promote legal CB.

9. Allow true freedom of speech for those who speak out against illegal CB.

10. Stop building illegal amplifiers and distributing them.

11. Return all frequencies illegally seized.

12. Recognize the existence of the FRS as a "no linear" zone.

13. Allow a peace-keeping force from the ARRL into rec.radio.cb to provide for the protection of legal CBers against acts of keyclown-sponsored aggression.

14. Apologize to proponents of legal CB for acts of aggression the keyclowns have committed against them for several years.

15. Apologize to innocent parties such as Dwight Stuart, Glen Sparks, etc. victimized by the keyclown's acts of aggression.

16. Turn TRA1N over to the FCC so that he may face justice for his radio crimes and crimes against legal CBers.

17. Accept responsibility for illegal operation.

18. Accept responsibility for the fact that keyclown aggression against the anti-keyclowns and others are the direct cause of continuing strife in the newsgroup.

The interests of illegal operators does NOT outweigh the needs of legal CBers.

The law-abiding CB operators are adamant that the keyclowns, bootleggers, and pirates immediately cease mistreatment of users whose frequencies they occupy illegally.

>From: joxendi@bellsouth.net (Jerry Oxendine)
The comparision to radio is this. There are people who want to do radio "their" way which means the lifting of any restrictions on frequency, power, or distance. <<

There is NO comparison except by hammies.
Once again it is only certain people "claiming" this is the case. It's always "people" do this,,,or "people" say this, only it never actually takes place in here among these pages for any to see.. all that are to be found are the claims themselves, so I fail to see the relevancy of the continued comparing of "hammie vs. cb" bullshit
that is always reiterated in a cb forum by hammies with an ax to grind.
Don't get me wrong, I'm certain that such behavior exists, as we see a small but disgruntled presence of angry hammies here that are overly concerned with cbers and they work diligently at maintaining a constant line of intentional separation...,,,,look hard enough and you will find anything it is you seek, but I find it perplexing you focusing on a minority that causes this grief you speak of, especially since no trace of these types are readily present among us, other than us admitted DX talkers who are lumped in with felonious committing anarchists by certain "hammies".
Do these type exist on the air? Yes, they do, and (gasp) a percentage of them are licensed.

>There are
already avenues of doing this, but "they" don't want to abide by the rules that govern it, <<

One can tune in and see the hammies popped each month who wish to not abide by the rules of their government.
Because someone wishes to talk DX does not mean they use 100,000 watt amps, or call for the lifting of "ANY" restrictions or commit felonies.
This sounds like strict adherance to the utterance that says selective disobedience of any rule makes one a criminal and leads to subversion, unrest, and civil anarchy."

>or take tests to ascertain their understanding of RF characteristics and/or theory,<<

You have them in your ranks just as we do.
I'll even go as far to surmise there are more hammies talking on cb with their hammie rigs than there are unlicensed cbers talking on hammie freqs. Cb doesn't require a license so why should one be concerned whether a mere and lowly cber understands RF theory?
As Lelnad related, one doesn't have to be female to have an opinion on abortion,,the pendulum goes both ways,,,,one doesn't have to understand

TV propagation to watch it, and no license is needed...no license for cb is required and there is no reason for cbers to HAVE to learn this stuff, otherwise the license would still be issued and more stringent requirements passed. The dropping of the required cb license and the FCC's passiveness toward such issues show such alleged problems are highly inflated among these pages.
The mere notion that a hammie has the need to compare himself to a cber speaks clearly enough, and we have those that do it on a regular basis..imagine.

>or their
ability to engage in their hobby without offending their radio "neighbors". They see no harm if they interfere with someone else--they put them down as a "mudduck"--and it
becomes a matter of who can be King on the Hill. Their "knowledge" of radio means
everything over to the right, pegged out, loud and proud, and the idea of co-existing with
other operators at the minimum of power needed to establish contact is foreign to them. No, they don't "kill" people like the drag racers, but they can delay, hinder, and stop
traffic from being passed that is still important.<<

Infinite possibilities and scenarios abound concerning every conceivable topic.

> They cite the bad ham ops who are, indeed, a problem for the Amateur Service, but do not represent the majority of hams.<<

You cite the bad ops who do not represent the majority of cbers...not much difference.

>They stick out because they are unusual and draw attention that the regular operator does not. They are the people that should NEVER be allowed to get near a radio, and,
yes, tests do not an operator make, but testing and effective enforcement are the only tools we have.<<

Testing isn't all that effective, Jerry. If one were a stranger to both services and read your post, one would interpret it as no problem ops exist on hammie freqs.
Testing does virtually nothing to weed out bad ops, or you guys would be self-policing the way it was intended to be and wouldn't have a need for a Riley. The ugly reality of the situation is that over time the amateur has proved and demonstrated self-policing of his own bands do not work. This is only a single reason why so many cbers laugh like hell at the hammie that comes in here demanding respect, especially he who wishes to "police" cb, feeling he should be recognized for an acquisition of something that impresses only he.

> I cannot understand what that minority of operators gets out of acting like

a child. I often wonder if they had/have children, and if they ever correct them for bad behavior.<<

I just have to ask Jerry, do you think the behavior among these pages by certain hammies is any better, or would you rather just compare errant cbers and their behavior and not wonder about whacko hammies?
The amateur community is well represented here, but look at by who and what they present as an image for hammies...it ain't good, even the newbies are turned off by your alleged brethren.....it ain't cbers calling newbies names and hurling insults toward them....who is causing grief here, Jerry? Can you even bring yourself to comment on it, old man?? Or are you one of these hammies that feel idiosos like Lelnad and George and Dogie suddenly right themseles when they key the mic?

>Seems like they don't even have the right after acting like that themselves.
No doubt, changes will come to the CB service, but I still believe that it is unlikely to be
in the area of relaxed rules that allow it to become a parallel "hobby" service to the Amateur bands. It would be more likely that it could get "moved" up into VHF as public
entities move to 800 and trunked services--not an easy task since those who insist on working DX would be loathe to give that up. <<

Any moving up would include a "phase-in" period, likely taking years.

>Issues such as the trucks who operate up
in 10 meters make it harder for concessions to be justified.<<

Who has asked for concessions, besides the DX rule?

> Opponents will point out the
huge amps, etc and throw up other roadblocks to additional privileges to CB. just MHO, but I don't think CB will ever get any changes to the existing rules. Operating a
radio is NOT a right, it is an accorded privilege. The restrictions that exist are there for
a reason; to protect all users from interference and allow the most effective use of all the
spectrum by all the people. Just throwing open the gates, letting anyone and everyone just operate DX, run power, etc will just cause chaos. Therefore, it isn't likely to happen.
Jerry<<

Agreed. No one ever asked for more power,,,, Lelnad just claimed (lied) it, nothing more.
It is another figment of Lelnad's warped psyche that he manifested out of thin air,,just another ignorant lie in a long line of bullshit he tries to spew in order to feel better of his loathesome self.

Today, you have people arguing (snip)<<

BS! Clarify it for truth and accuracy...Only "YOU" and the few like you have people arguing about breaking selective law,
as only you and a few of your ilk confront these "people" with insults concerning their behavior, begging for a justification or a reason why a grown adult chooses to not be a clone of your tunnel vision. You confront and attack these "people" and any reply you receive is labeled as "arguing". You're full of lies..no one argues concerning these mundane rules without an angry disenfranchised lid not unlike yourself, instigating or starting trouble.

>arguing that breaking selective laws is not a criminal thing, if they have a good reason for disagreeing with them.<<

Yes, you already shared your beliefs that anyone who commits a rule infraction of any kind is a criminal. Not many agree or see it quite as you do and this seems to present an issue you must deal with.

3599. Re: Need Cb Antenna Advice... Best Base Station Antenna???

Newsgroup: rec.radio.cb
Date: 2002-05-09 15:01:12 UTC
From: ozark333@aol.comnojunk
Message-ID: <20020509110112.10595.00006961@mb-ml.aol.com>
Source record: 123465

Are you talking local or skip?
For local a vertical antenna is best.
For skip, most operators, prefer horizontal.
But if skip is the choice most beams come both vertical and horizontal. An omni for skip works well but will pickup signals from all directions and may receive unwanted interference(signals that interfere with the station you wish to hear). Horizontal also cuts down on noise received.
Do you want to be directional?
If so, How much room do you have?
Beams come in 2 element (Quad..a good choice) or up to 8 or more elements (very large and a heavy duty rotor and guy wires required not mention a tower or support structure).
If omni-directional is OK try a 5/8 ground
plane type antenna. The angle of radiation for these antennas is optimal.
Any more questions???

"If it aint broke, don't fix it"

(sigh) Yea, I know it's illegal to sell an amp, Lelnad, and your
half-assed attempt at
snipping a post to make it appear as something else is old hat and
everyone is on to it.

>Just fess up Twisted that you got your tail caught in the door jam so
to speak, and it hurts. 8-))<<

More like YOUR tail, seeing as even the hammies are now calling you on
your poor technique of intentional snipping of posts to change the
context.

>It's fun to see to what ridiculous lengths Twsited with go to in
support of his half baked ideas.<<

There was no idea, just you being shown that yoursorry attempts at
trouble have the same effect you do in the rest of your troubled
life.....impotency.

> Besides all the time he wastes looking for back posts of mine in the
archives>>

Oh, I don't look in archives, Lelnad, but I understand your attempt at
self-flattery at this stage in your anger-filled life...I merely save
your junk that is directed toward myself, such as the death threat that
got you dropped from supernews, your forge (the one that caused you to
lose UUnet), your multiple forges (ynn and newsranger) and several
others that were responsible for your lost access sites no less than a
dozen times last year.

>in the vain hope he find something to embarrass me with, or
responding to evey post I make, <<

Everything you say is BS. Tell you what, if it bothers you so much that
I reply to everything you post, try an injection of non-insultive
self-control, topic relation, pertinent informative post that doesn't
intensify your ignorance or instability.

>keeps him inside and away from molesting the neighborhood kids.
--
Leland C. Scott
KC8LD0<<

You really must take a vacation, Lelnad. Such thoughts have an origination point, you may want to seek professional input, as the molestation of children is no joking matter, but anyone that is familiar with you is aware that such ideas in your mind are nothing new to you. Now everyone else can pity you as much as I do. Hell of an image you present to the public masses for amateur radio..as has been pointed out to you several times by cbers and amateurs alike...you are a part of the cancer that plagues amateur radio...it's a blight to the service that you even post a call next to your demented thoughts concerning children and sex.
Now do what you do best, post a forge or 2 or change the topic and try to save what little face you have left, as your self-respect has left you long ago. Don't bother replying, I just wanted to share your unique elmering ways with the real amateur community.

3602. Re: Eitner still hiding in seclusion

Newsgroup: rec.radio.cb

Source record: 123468

Sparky seethed with:
>You see, Bill, you are the quintessential keyclown. It's a pleasure to force you and your voodoo techo-bullshit into the shadows.
Like I said, if you want to seriously discuss anything, feel free to e-mail me. If not, just continue to stay here and wallow in your own misguided sense of superiority. I won't be responding to any more of your posts here.
I don't doubt it, because you can't allow anyone to see how wrong you are on so many issues, technical or otherwise. Such a disclosure might hurt your self-proclaimed status as a "CB amp God". So I don't blame you at all for hiding behind the scenes -- in fact, I encourage you to continue hiding, because you have plenty to hide.<<

Well, if that don't beat all! Hey Bill, you oughtta be heap big proud! I never, and I mean NEVER, have seen Sparky so jealous of another tech than he is here with you!
Congrats!

3604. WORM_KLEZ.G Virus

Newsgroup: rec.radio.cb
Date: 2002-05-09 15:44:52 UTC
From: "Dennis W. Ostrowski" <dwostrowski@lucent.com>
Message-ID: <3CDA9974.B53C47FD@lucent.com>
Source record: 123472

FYI......

In the last 2 weeks I have received over 30 e-mails containing this virus:

WORM_KLEZ.G

The most frequent sources being:

ogp@texoma.net
cv3@keyway.net
hacogroup@earthlink.net

Whoever is doing this is just wasting both their time and mine because I am running Unix under Solaris on a Sun Ultra-30 workstation and the virus has absolutely no effect on it.

Windows viruses have no effect on a Unix box running a non-x86 processor!

Any DOS or WINDOWS stuff I may do is only an EMULATION, not the real thing!

Regards,

Dennis O.

What happened? You give up on Doug, etc. blaming them for all of your life's
silly little problems? It seemed you were so sure fire sure they did it.

> and several
>others that were responsible for your lost access sites no less than a
>dozen times last year.

That's very funny Twisted. I'm sure who ever it was that lost their access
had a few problems, however I never lost my access. You're going to have to
try harder, and maybe if you didn't get so high from sniffing that "jock
strap" collection of yours those visions of "saucer men" you keep talking
too would quit. Otherwise you're just a hopeless, and clueless clown on this
news group. The only reason I even bother to respond to your idiotic posts
is to keep you posting more funny material to read.

I'll tell you, this group is for the birds. If it weren't for a couple of trolls it would probally be a nice place to hang out, but it's not thanks to people like this George person. I come out here and make an opinion and right away he starts to attack me, not only under his screen name, but from the evidance thats been posted here as of late, Aaron voobner, RecRadioCBPolice and I'm sure others. If I wanted to deal with a bunch of city agitators, I would go to the city, but you are nothing less than a mental case. This George person and yes I'm singling him out because when I see evidence that has been posted here, showing him to have what he doesn't claim to have, showing me posts that he has signed as -A-, looking up inverse addresses to see that this "Kathy" is the same as George/Aarons address, well it just shows that he is nothing more than a sick troll, with absolutley
no life whats so ever outside of this group. Legal or not. I 'm out of here. No more e mails as I will forward all to the proper tos for investigation.

On November 14, 2001, the license for Jack Gerritson, KG6IRO, granted on November 8, 2001 was set aside after the Commission received information that he had been arrested and convicted in 1999 for radio interference to the Los Angeles Police Department and that he was out on parole after serving one year of a 5 year term.

Gerritson continued operating and causing deliberate interference to numerous Amateur radio repeaters in the Los Angeles area.

On January 29, Los Angeles agents participated in a pre-dawn arrest of Gerritson, in response to complaints of death threats made by Gerritson on 2-Meter Amateur frequencies. A no-bail search and arrest warrant was served on Gerritson for violating the terms of his parole, which prohibited him from possessing radio-transmitting equipment. Gerritsen, at the time of arrest, had over 20 radios and 8 were capable of operating on frequencies in the Amateur, Marine, Land Mobile and Public Safety bands.

He had a Marine radio hidden in a closet with batteries connected to it, and a length of antenna line running outside his residence.

---

boy these hammies sure need to be on here preaching .....hey clean up your own bands , then you can come on here whining about cb stuff.....sdj is down.....what you goin to do????

Woah. Stop right here. Let's take a gander at how "Linda" introduced
herself to the group.

Message 1 in threadFrom: Linda McGrath (bildirt25q@aol.comNOHATE)
Subject: Why such Hate???
Newsgroups: rec.radio.cb
View this article onlyDate: 2002-05-02 11:24:13 PST
I've been lurking here now for a couple of months and I have to say
there are
some really sick people here. This George fellow need to get a life.
He
constantly berating people, harassing them and making some out right
rude
comments. Aaron, while his intention is noble, goes about it the wrong
way. You
don't go into a bee's nest and ask them to stop stinging, that's just
nuts. Now you can say what you want about the cb, but I have been into
the radio for over
25 plus years and have never heard troublemakers there, like I have
here.
Aaron, you can continue to say that linears and export radio are
illegal,
nothing wrong with that, but the always trying to put an illegal spin
on
everything is not productive at all. George, nothing I can say will
help you, you need to get some immediate mental health help. You have
been HARRASING EVERYONE! Only one thread did you talk about the
subject, but every other thread you are calling people names, you sir
are a TROLL! some poor girl asked for help, what do you do, make it
your own personal vendetta thread. I have looked at the archives and I
can tell everyone honestly, this George Fellow and Aaron are nothing
but a couple of trolls looking to cause trouble.

LOL. Poor Linda. After she posted the above "opinion", she was SHOCKED
by George's impolite response.

But wait....it gets funnier.

> not only under his screen name, but from the
> evidance thats been posted here as of late, Aaron voobner,
RecRadioCBPolice and
> I'm sure others.

The "evidance" is IP numbers that don't match. LOL. Too funny.

But wait, there's more....

>If I wanted to deal with a bunch of city agitators, I
would go
> to the city, but you are nothing less than a mental case. This George
person
> and yes I'm singling him out because when I see evidence that has been
posted
> here, showing him to have what he doesn't claim to have

What doesn't he claim to have? (Three kids? A vagina?)

> showing me posts that
> he has signed as -A-

Oh yeah. That's conclusive. Open and shut case. (LOL)

>, looking up inverse addresses to see that this
"Kathy" is
> the same as George/Aarons address,

...and just ignore the IP numbers that don't match up. LOL

>well it just shows that he is nothing more
> than a sick troll, with absolutley
> no life whats so ever outside of this group.

I can see the newspaper headlines now:

MOTHER OF THREE ABANDONS CRUSADE AGAINST LEGAL CB!

> Legal or not. I 'm out of here.
> No more e mails as I will forward all to the proper tos for investigation.
> Linda

Don't you hate it when a plan falls apart?

LOL.

-Aaron-

another post from comcast......man isn't there anyone with a comcast
account that isn't a dipshit.......too bad that luke john helder
didn't drop off one of those special packages in the mail box on devon
circle in allentown.........and that..........is my roger.........no
doubt about it.............what ya goin to do?????? sdj is down......

ok sparks.......two guys line up in their suburbans side by
side.......they both key up and start rappin.....one guy is heard over
the other at a base station 25 miles away......question...please give
a esoteric explanation for this.....sdj is down.................

Hello, Vipul Shah, KB1HMW here. I might be taking summer courses in Maryland (if I get accepted). Any electronics amateur radio enthusiasts interested in doing a summer design project or
design study in the rf area? Perhaps towards amateur radio certification? I currently am in Massachusetts.

"warbling" on s.s.b.!!!

------------snipped----------------

I've been out of CB long enough now that I dont recall if
these are mobile units or bases.

If theyre mobiles are you using them as bases? If so, is the
radio mounted next to, or on top of a power supply?

I ran into a problem with a few radios that were mounted on
top of a power supply wherein the magnetic field of the
power transformer was inducing a voltage into the radios pc
traces. The induced voltage was very unstable because it
varied at an audio rate. The effect was most noticeable on
ssb but was present on am as well.

Hey twithed,
nice to see you respond so quickly when somebody cracks on yer gay lover.
Which one of you faggotboys is on the bottom tonight?

Hey, go back to being 1mangayboy, you was lots funnier then.

Dam its good that some one else knows about how to trouble shoot a radio problem instead of just changing out parts. To be a good repair person you almost half to be a good circuit designer, and this helps to understand how a circuit works. With this knowledge repair is a natural, not just guessing, and changing out parts for the hell of it. These are the techs that cut diodes, crank pots all the way up, and form a badly clipped audio just to sound loud.

"Twistedhed" <twistedhed@webtv.net> wrote in message
news:12399-3CDA8FD5-76@storefull-2317.public.lawson.webtv.net... <<

Oh, I don't look in archives, Lelnad,

>Not any more once you figured out you're not going to embarrass me with anything you dig up there.<<

Drop the paranoia...no one is concerned with embarrassing you..but since you're sharing your obvious preoccupation with fear of being continually embarrassed by another, no one can do as good a job embarassing you as you do yourself, so I assure you once again, there is absolutely no reason for you to worry about any other.

I merely save
your junk that is directed toward myself
such as the death threat that
got you dropped from supernews, your forge (the one that caused you to lose UUnet), your multiple forges (ynn and newsranger)

>What happened? You give up on Doug, etc.<<

Doug, "etc.," (Lelnad = etc.) gave up on losing their posting privileges, sort of like you.

> blaming them <<

You are part of "them", Lelnad. You made repeated threats to the group on Dogie's behalf.
I blamed you for what you did, and so did many others. Again, your threats ring hollow and your words are tripe..you're i-m-p-o-t-e-n-t. :))

>for all of your life's silly little problems?<<

It never ceases to amaze me the weight you lend to minute and mundane trivial, harmless fun. (Hint: "silly" and "little" are not equated with "life problems" except by small minds not unlike your own. Not actually having a life, you aren't readily expected by anyone here to fully understand.)
Was being voted in the top 5 of the rec.radio.cb death pool what made you soil yourself again? C'mon Lelnad, it's harmless fun,,,,,no one really thinks you are going to blow a gasket and stroke and die,,,,well, not prior to Dogie anyways. Here's where it stands now, your last temporary suspension due to the termination of your access to the group actually worked in your favor, as you fell a notch and are now tied with

Sparky.

Regular posters voted most likely to die while posting to rec.radio.cb due to myocardial infarction or cerebral vascular accident. Amount of votes received follows.

1) N8 14 out of 39 responses
2) George 9 out of 39 responses
3) Sparky/Aaron 8 out of 39 responses
4) Lelnad C. Scott 8 out of 39 responses

390 bucks in the pool up for grabs.

>It seemed you were so sure fire sure they did it.<<

Sure..the emails received from the ISP's made me sure, especially your supernews and UUnet account suspensions along with the letter of apology that accompanied each.

>That's very funny Twisted.<<

Yes, it is, but nowhere near the magnitude of your hallucination of gainful employment.

> I'm sure who ever it was that lost their access had a few problems,>>

Yep, multiples. You were warned twice by UUnet in the last 4 weeks before they canned you. I also have the email of the free-trial you tried, you know, the one that warned you concerning your disrespect and insurgence for the AUP rules,,the one where you canceled your account after the warning.

> however I never lost my access. <<

Then what I say shouldn't matter, besides, it's not me that you have to convince, it;s the throngs of people you have managed to make yourself into a monkey in front of...personally, I don't really care that you claim you willingly change servers after each and every ISP violation and the fact that your headers change more than any other (save for George) can be attributed to mysterious powers of the universe.

>You're going to have to try harder,<<

Your self-flattery has deluded you into thinking one "tries" anything with you, Lelnad. You're not a 'try" type guy,,,if you were, you would know code by now and wouldnt have to resort to filing trivial persuits with the feds that are designed to fail. You want the feds to give you something you can not master on your own. It;s not hard, lelnad,,with the time you put into petitioning the feds to remove an obstacle you can't master or are too lazy to achieve, and a fraction of the time you spend here bathing yourself in fecal matter, anyone could have learned code several times over.....matter of fact,,,,,several even did..
You're merely akin to a wind-up robot that runs into walls and needs repositioned in order to maintain any sense of common, but this means

nothing to the one that claims "common sense is nothing more than a belief."

>and maybe if you didn't get so high from sniffing that "jock strap" collection of yours those visions of "saucer men" you keep talking too would quit.<<

Your anger is showing again, but the ignorance behind it is sooooo worthwhile.

> Otherwise you're just a hopeless, and clueless clown on this news group. The only reason I even bother to respond to your idiotic posts is to keep you posting more funny material to read.
--
Leland C. Scott
KC8LDO<<

Well, alrighty then,,,,now that my education of you today has resulted in you finally comprehending that I post with no regard to you, "why" should be of no issue or importance to you. Your debilitating need to explain speaks more than the actual words you attempt but fail to form,,,your temper rants, uncontrollable anger, and uncanny ability to reduce yourself to new lows is as certain as the rising sun. Deterioration is your only constant.

Sometimes, the solution is as simple as installing a current choke on
the coax.

So Dave, do you really think that there are enough CBers running enough power to raise the noise level by 10-20dB? I did notice you forgot to address the point of 50KW+ transmitters and amplifiers. The average guy running 100-400 watts surely does not account for the increases that you have claimed. I was there during all three of the cycles that you mentioned, and yes, there were times that the band became almost useless during the daytime. Not to be rude, but I think your memory might be the constant that is failing in this equation. <<g>>

I have read all the info on the Solarcon Imax 2000 the 5/8 wave 11 meter antenna at http://www.qsl.net/kg6aoh/imax2000/ .
This is an excellent article and the author also 'breaks down' the Antron99. My question is I don't like loading coils or traps such as in the Imax 2000. I found the old 'starduster' now called the 'Skylab found at http://www.cte.it/cte_obj_e.pl?nome=SKYLAB&codice=T233&tipo=C and also at http://www.copper.com/cgi-bin/checkitout/checkitout.cgi?catalogSTORE:CKIE:prodS80-00002+ This quarter wave design is claimed to produce 7dB gain?! How can this be. Can ANY quarter wave antenna have gain. What would the TRUE gain for this antenna be? The center element is 1/4 wave for 27.195 MHz with three 1/4 wavelength radials drooping at slightly more than 45 degrees. If you add up all the element lengths they total 1 wavelength. Is this important? What if there were four 1/4 wave radials for the 'ground plane' would this be better? In fact I thought that a proper 'ground plane' or 'counterpoise' would need to be at least of one wavelength meaning 4 not 3 radials? Is this so? I am attracted to this antenna because of the lack of any 'lossy' matching networks like in the Imax 2000. At http://www.qsl.net/kg6aoh/imax2000/ the author states that the Imax has a true gain of 0.8dBd (2.9 dBi), and increasing to 1.1dBd (3.2 dBi) with a proper ground plane counterpoise system (which looks like the Skylab radials only there are 4 not 3 of them). Does the lack of any matching network make the Skylab antenna a better performer than the Imax 2000. What do you think?

dbi and dbd are two different things. dbd is referenced to a 1/2 wave dipole (0 dbd). dbi is referenced to an isotropic radiator (about 2.1 db higher then dbd) An isotropic radiator does not exist in the real world, only as a mathematical equation.

A 1/4 wave ground plane is a 0 dbd antenna. It is really a 1/2 wave dipole with one half attached to a ground plane and one half (1/4) attached to a radiating element. The use of the ground plane and radials at a 45 degree angle, allow the direct connection of coax, an UNBALANCED conductor. Dipoles are balanced and require twisted pair or some other kind of balanced conductor or a balun.

Stay away from the cheapo antennas. Buy a Maco V58 instead. CTE is Italian crap. My second choice would be the Imax 2000 with GP kit.

Without consideration to supply regulation, final output power,
transmission line losses, antenna efficiency, ground characteristics,
and any reflection/refraction/diffraction of surrounding objects
(including aircraft), I would have to say that one of them had a much
more intense orgasm than the other.

The reason for multiple elements on a ground plane is to provide a
very low point of impedance for the radiator to "push against".
Generally, the more elements in your ground plane the better. But at
some number it reaches a point of diminishing returns, and any more
than about 12 elements isn't going to do much at all for your antenna
except make it heavier.

>... I am attracted to this antenna because of the lack of
>any 'lossy' matching networks like in the Imax 2000.

Some matching networks have a small insertion loss, but that loss is
usually insignificant compared to the improved performance to be
gained by proper matching. But be careful, because some so-called
"matching networks" can be very lossy -- I have an old mobile CB
antenna on the shelf that has nothing more than a resistor for it's
"matching network".

JEEPMON,
The coils in both the A99 and the Imax aren't
'loading' coils, but are impedance matching coils.
There is some loss in them, but not really enough
to make ~any~ difference as far as someone listening
to you could ever tell.
The gain figures from the vast majority of antenna
manufacturers is pure 'BS', to put it mildly. They
never specify what they're comparing their antenna
to. To get a 7db gain from a 1/4 wave antenna, they
have to be comparing it to a beer can laying in the
yard. Most 'real world' 1/4 wave antennas have a
negative gain figure when compared to a 'standard'
antenna.
I'm not familiar with the 'Sky Lab', but if it's
a 1/4 wave as you say, then it has no gain compared to
the 'A99', or the Imax. The number of radials used
makes very little difference, they still take the
place of 'ground'. And the 'drooping' of the radials
constitutes a 'matching' system of sorts. [A groundplane
antenna just means that the antenna uses a 'groundplane'
(those 3, or 4, or 12 for that matter, 'spokes' radiating
from the feed point) for the other 'half' of the antenna.]
The gain figures quoted for the Imax are probably as
close to correct as you'll ever see. I'm not so sure about
the increase of gain with the use of a 'groundplane', but
I guess it's possible. If the 'Sky Lab' is a 1/4 wave, and
the Imax is a 5/8 wave antenna, then the 'Sky Lab' should
come out the looser by comparison.

3680. An Odd Sort Of Equilibrium (And Other Observations)

Newsgroup: rec.radio.cb
Date: 2002-05-10 04:32:02 UTC
From: aaron_voobner@yahoo.com
Message-ID: <7314c094.0205092032.239fbc3a@posting.google.com>
Source record: 123546

If you've noticed, this newsgroup is, for the first time, experiencing a balanced state. That is to say the keyclown and anti-keyclown factions are represented in equal doses and held in a delicate symmetry by the force of each others opposing convictions. Rabid keyclowns are met by equally rabid antikeyclowns who grapple on the trench warfare level, armed with aliases, flames, and all manner of dirty tricks. Moderate keyclowns are balanced by moderate antikeyclowns who engage each other more genteel, yet often protracted technical and moral debate. Conservative keyclowns meet their opposites in conservative antikeyclowns who only engage in the mildest of conflict and often appear to be old friends rather than bitter enemies. Yet the dynamic remains the same: balanced. I believe this new equilibrium is a much more democratic environment than the bad old days when outlaws and keyclowns reigned supreme in rrcb. Eitner, Ostrowski, and Sean have retreated to the far recesses of the web, taking their quasi-technical-voodoo-cb tyranny with them. People named "doc" and "professor" still lurk here, but the newbie now has a wide spectrum of voices and experiences to choose from, rather than a repressive axis of self-proclaimed experts to contend with.

Greywolf, welcome to the wonderful world of Twistedhed. The "see n'
say" response you see above is typical of his posts. It goes like
this...

TWIST: It's true because I said so.
YOU: You said what?
TWIST: See? you're angry.
YOU: No I'm not.
TWIST: Yes you are.
YOU: That's not true.
TWIST: It's true because I said so.

etc.

Well, there's a whole lot of stuff that can be adjusted. There are
probably a dozen pots and twice as many transformers. If it looks like
it can take a screwdriver or hex wrench, it's probably adjustable.
What is it you want to adjust?

Hey All,

I have a Kenwood MC-80 mic, this is a (kenwood) standard 8 pin and I want to plug this into a RCI 6 pin mic input. I have a very crappy cable wired, and it seems to work. I have seen pre-built mic adapters and I'd like to find something a little cleaner and more professional then my hack job.

Thanks, Art...

6-pin female jack w/ terminal end heat shrunk to 3 or 4 feet of Canare L4E6S cable to 8 pin male plug. Or mount the 6-pin female jack in a tiny RS mini box. Follow the pinouts in the Kenwood and RCI (ugh, I hope you're operating it legally, my friend) manuals. Oops, I forgot, I'm not supposed to be technical. Never mind.

WRONG! The reason is so that radiation is prevented,
because opposing fields are generated in the various
elements of the ground plane.

It looks like a sturdy, high-quality antenna.
As far as having 7 dB gain over any standard
reference antenna (dipole or isotropic) --
not a chance.

At best, you'll see around 2.1 dBi, 0dBd
gain, give or take a dB perhaps.

Sparky,
A 'loading' coil electrically lengthens an antenna.
A 'matching' coil does just that, matches the feedline
impedance to the antenna's input impedance. While they
can be combined into one coil, the two purposes are
still seperate. Actually, neither type coil introduces
much loss if they are 'done' correctly. That's the
problem, though, sometimes they aren't done correctly.

For a "ground plane" antenna -- that is, a vertical antenna with more-or-less horizontal radials that's mounted a wavelength or so above the ground or higher -- the point of diminishing returns with radials is two. There's no significant difference in performance or pattern between a ground plane with two radials and one with any larger number.

The number of radials does become important when the antenna is close to the ground, and very important when the radials are on or under the ground. But then it isn't usually called a "ground plane".

I really have to disagree with you there. If you have just two radials
on what is supposed to be a ground-plane vertical you are going to
have gobs of rf on the feedline. Been there done that.

>The number of radials does become important when the antenna is close to
>the ground, and very important when the radials are on or under the

The number of radials is important anytime an artifical groundplane is
used. A resonant counterpoise, i.e, the other half of a hertzian
dipole, is a different story....

The coax radiation (I assume that's what you meant) is prevented
because of the very low impedance at the axis of the radials, where
the radials connect with the coax shield. That's why a groundplane
vertical can be fed directly with unbalanced transmission lines. It's
an effect, not a cause.

Does a ground-mounted vertical 1/4-wave antenna have a gain of 3dB relative to a 1/2-wave dipole because the same power is concentrated into only a half-hemisphere ?

Assume a perfect ground.

The word, "antenna" is of Latin origin, and is the
yard-arm of a ship. Ships in Roman times were
not square-rigged, and the yard-arm stuck out,
rather like the yard of an Arab Dhow.

The word, "antenna" has been borrowed for things
which stick out, such as parts of an insect, and for
radio air transducers.

The Latin plural is "antennae".

Certain ignoramuses used "antennas" as the plural,
but it is incorrect. Some dictionaries now give "antennas"
as a valid plural, but this shows dictionaries to be
a record of contemporary usage, and not a record
of correctness.

No. What I was referring to is the synthesis of
the ground plane from which no radiation occurs.
In the transition from flat ground plane, via a cone, to
the single wire of a dipole, then an increasing degree
of radiation occurs.

A synthesized flat groundplane may be two elements
diametrically opposed, three elements at 120 degrees,
four at 90 degrees and so on. What is important is that
the local "near" fields effectively cancel out so that
no radiation occurs. (A similar effect to a capacity hat)

Radiation from a feeder is not "prevented" by a remote
termination. How would the energy in transit along the
feeder "know" that it mustn't radiate because of a distant
termination which it hasn't yet encountered?

Yes, a ground plane being an unbalanced antenna, can be fed
with unbalanced feeder.

I think we'd need to discuss other aspects, such as
the omnidirectionsl coverage of a vertical 1/4 wave,
against the circular lobes of a dipole.

If you have something to contribute from a
technical standpoint, and an opinion which suggests
that you know more about the subject than I do,
then why not contribute in a mature and positive manner?

> So Dave, do you really think that there are enough CBers running enough
> power to raise the noise level by 10-20dB?

Sure, especially if you factor in the effects of power addition (Which
in it's simplest form, basically says that if 2 signals on the exact
same frequency, are the exact same amplitude, they will combine and
increase by 3 db), which when you consider the thousands of signals out
there, it doesn't take much to understand what's really happening.
400 watts is enough of a jump in power to increase 20 db over stock 4
watts. You know as well as I do that 400 watts is considered a "driver"
by most amp jockeys. 400 watts is the bare minimum that anyone, with
aspirations of playing in the dog pound, would consider. Many run far
more.

> I did notice you forgot to
> address the point of 50KW+ transmitters and amplifiers.

Because I didn't understand what it was you were trying to say there.

> The average guy running 100-400 watts surely does not account for the increases
> that you have claimed.

Except that the "average" isn't 100 to 400 watts anymore. That was true
15 years ago. Today, practically anyone, who choses to run an amp STARTS
at 400 watts. At least that's been my experience in my local area. Yea,
they might try a 100 watt amp for a few weeks, then realize that it
isn't bringing on the big numbers that they've expected. They then make
the jump to something with a bit more punch. 500 - 700 watts is about
the limit that standard electrical systems can handle in a mobile. If
someone is really serious, they make the next jump to the 1K - 4K range,
which usually requires additional alternators, or battery banks. 1K -4K
is also >>typical for base stations, as ready made ham amplifiers will
fill that bill.

> I was there during all three of the cycles that you mentioned,
> and yes, there were times that the band became almost useless during the

> daytime. Not to be rude, but I think your memory might be the constant that
> is failing in this equation. <<g>>

Maybe yours is, if you are as old as I am? ;)

My memory is not as great as it used to be, but what is failing is short term memory. I have a tough time remembering what I ate for breakfast yesterday, but I can remember things that happened 30 years ago like it was yesterday. I remember such useless things as all my locker combinations from 7th grade on, the PLL truth charts from all of the my radios, both Cybernet and Uniden, from 1978. And I remember the names and handles of everyone I ever knew from back then. Believe me, I am not confused when I tell you that the skip noise is much worse now then it was then.

Yea, there were times in the late 70's when the noise actually reached S9, for small periods. Those were the times that we'd escape to "22a" (which became 24) just to knock the edge off. Today, S9 is the norm, and many days that noise goes over S9.
In 1978, if you were giving me a +20 signal, you were less than 2 miles away. Today, I see people in Texas giving me +20 over S9 signals.

The difference is there. I'm not crazy.

When I stated that overmodulation increases the power, I was refering to
the increases in splatter and harmonic content, that spew out up and
down the frequency. While it is not the type of power that makes a
signal stronger, it is still energy that adds into the total picture.
Not a pretty picture, but one nonetheless.

One thing is ture. The human ear can tolerate quite a bit of distortion,
and for the same reason that certain audio harmonics can make a signal
sound "warmer" (Which is why many audiophiles prefer tube amplifiers).
That is why many prefer the sound of overmodulation. Not that it really
helps their signal travel any farther.

Actually, the 2990 is not a "legal" CB. But Since I am a tech, I like to
share information to help people fix their problems.

Like I've said before, if you're going to run illegally, do it with
properly set up equipment. Not every illegal operator needs to sound
like dirt.

Those guys, with whom you are refering, are not really "techs" in the
trueist sense of the word. It doesn't take much knowlege to cut certain
parts out, or make a blanket adjustment.

What separates the men from the boys in this arena, are the guys who can
actually find a difficult problem like this, without shotgunning parts,
and in a fairly short amount of time.

Is there one?

The loading coil lengthens the antenna for the purpose of matching
the input impedance to the feedline impedance. What other reason
is there for using a loading coil?

> A 'loading' coil electrically lengthens an antenna.

Not true. If it was, you could add a loading coil to a 1/4 wave
vertical and get the radiation pattern of a 1/2 or 5/8 wave vertical.

What the loading coil does is to cancel the capacitive reactance of a
short antenna thereby making it resonant. The radiation pattern and
"electrical length" remain that of a short antenna.

Remove top screw from each side of panel assembly. Rotate front panel
forward CAREFULLY to gain access to control board (X53-3690-10). This
board is mounted vertically against the body of the transceiver. It is
NOT the board mounted in front panel.
Locate and remove chip resistor R41.
Assemble transceiver. CPU reset by pressing and holding A=B button as
power is turned on.<<

Yes, I just got around to it (what can I say?) but thanks just the same.

Ok! Let me try to be more clear. I want to adjust the power to the full 12watts PEP (swing) and tweak the modulation as close to 100% as possible. Since a powermike can cause distortion and splatter (non-linear operation) I am also installing a super-cheap speech compression circuit that works real well. My experiment is to produce a super-loud, blasting radio that remains 100% within legal limits.

Doc is correct, adding a loading coil does change the electrical
length. The radiation pattern will remain the same, that being
determined by its physical length

Ok, but nobody was making the distinction as to whether the ground
plane was radiating or not. In fact, the original poster referred to a
sloping ground plane, which is going to radiate to some extent.

>Radiation from a feeder is not "prevented" by a remote
>termination. How would the energy in transit along the

Probably the same way it happens when the shield at the far end of a
coax is grounded to earth instead of an elevated, artificial ground.

Well, the compressor is a start in the right direction. Take a look at
some of those audio processors that are available. Pretty remarkable
stuff. Some even have equalizers, noise gates, and synchronous
blankers. Power mics do not cause distortion and splatter because of
non-linear operation (have you been listening to Eitner?), but because
they overload the limiter to the point of clipping your audio. Most CB
radios have a mic preamp built into the radio and the audio gain is
preset for the audio level of the stock mic. So about the only purpose
of a power mic is because you can't find a decent replacement mic with
the same audio level as the stock mic. But then again, some people
just like to waste batteries.

Speech can occasionlly exceed 100% modulation even when the modulation
is adjusted low, which is why CB radios have limiters. But if you push
your modulation too hard you will exceed the capabilities of the
limiter and end up creating those dreaded harmonics anyway. That's why
most CB radios are already adjusted at the factory to provide optimum
modulation with a minimum amount of clipping. You might be suprised to
know that most of these radios are already set for about 90 to 98%
modulation -- pushing it any harder will just cause problems and no
noticable improvement.

And you won't get any measurable advantage by tweaking your radio for
that last milliwatt of power, legal or not. Your best bet would be to
max out your antenna. I'm sure that Jay could turn you on to a decent
beam that will provide much more gain than you could get even if you
tweaked your radio to it's absolute limits (which, by the way, isn't
going to be much better than legal power anyway, since you need to
quadruple your power just to double your range, and that's only under
ideal conditions -- definately not 27MHz).

But if you really want to play with the little screws inside your
radio, just start turning them and see what they do. You could
probably do a better job than some of these "techs" could do with a
service manual and a handful of cash. And who knows, you might even
learn something about radio.

Indeed. Like many other Latin words, however, "antenna" has been
used in English for long enough to be considered fully naturalised, and
subject therefore to the rules of English inflection, such as they are. Do
you insist on saying "fora", when "forums" is by far the more common
usage? And what is the English plural of "agenda", which is already
plural in Latin?

>Certain ignoramuses used "antennas" as the plural,
>but it is incorrect.

Only when speaking Latin. It has presumably escaped your notice that
"ignoramus" is a verb in Latin, not a noun. By your argument, it must
therefore be considered incorrect to use it as a noun in English.

>Some dictionaries now give "antennas"
>as a valid plural, but this shows dictionaries to be

Which is exactly how it should be. What is correctness if not
educated contemporary usage? Who is the arbiter of correct
usage in the 21st century, anyway? Fowler? Onions? Dryden?
Radio Ham?

It would appear "Radio Ham" has got his "anus" well and truly in the
glue-pot, yet again.

Now trying to change the subject, he has clearly demonstrated he knows
sweet f*ck all about "antennas"

Once again he has proved himself a total embarrassment to his country,
by making himself a complete idiot in front of our American friends.

Until "Radio Ham" stared posting here, Her Majestys Government and the
citizens of the UK had a special relationship with the USA...not
anymore I fear :-(

Cue GED...to make matters worse!

Why only go back to the Latin? Don't have any truck with Americanisms. Call it aerial, which comes from the Greek "aerios", as Sir Oliver Lodge, F J Camm etc did.

Lionel Carter

Radio Ham has never defined exactly what period of spoken English he sees as being the correct one, presumably the one used in his Liberal Republic.

Hence he can always correct your English, but you can't correct his, because you don't know what it is!

And I bet we'll never find out, either.

I think you'll find that even 4 radials are nowhere near enough to prevent coupling from the vertical radiator to the feedline, and I doubt that 4 is significantly better than 2 in this regard. The best way I've found to decouple the feedline in a ground plane antenna is to use two current baluns, one at the feedpoint and one about a quarter wavelength below it. The AEA Isopole did a good job by using conical decoupling sleeves. But radials don't do much of a job of decoupling.

Hi,
I need an audio chip for a TRC-451 AM/SSB radio. RS model #21-1565. RS doesn't stock parts for this old of a radio. Chip is labeled UPCI I 82H (NEC). Please look around in your parts box, I don't want to scrap a good old radio.
Thanks
Tim

Like I said, check a reference on antenna theory.

Ground planes radiate. At they carry rf currents and are not
closely spaced conductors with equal but opposite current flows,
how can it be otherwise?

Reg,

A 1/4 wave vertical should have the same gain as a half-wave dipole.
(The "missing half" is virtual...) In reality, you'd have to have a
pretty good ground or a whole bunch of radials for that ground-mounted
1/4 wave vert to have the same performance as a good dipole hung relatively
high and clear.

Very 73,

Tom AB9B

A great deal of modern English (particularly American English) is a
composite of other languages. Dictionaries always have been a record of
contemporary usage. In addition to modern usage, dictionaries also often
show from where the word was derived. This is the way a language evolves.
When a derivation of a word comes into common enough usage to be recognized
by the majority, it is then considered a legitimate word. Being as language
has been evolving since the beginning of man, possibly before depending on
your definition of language, at what point in time do you suggest as a
standard for correctness?

Maybe this is just semantics, or maybe not.

To me, "electrical length" refers to the actual physical length of the antenna. I think you're using "electrical length" to mean a certain combination of R+/-jX. To me, that's just the impedance at the feed point and is not necessarily related to length.

By using various inductors and capacitors at different points in the antenna or at the base, you can have all kinds of different impedances at the feed point, but the "electrical length" of the antenna remains the same.

If this is just semantics I can live with that, as long as we agree that the far-field radiation pattern is determined by the physical length and not by any loading coils, capacitors or whatever. All they affect is impedance (and of course, efficiency).

Bill, W7TI

In article <cXDC8.11869$WR1.3575@sccrnsc01>, "JEEPMON" says...
This quarter wave design is claimed to produce 7dB gain?! How
>can this be. Can ANY quarter wave antenna have gain.

See whether they are claiming gain in dBi or dBd

dBi is the nonexistent isotropic antenna, mathematically a point source.
Damn near any antenna shows gain over this mythical antenna.

dBd is gain over a dipole. An unlikely antenna can also show dBd gain also,
depending on where you measure it. Even omnidirectional antennas like J-poles
show gain over a dipole at certain angles because they don't shoot much signal
into the air.

For a long time QST magazine didn't allow antenna advertisers to publish "gain"
figures. You pretty well have to look at the altitude and azimuth patterns for
each antenna to see where the claimed gain is coming from. The gain may be
real, but it may exist only at some pretty unlikely or unuseful angles.

3812. Re: 1/4 wave antenna gian??????

Gain figures, especially for vertical antennas, can be a crapshoot. Besides some companies 'fudging' their figures, vertical antennas are very sensitive as to mounting height. The best ground, in which case you can mount the antenna at ground level without loosing signal, is salt water. Assuming you, like most of us, do not live on an ocean beach all year long, you might well consider what kind of height you need. Next best ground is ... ready for this ... the desert! Yep, terrible ground (sand) is not too bad as long as you have some kind of counterpoise (groundplane). In this case, you will only loose a couple of dB mounting at ground level. Up a wavelength or so, you will realize close to free space gain (well, make that no loss). The worst kind of ground is what is described as 'average' ground. This is often clay, found all over the Eastern seaboard of the United States. If you mount a vertical at ground level, you will realize a LOSS of nearly 6 dB compared to a vertical mounted 2 wavelengths or higher. I wish I had the URL to the site that ran all of this info, but the long and the short of it is this - horizontally polarized antennas do not have this kind of loss. Yes, if you mount a dipole close to the ground, most of its' radiation will be up and not much towards the horizon. But at least it will still radiate! At heights of 1 1/2 wavelengths or less, the dipole will usually outperform a vertical (despite the low angle of takeoff on a vertical) because of the ground loss. Just for grins and chuckles (and to see how inefficient an antenna might be), go to http://www.arrl.org and read the story about the new ham band being proposed. This will be at 160 to 190 KHz. Currently, unlicensed experimenters can use this band. They are limited (I believe) to 1 watt output and the total length of the antenna, ground, and feedline all added together cannot exceed approximately 50 feet. To understand how inefficient these antennas may be, read the whole artical. Note that it is proposed that amateurs be allowed to use 200 watts pep. Also note that regardless of the power, the EIRP (effective isotropic radiated power) cannot exceed 2 watts! That would imply an antenna gain on the order of MINUS 20 dB! Granted, this is due to the very small size of the antenna vs the wavelength of the signal, but it may give you an idea of how widely antenna 'gains' can vary. That old quarter wave whip from rat shack mounted at 2 wavelengths will likely outperform the new whizz-bang 5/8 wave antenna you just bought but mounted only 1 wavelength up. To sum up: antennas are very important; but so is mounting height, polarization, and feedline.

3815. GPK for the IMAX 2000

I'm preparing to put up an IMAX 2000 and I see that Copper Electronics (Among others) has a ground plane kit for the IMAX 2000. Has anybody used one of these? If so, what was your opinion of it? I'm also going to use a line isolator at the feedpoint of the antenna to minimize feedline radiation. Thanks in advance.

Mark

Not very smart listing it in CB catagory.
I can pretty much guarantee you it will be cancelled. Try Electronics/other catagory after they cancel it.....better luck

Hi Cyndi,

My money (or lack thereof) is on the IMAX 2000. I believe Jay and his Interceptor I-10K takes the top honor for a vertical omni. Personally, I think a simple two element Yagi-Uda beats them all. You can build one cheap and get load of performance that beats even the best omni. (Albeit with soem nulls off the sides.) That's my two cents.

I found that it helped to run the feed line straight down for as far as possible before going horizontal. Took care of my RFI problems.

Any antenna that doesn't have significant loss has gain over an isotropic antenna in some direction(s). The isotropic antenna has the lowest possible gain of any perfectly efficient antenna.

The problem with comparing antenna gain to a dipole is that you've got to make clear what dipole you're talking about. A dipole over ground has several dB gain over a dipole in free space (which, at 2.15 dBi gain, is generally regarded as having a gain of 0 "dBd"). So you have the interesting prospect of dipoles with several dBd gain. This is an even bigger boon to antenna manufacturers than dBi, and some of them routinely take advantage of it. And, as Reg rhetorically asked about, a vertical dipole or monopole over a perfect ground has a gain that's 3 dB greater than a free space dipole or, using the most common definition of "dBd", a gain of 3 dBd. The advantage to using dBi is that there's a single, universal definition. When gain is given in dBi, you can at least be sure of what's meant. When it's given in dBd, you never know for sure.

Let's not forget that the majority of these DX groups are based in foeign countries, many of which who are quite 11 meter friendly. Since you brought it up earlier, Leland, Brazil is a very 11 meter friendly nation.

Also, let's not forget that the FCC went AWOL re. CB enforcement. If your local PD pulled the same stunt, you'd be up in arms. The reasonable approach is to bring back rigorous enforcement to the band, but also correct other past mistake. Yes, the FCC makes mistakes too. Lift that silly restriction.

NZ rules are available on the net although I did not bookmark them.
Several cute things in their rules. 400 PEP max.

It remained a ham band in Japan long enough for the Famous Yayhoo Brown
Wire Trick.

At least in this country, we can't talk to pirates so I kind of wonder
what good it does to be able to fire up in the environs of 27.12 if the
Kiwis have the same rule.

Ok, since everyone else has had a stab at this I'd like a turn.

It's my contention that the ground plane radials do in fact radiate.
To say otherwise is to also say only one half of a dipole radiates a signal.

The length of the radials is chosen to be a few percent longer than the frequency for which the main radiator is tuned. When you do this for a yagi, this element(s) becomes a reflector. It re-radiates an impinging signal. Even the driven element or in this case, the main radiator of a 1/4 wave, will re-radiate a portion of the rcvd signal.

The grnd plane radials on a 1/4wave antenna perform two functions. One is to complete the antenna when mounted above grnd. They provide the other half of the vertically mounted dipole. A second function is decoupling. The radials, when tuned, provide a lower impedance to the circulating rf current than the feedline extending from the antenna.

Although the radials afford some decoupling, the feedline may still have some rf flowing on the outside of the braid. How much is a subjective question because it has to do with layout, radial efficiency, total amount of radiated power etc etc. It's is not a bad idea to incorporate a choke in the line near the antenna.

There were some questions about loading coils and matching circuits.

Loading coils change the electrical length so that the current distribution will approach that of a physically longer antenna. Loading coils can be at the base or in the middle(typically) of an antenna. When such a coil is used at the base, it may be tapped in such a way as to afford an impedance match between the shortened antenna and the cable. If used near the center of the antenna, the length of the antenna above the coil is generally made adjustable to afford tuning.

First off the radials need to be sloped for matching the feedline. The
angle is around 45 degrees, but I found that can vary quite a bit.
Once the antenna is fairly well matched, then the ground radials need
to be cut for the band. I like to use several radials with slightly
different lengths (about 5% variation), because it tends to give a bit
wider response while still providing a good match. I have done this
for several commercial radio installs on HF and VHF, and it does keep
RF off the coax. I have never been able to get RF off the feedline
using less than four radials, but I use eight of them for most of my
intsalls.

Avoid the issues by attacking the person. Very typical of a keyclown.

Well, you said that you see the group lately as nothing more than a
"never-ending pissing contest". So if you don't even read the group,
how do you know that I'm not helpful? Or is it that I'm not helpful to
keyclowns? Either way, you aren't ignoring me now, Bill. So do you
want to address the -real- issues now? Do you think that you can
explain some of your technical bullshit that you have shoveled around
in this group over the years? Or would you rather maintain your pompus
stance of psuedo-avoidance while I just dig your posts out of the

archives and slowly chisel away your credibility to nothing (not that there's much left anyway...)?

I may be arrogant, and people here may not like me a whole lot, but they do read my technical posts because I know what I'm talking about and I don't practice radio voodoo. And I don't hide in the email when I'm wrong.

>That is why many prefer the sound of overmodulation.

I think someone coined a term for that: "psyhco-acoustics". It's not
the distortion, but actually the -lack- of distortion that makes tubes
sound better. A tube is able to handle the very brief peaks that occur
in any complex audio signal, while a transistor just distorts it by
clipping or saturating. The tube amp has a much better dynamic range
than a transistor amp. Somewhere I have a link to a page that explains
that very well, let me know if you want it. It's very interesting.

> Not that it really
>helps their signal travel any farther.

Yeah, that's a pretty ridiculous idea!

Yes, and the rules of English are to use the Latin forms of plurals.
In the Oxford English Dictionary of c1960, "antennae" is given as the
plural both for the insect form, and for the radio form.

> Do
> you insist on saying "fora", when "forums" is by far the more common
> usage?

Do I insist on high standards in education? Yes.

> And what is the English plural of "agenda", which is already
> plural in Latin?

It's not a Latin word. It's not listed in any of my Latin dictionaries,
and I have a number, both large and small, going back to c1850.

> >Certain ignoramuses used "antennas" as the plural,
> >but it is incorrect.
> Only when speaking Latin. It has presumably escaped your notice that
> "ignoramus" is a verb in Latin, not a noun. By your argument, it must
> therefore be considered incorrect to use it as a noun in English.

No. That's not my argument. Straw Man! "Ignoramus" came in
from an old legal term where it's use was as the verb, 1st person plural,
present tense, indicative active.

> >Some dictionaries now give "antennas"
> >as a valid plural, but this shows dictionaries to be

You are not using the accepted definition. Electrical length is what the length appears to be to the RF. Physical length is the actual measured length that you can get with a tape measure.

For example, the electrical length is coax is longer than the physical length. If you cut a piece of coax to an electrical 1/4 wavelength, it will be shorter than 1/4 physical wavelength.

Another way to look at this is to split the problem into two parts- power transfer tx to antenna and power transfer from the antenna to the propagation 'medium' (air or freespace normally).

Thus, the various matching components just ensure the tx 'sees' the optimal impedance so maximal power is transferred into the antenna- at the frequency in use. (Note: optimal and maximal , not ums- unless the match is perfect). Of course, any losses in the matching or loading components is RF not transferred to the antenna.

(If you could not see the antenna to measure it with a ruler then measurements at the feed point only would not allow you to distinguish between a correctly adjusted antenna and a dummy load- unless you varied the frequency- let alone determine if the antenna is 1m or 1000m long.)

Having got the RF into the antenna the next question is how well does it radiate? Then, as a quick guide, phyiscal size does come into play if you compare antennas of similar type.

In antennas with 'traps', the traps isolate parts of the antenna so they 'disappear' at the relevant frequency which simplifies the matching problem and thus limit losses in the matching network (the more L and C you need to

match the less RF gets to the antenna).

Also, a 1/4 wave is generally offered as an isotropic radiator and its gain is -2.14dB compared with a dipole. The figure of 3dB difference between a 1/4w and a dipole is a bit of 'license' to make antennas look better- hence dBi and dBd are often quoted to 'clarify' things.

This is not 1960 anymore. Nor does everyone use the OED - after all,
it misspells aluminum as well.

From my Webster's Third New International Dictionary (1966 ed):

3 pl usu antennas: a usu. metallic device (as a rod, wire, or arrangement
of wires) for radiating or receiving radio waves.

It also states that "antennas" is acceptable when referring to animal
antennae or the organs of certain invertebrates.

>
I see you are fishing again Reg!

A ground mounted 1/4 wave (assuming perfect ground) will
have gain over a horizontal dipole in free space (a theoretical
antenna), but not over a horizontal dipole mounted over perfect
ground, as the ground reflections cause the horizontal dipole
to concentrate it's power into a hemisphere as well. A vertical
dipole with the lower end just above perfect ground will have
(more or less) the same radiation pattern as a quarter wave
over perfect ground, a vertical dipole with it's lower end 1/4
wave above ground will have some gain over a 1/4 wave
vertical at the low angles of radiation (around 5-7 degrees).
Of course perfect ground does not exist, so the end result
may be somewhat different to the theory!

_____

I was speaking of antennas, not coax. As far as I know, antennas do not
have a velocity factor. There may be some arcane exception, but for the
HF/VHF antennas under discussion, I believe that statement holds.
Physical length is measured in feet or inches or whatever; electrical
length is measured in wavelengths or degrees. For a given frequency, if
you know one you can determine the other.

Hair splitters and nit pickers are welcome to fire away.

Language is a method of communication. Communication is the expression
and understanding of concepts and ideas. If the word "antennas" is
sufficient for everyone reading it to understand the meaning that was
intended by the person using it, and it certianly look like that's the
case, then it really doesn't matter if it's Latin, English, American,
Ebonics, Jive or Cajun. The only person with a problem with it is you,
but even you seem to have understood it's meaning just fine. So if all
you want to do is whine about grammar then take your cork over to the
appropriate newsgroup and do it there.

Sparky, looks like you have met the frustrated Latin scholars from the UK.
Good Luck.

My go-round was about the ending of sentences with prepositions but
plurals are fun as well.
As I believe Shaw said, "This is the sort of nonsense up with which I will
not put"

This week the FCC took the first steps to create a new band at 5.25-5.40 MHz US only and to legalize the 136 kHz band already used in Europe. If previous policy is continued it will be available to General Class licensees. Dig out your code discs and Part 97-- the spots they are a fallin'.

I want to see a mobile antenna for 136 kHz.

Hi all one quick post today, do a google search for
phrase below, for Rec.Radio.Cb only and Viola!
It seems it's used primarily by Aaron/George, pretty
funny huh!!! LOL

"Just because you say it doesn't make
it so."

George/Aaron is just too funny, LMAO!!!!

Again, you are wrong. The diameter of the conductor affects the length
of the resonant element. There is also an end effect. Both make the
electrical length longer than the physical length.

The formulas in the RAH even consider this. For example, look at the
formula for a 1/2 wave wire dipole. It is not a physical half wave
in length.

>Bill, W7TI

Hi Bill,

It is not nit picking to point out that electrical length and physical
length are different for a very good reason.

Further, this is not something confined to transmission lines, it is
common to all stimulated conductors and varies only in relation to the
construction of that same conductor (used for any purpose or simply
caught in the crossfire). Velocity factor is a derivation of the
older science of Optics and relates to the characteristic called
refractive index (and explicitly shown in Maxwell's equations which
occupy the studies of Optics equally with RF).

This is experienced every day by observing a glass of water and the
change of the speed of light translated into a delay that is perceived
as a distortion of a faithful scene migrating through it and by it at
the same time. The effect varies only by the degree of the index of
refraction (or velocity factor) which by definition exists everywhere

as being different from that of a vacuum (air being nearly equal to it, but even then the slight difference creates common examples of perceived distortion).

Without such differences observed, no beam forming antennas (lenses) would operate nor would we observe ionospheric phenomenon of skip (reflection and diffraction - again heavily vested with Optics).

Hi CW,

You have exposed the commonplace mis-reading of language by those who
lean on the OED.

The Oxford English Dictionary explicitly employs a form of definition
BY APPLICATION across time, in time order. As such, it implicitly
allows that English is not a fixed and immutable protocol and
acknowledges that meanings change by the nature of usage. Further, it
provides examples by time as used at that time - not through the
standard American style of prescription or proscription.

Ironic that our correspondent leans upon the American method of
definition to advance the notion English is not American (a long lost
battle since early last century). My condolences to the aggrieved.

And that is 0db. A 1/4 wave ground plane is a 1/2 wave dipole
with the lower half replaced with a ground plane.

Didn't you read the cutaway article on the antennas? The Imax has
the Antron beat. A few extra bucks gets a much better antenna. A
few more bucks gets an aluminum 5/8 Maco V58 (1st choice).

It can't be any better or worse then any other base loaded
large coil antennas. I'd like to see the paint under the
magnet after running 1000 watts. (What paint?)

yeh and don't forget the term...'snapperhead'.....it is really
quite obvious.....little dickie mccollum made the observation some
time back that boobnutts was george......so now the plot
thickens.....

would a anonymous friend of keyclowns go by devon circle in allentown
and see who lives there....??? also publish the picture for all of us
to see , on the net.....no doubt about it.....sdj is
down.....

well let's see shark.........

for the phrase 'just because you say it doesn't make it
so'.........well it was used in the last several months exclusively by
the following screen nics:

aaron voobner
pipedreams
3-500zees
worldwide prozac
the 3 holer
whiskey
voobusch

the term 'snapperhead' was used by the following screen nics:

landsharksux
sol t nuts
hamaholic
shrimp biskit
and another
3-500zees

so anyone can see a definite corolation here. considering all of them were posted from our friend at comcast or home.com..and of course he went to comcast after home went defunct.....so george busch.....smell the coffee.....what ya going to do ??????? sdj is down.....

Some Twisty Quotes

""That's the sticking point, right? Just because you read it on the internet
it must be true, eh 'Nad?"

"Unfortunately for you, just because you say otherwise and don't agree,
doesn't make it so."

"Some of what you said has merit, the majority is BS as usual."

Because you say so? :)

"Just 'cause you say it, don't make it so."

""Because you say so?

"??Haha Yeah Ok Just because you say it doesnt make it so.

"No. It is, "It isn't true just because you said so," but thanks for trying
to hack it into something it's not."

"Next time think before you shoot your mouth off just because you have
personal
problems."

"Not true,.Just because YOU don;t know whose frequency they may be on
and you don;t have a clue does not mean the rest of the group sares your
ignorance.

"Just because you have not "personally" monitored anything does not
automatically mean they are not, or have not been used.

"It does have everything to do with you, because I say so. I run your show,
not you junior

"Just 'cause you say it, doesn't make it so. In any event, you are still
incorrect for the most part."

"Or perhaps a post where I declare that something is true JUST BECAUSE I SAY IT IS?

3951. OT: Snapperhead?

Newsgroup: rec.radio.cb
Date: 2002-05-11 22:28:51 UTC
From: geoaaron <private@whocares.com>
Message-ID: <DWgD8.158300$N8.13330939@bin5.nnrp.aus1.giganews.com>

Search of SnapperHead reveals 4,320

http://groups.google.com/groups?hl=en&q=snapperhead+

What is a snapperhead?

Contrary to popular belief, a snapperhead is not a person who wears
a fish in their hair. It's a term I first heard while living on the
East Coast. It's normally bestowed upon a person who has earned
the disdain of the bestower. While not particularly cruel or vulgar,
I certainly would not let someone call my little brother a snapperhead.

Compare it to calling someone "stupid", "dork", "moron", or "weisel".

3952. Re: 1/4 wave antenna gian??????

Would the people participating in this thread at least consider
confining the long-winded OT flame fests about Latin and dictionaries to
one newsgroup?

A thread about 1/4 wave length antennas over 100 responses is a bit much
though the norm for rec.radio.amateur.antenna but you all really look
like a bunch of goof balls when drifting OT for all the groups listed.

Thanks in advance.

His misspellings are intentional. It's all part of the ruse.

3958. The whole story, up to now….

Newsgroup: rec.radio.cb
Date: 2002-05-12 00:42:52 UTC
From: geoaaronia@aol.com
Message-ID: <20020511204252.11762.00016745@mb-mq.aol.com>
Source record: 123823

The whole story, up to now….

(Knock at the door) Aaron opens door wearing his skimpiest thong underwear

Aaron: Hi Sparky! How are you!

Sparky: I'm good Aaron. Is dinner ready?

Aaron: Almost. In the meantime, you can snack on me, but we need to hurry before George gets here.

Sparky:(screaming) Aaron! Will you shut up with the advances! I already told you I've started to like women now! Now leave me alone!

Aaron: OK, OK! I just thought we could be like the old days again.

Sparky: No, I'm really going to stick it out this time.

Aaron: (sniffling) Ok Sparky, have it your way. I'll respect your wishes.

Sparky: Where's George? Do we have to wait for him to eat?

Aaron: Yes, he's bringing the salad.

Sparky: OK. Got any snacks?

Aaron: I think so, let me check.

(knock at the door)Aaron answers the door.

Aaron:(exclaiming) George! My God! What happened to you?

George:(crying) I was just out minding my own business, following this little girl, and all the sudden, wham! Her Dad must have seen me and punched me. I had just asked if she wanted some candy too. I think I could have had her. Then the Dad pulled out of the window of my Pacer, and beat me some more. I think he dislocated my shoulder too.

Sparky: Can we eat now?

Aaron: Sparky, can't you see George is hurt? Go get one of the steaks for George's black eyes. And while you're in the kitchen Sparky, get some ice for his broken nose and busted lip too.

Sparky: OK, but I ain't eating the steak that you use on George's eyes!

Aaron: OK, whatever!

(Sparky spends fully 5 minutes trying to figure out which steak is the smallest, so he can have the biggest…then finally he returns)

Aaron: God Sparky! Why did you take a bite out of it? It's raw, for Christ's sake!

Sparky:(unintelligible mumbling caused by mouthful of raw steak)

Aaron:(grabs steak from Sparky and applies it to George's eyes) There now George. Is that better? Aaron knows how to make you feel better, doesn't he?

George: Yes Aaron, it's much better now. Thanks, you know I bruise easily.

Aaron: Hey Sparky, light the grill.

Sparky: Hey, those steaks ain't half bad raw! Do we really need to cook them?

Aaron: My God Sparky! Sometimes you act like a Neanderthal! Light the damn grill!

(Sparky goes out back, turns on the gas, clicks the igniter repeatedly, nothing happens. Goes back inside for matches and returns)

Aaron:(just as Sparky lights the match) NO! STOP!

(loud explosion)

Sparky: (screaming) I'm on fire! Somebody help me!

(Sparky runs back through the house with his beard on fire, screaming for help. Aaron and George race behind him with teacups filled with water)

To Be Continued

Finally, Aaron and George manage to catch Sparky and beat out the fire in Sparky's beard with the teacups.

Sparky: Thanks guys! That was close! I saw my life flash before my eyes.

Aaron: No prob Sparky. You know we love you.

George: Speak for yourself, Aaron! Faggot!

Sparky: Can we eat now?

George: Well, we could if you hadn't blown up the grill!

Aaron: It's OK Sparky. We'll just grill the steaks on the stove.

Sparky: I don't wanna wait! I'm getting dizzy. My cholesterol must have dropped below 300.

George: Here, drink this.

Sparky: What is it?

George: Bacon drippings. It will bring the cholesterol level back up in your blood.

Sparky:(drinks greedily) Burp! Thanks George.

George: No problem. Hey Aaron, you still have that "Little Girls Gone Wild" video?

Aaron: I think so…check over there in the gay porn by the VCR.

George: Faggot! (looks for the tape)

Sparky: I'm hungry! Let's eat.

Aaron: Just hang on a minute. Let me get these damn steaks cooked. (throws the steaks in the pan)

George: (tearing his eyes off the video) Sparky, get the salad and dressing ready, will ya? I'm busy now.

Sparky: OK, George. (Sparky sets the table)

Aaron: How do you guys like your steaks?

Sparky: Raw is fine with me.

George: (rubbing his crotch while watching the little girl video) I don't care. Yeah, raw is fine with me too.

Aaron: (mumbles) Damn weirdo's…

Aaron: (grease splatters on Aaron's hairless chest) Ouch!

George: Aaron, do you mind if I take this video home with me?

Aaron: Sure, take it. You know I don't like females.

George: (under his breath) Faggot!

Sparky: Can we eat now?

Aaron: Yep! Steaks are done. (Aaron places them on the table)

Sparky: I'm first George! That's my steak!

George: Whatever Sparky! Hell, I'm just gonna leave now. (grabs the video and heads for the door)

Aaron: Where you going, George?

George: Um…uh…I'm not really hungry now. I think I'll just watch this tape at home.

Sparky: Good! Gimme his steak.

Aaron: OK George, see ya later.

George: Bye

To be continued….

Scene: Much later in the evening after George has gone home to watch his kiddy porn, we return to find Aaron and Sparky enmeshed in each other's arms.

Aaron: Sparky, I knew you would come around.

Sparky: Well Aaron, I kind of feel guilty…almost as if I'm slipping back into my old self. I've really tried to kick this man habit, but I can't seem to stop having feelings for you.

Aaron: Well Sparky, I always knew we were meant for each other.

Sparky: I only ask one thing of you, Aaron.

Aaron: What might that be, Sparky?

Sparky: All I ask is that you don't breath a word of this encounter to George.

Aaron: Fair enough. I know he's a bit of a bigot.

Sparky: Yes he is, but he's still my only real friend. You know, I can't count the times that he's tried to save me when I've gotten in over my head on the newsgroup.

Aaron: I know Sparky, and he's done the same for me. I really love him, but I can't let him know that.

Sparky: So, we're sworn to secrecy, right Aaron?

Aaron: Absolutely! Remember, we did take the AKC pledge.

Sparky:(chuckles quietly)

Sparky: (tentatively) OK Aaron, I'm all yours.

Scene: Fade to black…

To be continued…

_____

Did I ever say the electrical length and the physical length were the
same? I said you could convert one to the other, but that doesn't make
them identical quantities. One is measured in linear dimensions and the
other in wavelengths or degrees. Obviously there has to be a conversion
factor to go from one to the other, and, properly done, that takes in
account end effect and diameter.

Contentious little fella, aren't ya? :-)

>would operate

Dang! We almost agreed, right up to that statement above. What kind of antennas are you talking about that act like lenses? Lenses operate by refraction, but the antennas I'm familiar with act by vector summing of all the points of radiation and re-radiation. No refraction involved.

Perhaps you meant "mirrors" instead of "lenses"? That might partially qualify a yagi, but collinear type arrays don't fit either category, and they are certainly "beam forming antennas".

Please explain.

Bill, W7TI

>Any antenna that doesn't have significant loss has gain over an
>isotropic antenna in some direction(s). The isotropic antenna has the
>lowest possible gain of any perfectly efficient antenna.
>
>The problem with comparing antenna gain to a dipole is that you've got
>to make clear what dipole you're talking about.

Yeah, exactly. See what I wrote. Gain is gain "compared to what?"

You need to know how the comparison is being made.

But then I said that already.

Oh and Mopar, if you ever get out this way, there is a guy here in my
town that has a cubic butt ton (a whole sh|tload) of original mopar
parts, as well as many old cars in original condition including a 72
charger r/t special that has never been titled.

Hi Bill,

The passive elements of the beam can also be described as artificial
dielectrics (without disturbing their electrical effect one iota).
That this may seem odd is only evidence of the lack of exposure to
commonplace designs in the EHF where they abound.

Being dielectric, they exhibit the qualities of a slightly different
dielectric constant to the air buffer between the elements and thus
they impose a refractive bend to the emerging spherical wave front
from the radiator source. It is the dielectric constant that creates
the velocity factor (or actually conforms to it in the context of
Optics). This analogy is supported by both a mechanistic description
of lens and the more common expression of delay which are identical.

As you seem comfortable with a mirror (and indeed it is explicit
within the standard usage of reflector) you need only consider the
additional complexity of a curved mirror which is the analog of a
reflecting lens.

Contrary to popular belief, a snapperhead is not a person who wears
a fish in their hair. It's a term I first heard while living on the
East Coast. It's normally bestowed upon a person who has earned
the disdain of the bestower. While not particularly cruel or vulgar,
I certainly would not let someone call my little brother a snapperhead.

Compare it to calling someone "stupid", "dork", "moron", or "weisel".

I don't think so. Dielectrics are a completely different thing from
conductors and behave in completely different ways. I think this
conversation is over.

Bush the elder would have had a phrase for this: Voodoo physics.

No, I have not. I must go on the word of the Brazilian operators with whom I've had contacts. One can also do a web search for Brazilian DX groups. Take care and 73.

>few more bucks gets an aluminum 5/8 Maco V58 (1st choice).

Actually, I did. The IMAX 2000 is a .64 wave which nets a slightly higher gain than a 5/8ths or .625 wave. The article also mentioned that the addition of a ground plane would result in even better performance. I'll let you guys know. Take care and 73.

Mark

BTW, If I remember correctly, a .64 wave antenna is half a Extended Double Zepp vertically oriented. Good stuff.

>73, Bill W7TI

Hi Bill,

Everything I've offered is realized in both theory and practice.

A faint reference may be found in Johnson and Jasik to the point:
"Data on long Yagi-Udas indicate that, for lambda/lamdaz near 1,
loss in artificial dielectrics is likewise negligible, provided
all joints are firmly press-fit [into a surface wave antenna -
rwc] or soldered and the metal is of high conductivity."

Bailey in "TV and other Receiving Antennas" on ppg. 552 - 553 presents
both a dielectric and an artificial dielectric antenna.

Ramo in "Fields and Waves in Communication Electronics," Sec. 12.17
"Lenses for Directing Radiation" offers the explanation and the HF
example for the Luneberg Lens with the explicit usage of Artificial
Dielectric Lens.

OK, let's consider. You have proceeded to
discuss the matter of Latin discussion yourself.

One law for you and another for the rest?

This is not unlike the hypocritical and mass infantility
shown by the USA about Sept 11th. On Sept 9th, the
USA launched an unprovoked attack on Iraq, and used
flying projectiles to bring down a building and crush to
death and burn to death the occupants of that building.
In the light of that, the whole reaction of the USA to
the same thing being done to them two days later was
hypocritical and infantile.

What's sauce for the goose is sauce for the gander.

Ummm I wouldn't be so quick to dismiss the concept.

This concept is more usefully applied to the EHF regions
which he mentioned.

You may remember that some time ago, there were these funny
looking lens things that showed up on electronics stores
shelves. They promised better range for your radar detectors
if placed over the antenna ports. These were actually optic
devices which by virtue of dielectrics and optics would
accept microwave energy and collimate (spelling?) it. The
same principle applied to eyeglass lens's for people in near
proximity to radar guns. If the lens was of the right
material and thickness, it could collimate the radar signal
and focus it into the eye.

Some people will refer to a 1/4 ground-plane vertical as a 1/2 wave
vertical dipole if the ground radials are more vertical than
horizontal, as is the case with the Skylab. It's just semantics.

Yes. So if the antenna is physically shorter, why do you need the loading
coil? To match it to the feedline impedance.

No No no Aaron, I mean George, I mean Aaron <G>
You must run a defined search, nice try to avert attention
away from yourself again "snapper head" and remember
"just because you say it, doesn't make it so" but in this
case it does!!!!!

I'll respond later when I'm finished with a morning Ride, a day at
the Zoo for Mothers Day with the family, all the while you'll be out here
typing away defending the impossible dream.

Landshark

To make it a resonant length electrically.

4028. Aaron and Sparky(reunited)

Newsgroup: rec.radio.cb
Date: 2002-05-12 14:45:44 UTC
From: dweebospanka@aol.com
Message-ID: <20020512104544.29236.00007066@mb-mu.aol.com>
Source record: 123893

Scene: Much later in the evening after George has gone home to watch his kiddy porn, we return to find Aaron and Sparky enmeshed in each other's arms.

Aaron: Sparky, I knew you would come around.

Sparky: Well Aaron, I kind of feel guilty…almost as if I'm slipping back into my old self. I've really tried to kick this man habit, but I can't seem to stop having feelings for you.

Aaron: Well Sparky, I always knew we were meant for each other.

Sparky: I only ask one thing of you, Aaron.

Aaron: What might that be, Sparky?

Sparky: All I ask is that you don't breath a word of this encounter to George.

Aaron: Fair enough. I know he's a bit of a bigot.

Sparky: Yes he is, but he's still my only real friend. You know, I can't count the times that he's tried to save me when I've gotten in over my head on the newsgroup.

Aaron: I know Sparky, and he's done the same for me. I really love him, but I can't let him know that.

Sparky: So, we're sworn to secrecy, right Aaron?

Aaron: Absolutely! Remember, we did take the AKC pledge.

Sparky:(chuckles quietly)

Sparky: (tentatively) OK Aaron, I'm all yours.

Scene: Fade to black…

To be continued…

Scene: Sparky and Aaron sitting in bed smoking Virginia Slims

Sparky: Aaron, why is it I love you so much? I've tried to get over you, but I just can't.

Aaron: Well, I really don't know. I feel the same about you, although I've never tried to get over you. I never stopped loving you. I knew you would one day return. If you love something, set it free. If it returns, it was meant to be. If it doesn't, it was not yours to begin with.

Sparky: Truer words were never spoken, Aaron. I guess I'm like a butterfly.

Aaron: (chuckles girlishly for a bit)

Sparky: Oh shit Aaron! What are we going to do about George? There is just no way he will accept us having a Gay relationship.

Aaron: Well, I guess we'll just have to keep him in the dark about it. He's pretty much a moron, and I doubt he'll suspect us. Just keep it low key.

Sparky: I guess so…although we'll have to be careful when we overnight at each other's places. We need to make sure we don't leave our vehicles in front of the house. Better yet, I can clean some of the food crates out of the garage and you can park in there.

Aaron: That'll work. Yeah, we do need to very careful with George…you know as well as I do that he's prone to drive the streets at all hours of the night looking for young girls.

Sparky: (sigh) Yeah.

Aaron: Well Sparky, I think I'm gonna jump in the shower, wanna join me? I gotta get back to bustin those Keyclowns chops!

Sparky: Nah Aaron. I think I'll just grab something to eat while you shower. I'm all worn out now.

Aaron: (grinning)Have it your way…it's your loss.

Sparky:(blows him a kiss)

Scene: Fade to black

<billn@spock.peak.org> wrote:

>You said that antennas do not have a velocity factor. They do, as do all
>conductors. That was why I said you were wrong.

I see where you're coming from. But their velocity factor is
essentially 1 if the conductor is thin, which is the same as no velocity
factor at all. If the antenna is thick, the added capacitance lowers
the resonant frequency and could be thought of as lowering the velocity
factor I suppose. I should have been more specific and I'll concede
that point.

Keep in mind this thread began because someone wondered how a 1/4 wl
ground plane could have 7db "gain". My intent was to point out that no
matter what you do to this type of antenna in terms of loading coils,
the radiation pattern and therefore the gain is fixed by the length.
You can not make a 1/4 wl antenna have more gain by making it
"electrically longer" with loading coils.

Bill, W7TI

Aaron: Well, I guess we'll just have to keep him in the dark about it. He's pretty much a moron, and I doubt he'll suspect us. Just keep it low key.

Sparky: I guess so…although we'll have to be careful when we overnight at each other's places. We need to make sure we don't leave our vehicles in front of the house. Better yet, I can clean some of the food crates out of the garage and you can park in there.

Aaron: That'll work. Yeah, we do need to very careful with George…you know as well as I do that he's prone to drive the streets at all hours of the night looking for young girls.

Sparky: (sigh) Yeah.

Aaron: Well Sparky, I think I'm gonna jump in the shower, wanna join me? I gotta get back to bustin those Keyclowns chops!

Sparky: Nah Aaron. I think I'll just grab something to eat while you shower. I'm all worn out now.

Aaron: (grinning)Have it your way…it's your loss.

Sparky:(blows him a kiss)

Scene: Fade to black

I am. George Busch in Allentown, PA. I'm the one that starts all the trouble in here. I am also Aaron. I run the AKC club from my bedroom. That's where I have to stay while I'm still on home detention from my last robbery. I have lot's of time to play on my puter and harrass and cause trouble. I sleep with my puter. The keys are sticky and crusted with food. Their is a half inch on dust on my screen.

I would just like to apologize to all on this group. My time is almost up and I'll be able to go outside again. The first thing I'm going to do is cap the asshole up the street from me with the big liniar that always walks on me. He splatters my ham radio. That sucker won't even see it coming.

Well you will have to put up with me untill the end of the month. That's when I'll be a freeman again.

Yes, as usual the keyclowns have taken this NG hostage. Posting with gay innuendos, out right forges, and out right harrassing posts. Then they try to blame others, after they create these aol screen names, and say "hey look george made that post" Yet this is something they cry about and say "You can't do that, we will cry and complain to your ISP." Hypocrites .... Well the shoe is on the other foot, lets see who gets kicked in the ass with it.

4051. Re: Ground plane radials?

Newsgroup: rec.radio.cb
Date: 2002-05-12 16:38:05 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3CDE9A6D.3E1E7950@qnet.com>
Source record: 123917

Hello Mark: Happy Mothers Day 2 ya.

The Ground Plane radials should be at Zero degree's, that is flat and level, or Not in a cone shape.

The cone shapped ground plane radials are a trade off, allowing the antenna to have a closer to a 50 Ohms Match, while trading valubaly Field Strength.

I going to make a grund plane radial kit for the I-Max 2000 using the proper 1/4 wavelength ground plane radials, coming out at flat and level. And see how that works. It may rewuier the antenna tuning rings to be adjusted, we'll C.

The one GPR Kit I saw used a cheap sheet metal bracket, with 4ea, 60 inch radials, and the radials where pointed below the horizon. The technical term here is:
Poo Poo

Jay in the Mojave

Hi OM,

No, quite the opposite. The conducting elements are artificial
dielectrics.

The application of a dielectric in a lens (fully aside from preventing
current flow between conductors and such) lies in the ability of a
dielectric to bend the ray of radiation through its property of a
dielectric constant. As this characteristic is also related to
velocity constant, it is with the retardation of wave propagation and
its combination with geometries that form a lens (or prism) effect.

Conductors, too, present identical properties through their tuning and
presenting a delay to the wave propagation that is identical both in
application AND in theory to the Optics as both sciences' effects are
described by the same Maxwell's equations.

This is far easier visualized in the EHF because wavelength scales
allow for the geometric forms to be realized in what we would consider
to be familiar shapes of lenses and prisms.

The reason to call them artificial dielectrics is that they are
conductors, true, which necessarily removes them from the
classification of a true dielectric, but the application of dielectric
constant is found in the assemblage of many off-tuned re-radiators

presenting their mass to a wavefront and causing it to diffract in a manner consistent with their being a true dielectric there. In the HF scales you need a truly large system to approach the same recognizable form and this is nearly observed in the Luneburg Lens antenna. At lesser scales this requires a forced perspective and some find it too shocking to accept the comparison.

Consider, with an example of a lossless, true dielectric and a lossless true conductor found isolated in space and illuminated (yes another optical term employed in RF studies) by an electromagnetic wave; both will cause a delay of its propagation consistent with the notion of either dielectric constant OR velocity factor OR phase combination - they are all the same, not merely similar but identical.

_____
I don't think so. Dielectrics are a completely different
thing from conductors and behave in completely different
ways. I
think this conversation is over.

Bush the elder would have had a phrase for this: Voodoo
physics.
73, Bill W7TI

_____
Hi Bill,

Everything I've offered is realized in both theory and
practice.

A faint reference may be found in Johnson and Jasik to
the point:
"Data on long Yagi-Udas indicate that, for lambda/lamdaz
near 1, loss in artificial dielectrics is likewise
negligible,
provided all joints are firmly press-fit [into a surface
wave
antenna - rwc] or soldered and the metal is of high
conductivity."

73's
Richard Clark, KB7QHC_____

If I've read that last piece correctly, it describes the
losses imposed by a poorly manufactured connection after it

corrodes.
BobC_____

> Hi OM,
>
> As I said, a faint reference, but I fail to see how you
come up with
> this generalization?
>
> 73's
> Richard Clark, KB7QHC_____

It seems the paragraph is mostly interested in making sure the various joints of the antenna are making a good electrical connection more than anything else. I assumed the author was alluding to the dielectrics of whatever oxidation may occur in a poorly fitted or non-soldered/welded metallic connection.

Sorry, you are wrong, its clear that you really don't understand
antenna theory. The electrical length changes with addition of
inductors and capacitors. Doc is still correct with his post.

Doesn't that kind of depend on where you are aiming your signal? How
do the lobe angles compare between a flat and a sloping ground plane?

4064. Recieve range question... preamp? or amp?

Newsgroup: rec.radio.cb

Hey, I have a uniden washington and its been peaked upto about 25 watts AM. I use a A99 about 25 feet up a pole to get out, and I'm on a high point in the terrrain.

My question is this... On sideband, I can hear and talk (with no skip) about 35 miles, to the towns on all sides on me... this is great!

BUT on the regular 40, I get less than 10 miles! I moved out here a year ago, and since then I can no longer here any of my old pals on Ch35 in town (theres about 40 local folks that chat here in raliegh.) I have thought about a preamp as some say they can here my calls, but......

Is this normal? I don't really want to upgrade to a directional (a lot of people I talk with are drivers)

If I get a 350 watt amp with preamp for recieve, will it really help? I have a 100 with no preamp in my car, and it doesn;t seem to make a whole lot of diffrence on trans...(with a 104inch steel whip)

any advice? I have also have a trc-440 here, and when I hook it up theres no change... (And no Sideband!)

By the way, I love my washington. Great price, and with a few mods, Is a great rig (added channels, peaked wattage,power mike with echo and roger-beep)

I can get Far into skip land If the conditions are right...
although that 350 watt amp i've been drooling over would help a lot with that!

What do most people out there run nowadays? around hear there are only 3 or 4 people running amps from home. most have a 250 or so in the car.

CB radio is 4 watts AM and 12 watts SSB. If that doesn't satisfy you,
perhaps you should look into getting a license. For the cost of a
happy meal and a couple hours of study time you could have several
megahertz of spectrum and hundreds of watts available. And then you
won't have to worry about assholes like me turning you in to the FCC.

The Hairy Beast,
I'm afraid what you're seeing is about normal. A
pre-amp will do little goo in your case, a directional
antenna might (big ~if~ there). You pretty well called
it your self, it's propagation, and without physically
moving nearer, or further away, there's ust not much you
can do to change it. Sorry 'bout that...

Has he considered the image that he gives to the world on this newsgroup?
His posts about people's sexuality can only breed contempt for CB around
the world.

> > 8. Allow true freedom to promote legal CB.

How do his posts about people's sexuality "promote legal CB"?

> > 4. Stop promoting illegal keydowns as a recreational sport.
> > 5. Stop promoting illegal freebanding and bootlegging as a hobby.
> > 9. Allow true freedom of speech for those who speak out against
> > illegal CB.

So "freedom of speech" is only for them.
The rest of us should only discuss subjects that the "AKC" will allow.

And my favourite one...
> > 13. Allow a peace-keeping force from the ARRL into rec.radio.cb to
> > provide for the protection of legal CBers against acts of
> > keyclown-sponsored aggression.

"peace-keeping force"??
I think he is in dream land.

What makes him think that the ARRL want to get involved?
What international authority could they possibly have?
Can they take away our rights to "free speech"?
What could they do... whine like the "AKC" mob do now?
What makes him think that they would find HIS attitude acceptable?

How does he think they are being stopped, the ARRL could post on here
just as we can and just as he does every day. But it really is NOT their
place to baby-sit a bunch of cry baby trolls on a newsgroup.

"protect legal CBers"?? I run a legal setup and I don't need "protection".
So, how are they to "protect" the "AKC"... armed guards at their keyboards
ready to kill any message that the AKC do not like?
Can they really not do that for themselves?

Is Georgina "doing drugs" or something?

Brainbuster.

Hi Mike.

Nice radio, even if it is a bit old.
You just don't see many good british CBs, Uniden decided many years ago that the British market was not worth the effort as we will not spend the mone on a decent radio.

Nowadays we just get the cheap rubbish, the RA had to step in and set a minimum receiver spec to stop the manufacturers from producing s**t like the Fidelity 1000.

You know them little hills... down the 54, flash, cat & fiddle etc.
I am on a hill on the other side with a great view of the hills and valleys out my bedroom window.

Do you go into the hills to DX at all?

Brainbuster.

Hi Dennis.

First of all, the virus sends itself... the person is not to blame and may
not even realise.
Secondly, that type of virus is known for "spoofing" addresses. The virus
takes an address from the infected system address book and places it in the
header.
So tracking the actual infected system is not so easy... check the IP number
and see which ISP is being used, that may help.

Brainbuster.

4076. Re: Recieve range question... preamp? or amp?

Newsgroup: rec.radio.cb
Date: 2002-05-12 20:17:07 UTC
From: Jim Hampton <aa2qa@frontiernet.net>
Message-ID: <a24dc94d805726ac8e0576061d16e37b.80792@mygate.mailgate.org>
Source record: 123938

The long and the short of it is this - very unlikely a preamp will help at all. You are beginning to learn something. If you can't hear 'em, ya can't work 'em. Nothing you do on your end will likely improve your received signals, other than a better antenna (higher, more gain, etc.).

Below VHF (30 MHz), you will likely not encounter an area quiet enough where the receiver noise floor is the limiting factor. This means that adding a preamp will only increase the noise you are receiving. One possible exception is if you are running a LOT of coax. If you are using a 50 foot tower a distance from the rig and using 100 feet of coax, you MIGHT be able to improve the received signal by a dB or two, depending upon the coax. In order to do this, the preamp must be mounted at the antenna ON TOP OF THE TOWER! I subscribe to DirecTv and there is a low noise amplifier mounted to the dish - BEFORE the downcoversion and the lossy coax.

One problem you encounter running excessive power is that people you are not interested in communicating with WILL hear you and you WON'T hear them (unless they too are running excessive power). What this tends to do over the long term is congest the legal 40 channels with a lot of noise and make communications past 10 miles or so near impossible (due to a lot of stations ALSO running excessive power).

As you notice, SSB is better than AM. Using modes which consume less bandwidth means that you also pick up less nois due to the narrower receiver bandwidth. Also, you don't waste power in a useless carrier. It takes 50 watts of audio to fully modulate a 100 watt transmitter. This means that of 150 watts total, 50 watts are spread between both sidebands. This means only 25 watts in the upper sideband and 25 watts in the lower sideband. So that 100 watt AM signal is only 3 dB stronger in a given sideband than a stock, legal CB radio! 25 watts vs 12.

Again, the only answer to you is to raise the antenna height or increase antenna gain. BTW, if that A99 is a vertical antenna you should realise how much ground LOSS you are getting mounted only 25 feet up. Probably 4 or 5 dB! If you can get it up to a wave and a half in height (say 48 feet), you will probably only loose about 2 dB. That should effectively double not only your signal, but also double the signal of the station you want to receive! To be equal to free space radiation (no loss), you will have to be up two wavelengths or higher.

73 from Rochester, NY
Jim

Lnux rocks, it has always been my fav OS other than the old DOS. It is much more stable and much less expensive. And for those who like the point and click of microcrap, the desktop environments for linux are as easy as winblows. Before my power supply went out on this machine it had an uptime of 6 months, how many wind0z machines can say that? Plus it comes with some really cool software for my hobbies.

Ah, but consider the job satisfaction of Nick and his helpers.

I mean, I'm sure he is very thorough and professional when it comes to all
that roasting and prodding with tridents and other unfortunate business -
but over the course of all eternity it must have its dull days.

Now imagine that, as they say at the kinematograph:

<deep voice>

"This Time It's Personal".

Not quite. If the antenna is too short electrically, then the loading coil increases the electrical length enough so that it is resonant at the desired frequency.

Getting a feedpoint impedance that is closer to that of the feedline may be a secondary design consideration.

A base loading coil may be intended to perform both functions.

If everyone in the "CB" World, would shut off their Amps (I refrain from saying linear's, because about 95% are not!), The range might double (or more) in distance. This is due to the fact that all the extra garbage spued it to the "air" cuts down the range.

Why don't you guys try that fort one day! It may be a fun experience! Over 30 years ago when I was in CB, I would get from a mobile (legal) with a 102" whip to a base station (good vertical antenna and also legal power). I got over 25 miles (sometimes more)

Frank

_____
I see and understand your point. Although I'm not involved
with research or design I still read my issues of Microwaves
& Rf, Microwave Digest and RF Design magazines. In these I
have read, albeit only partially understood, the concept
you've presented. I guess if I were to bone up on my math
skills I would be better able to follow through the formulae
and more fully understand the authors presentation.
But...I'm old and lazy now. I'll stick to Pease' Porridge.

For the best Plane a 5/8 antenna is to have a 5/8 counterpoise for the ground plane.
This would become a center fed extended zipp antenna., Similar to the AEA isopole antennas on VHF. It sure would be long .

4097. Re: Recieve range question... preamp? or amp?

Newsgroup: rec.radio.cb
Date: 2002-05-13 01:17:16 UTC
From: The Hairy Beast <Emort007@worldnet.att.net>
Message-ID: <wuED8.22474$Ru2.519168@bgtnsc05-news.ops.worldnet.att.net>
Source record: 123962

this is also true where I am... channel 35, 3, and some times 32 are the only stations that ever get used.. sideband pops up all over, but theres lots of dead space around here...

As far as amps go.. I don't have one in the house, and the 24 or so watts my rig puts out when its tuned is of little concern to anyone (at least in the six years iv'e been on air in NC) my amp in the car (200 or so, although i usually have it set to mid) is just enough to keep me talking with the bases around town and chat well with home from work (12 miles) I 'm not going to join an apparent war on this newsgroup over the yes/no amp thing. I just wanted some advice!

As far as ham, I have a lisence, and a rig and I never use it.. The people in ham land around here are all a bit stuffy for me. I get more usage out of my cb stuff, so thats what I want to expand on.

Thanks!

oh ya, Any Idea what type of fire hazzard I'd get from mounting a Antron 99 on my roof? is litghting going to look for it if its well grounded? I have a tv antenna I put up, and its ok so far... but the a99 sticks up a lot higher!

Again, the biggest problem is not the amps (although on 11 meters they are not allowed). But dirty amps which most are. They are not biased in the AB or better range therefore they generate splatter all up and down the other channels and bands. I have an amp which is modified for class AB it works gritty on 10 meters where I use it! It is a 150w amp., but I don't use it on 11 meters.

I'm done. I know this will go on forever.
Thanks
Frank

All I'll need to do is post once maybe twice
and good old George goes on a screen nic, sexual
innuendo, back peddling rampage, LMFAO!
I love how he has made some thirty five plus
posts with at least 22 plus mentioning me, why are you
so infatuated with me? You are the one speaking of
sexual adventures, not me, so please leave me out of
your sexual fantasy's (snicker)
I've shown everyone that he's Aaron and RecRadioCbPolice
and god knows how many other alias's, and all he can do
is throw out the same old accusatory, harassing rhetoric.
George all you have to do is act civilized and I doubt
anyone would give you a hard time, pretty simple isn't
it?

It has come ta our attention dat a coupola copies of the
WINDOWS98/BROOKLYN EDITION may have accidentally
bin shipped outsida Brooklyn. If ya got one a dese, you
may need some help understandin' da commands. Da
Brooklyn Edition may be recognized by da uniquesness of da
openin' screen. It reads: WINDAS 98", wit a background
picture of Grand Army Plaza. When you start da program,
instead a da usual "harpy, stringy" music, you hear da
teme from da Godfadda.
It is also shipped wit a Sopranos screen sava.

Please also note:
*Recycle Bin is labeled "Staten Island".
*My Computer is called "My Friggin' Computa".
*The Inbox is referred as "Da Trunk".
*Deleted Items are referred to as "Wacked", "Erased",
or Rubbed Out".
*Dial Up Networking is called "Da Bar".
*Control Panel is known as the "Da Bosses".
*Performin' an "Illegal Operation" is known
as "Enhancin' da family business" and will actually
maximize WINDOWS98/BROOKLYN EDITION program
instead of shuttin' it down.
*Hard Drive is referred to as "Da BQE Rush Hour"
*Instead of an error message a "You ain't gonna friggin'
believe dis"! pops up.

CHANGES IN TERMINOLOGY IN DA BROOKLYN EDITION

Ok.....Sure ting
Cancel.....fugetaboutit
Reset.....Start Ova
Yes.....Yeah
No.....Nah
Find.....Put a contract out on
Browse...Get a looksee
Back.....U toin
Help.....(Help ain't available -youz don't need no
stinkin' help)
Stop.....Knock it off
Start.....Move it!
Settings....Here's da Rules
Also note dat any voice recognition software run on da
BROOKLYN EDITION platform don't recognize da letter "R".

Some programs and udder accessories dat are exclusive
to WINDAS 98:

Typa.....A word processin' program
Printa.....Printer
Calculata.....Calculator
Solitare.....Seven Card Stud

We regret any inconveniences it may have caused if
you received a copy of da BROOKLYN EDITION.
You may return it to Microsoft for a replacement
version. Youse gotta problem wit dat?

4102. Ignition noise on CB

Newsgroup: rec.radio.cb
Date: 2002-05-13 02:05:22 UTC
From: Mark Haythornthwaite <spam@pacbell.net>
Message-ID: <3CDF1FD7.3EE57892@pacbell.net>
Source record: 123967

Hi, have an issue with noise from the ignition of my Nissan Pathfinder. It is most definitely coming from the ignition, and it is from the antenna coax.

I am reasonably sure my ignition is in good condition, replaced the plugs and ignition wires about 15K miles ago, new rotor and distributor cap 10k miles ago.

My question- Would replacing the antenna lead (wimpy stuff included with my Firestik kit) with quad shielded coax be a good idea?

Any ideas on how to shield my 10g power feed from the battery?

Thanks
Mark

-- The more productive people are, the more governments can tax and confiscate. So the more productive people are, the more costly it is for governments to kill them. Evidence indicates that governments respond to this economic incentive.

Sounds more like an open shield on the coax and/or a hood not electrically connected to the rest of the car. The latter BTW caused Ford in the mid-70s to come within days of having its sales outlawed in Canada. The fix was a copper strip from the firewall to the hood.

So look for a mashed strip and if you have wrecked it lately take it back to have all the grounds reconnected.

I sent the big Sparky sum-up post to
Sparky's e-mail address. It didn't come
back, so he received it. And as I stated
he didn't respond via e-mail.

The things I say about him are true.

He doesn't care about RF in any way--
he just wants to tell people that they
are wrong in a clever and entertaining
way--and he doesn't want to back up
his arguments anymore than he feels
he has to--which is always much less
than is necessary--that's why I won't
dialog with him.

>A base loading coil may be intended to perform both functions.
Bill Nelson (billn@peak.org)<
Yes however the base coil is the least efficient of all. Most antenna makers have already mastered the 50 ohm impedance
requirement so the antenna design now plays toward most efficient with an eye on length (as length ultimately improves performance). Centerload and
topload being the most effective.
Only thing that supposedly will prevail is the 1/4 wave 102 whip...but i dont like em!
Too big and in the way too much.

18 DEMANDS FOR NEWSGROUP TROLLS

1. stop using computer equipment to commit
acts of harassment on the newsgroups.

2. obey the service providers terms of service.
end occupation of rrcb and all newsgroups not
clearly aimed at trolls. end antikeyclown trolling.

3. obey Gods commandment #4 - remember the sabbath
and keep it holy. that means no akc business on a
sunday. give us all a break already.

4. stop promoting anger and hatred as a recreational
sport.

5. stop promoting shooting cbers in the head as a
national passtime.

6. stop acts of newsgroup terrorism which deprives
the newsgroup of a positive public image.

7. Stop the institutionalized "cber" predjudice which
treats legal CBers operating legally but without anger
for others as keyclowns.

8. allow true freedom to promote illegal CB.

9. allow true freedom of speech for those who speak
up for illegal CB.

10. start building illegal amplifiers and distributing
them so us keyclowns can have a wider choice. competition
can only be good for us consumers.

11. ask the fcc to give all frequencies illegally seized into
public hands. this will then stop people being keyclowns as
it will all be legal.

12. recognize the existence of amps and freebanding as cb
topics.

13. allow the ARRL to keep out of cb issues as their name
suggests they are a ham organization. accept that rec.radio.cb
is not controlled or owned by the amateurs.

14. apologize to group users for acts of aggression against
the keyclowns and non keyclowns alike. have committed against
them for several years.

15. apologize to innocent parties for sending emails which state that they are in fact aaron voobner so that they will then put that information on the newsgroup.

16. turn aaron over to the keyclowns so that he may face justice for his newsgroup crimes and crimes against both legal and illegal CBers.

17. accept responsibility for the emails you send out to innocent group users and for the results of those emails.

18. accept responsibility for the fact that antikeyclown aggression against anyone not in your 'organization' is the direct cause of continuing strife in the newsgroup.

the interests of legal operators does NOT outweigh the needs of illegal CBers.

the law-abiding newsgroup users are adamant that the antikeyclowns and other trolls immediately cease mistreatment of all other newsgroup users.

>inductors and capacitors. Doc is still correct with his post.

No my friend, it is you who are wrong. If electrical length could be changed by adding coils or capacitors, the far-field radiation pattern would also be changed. It is not. The only changes are the R+/-jX value seen at the feedpoint, the current distribution along the antenna and the near-field pattern.

Download EZNEC and play with it. Take an antenna, observe the far-field pattern and then insert various loads into it. You will see the pattern is unchanged because the electrical length is unchanged. Now remove the loads and change the actual length of the antenna. Notice that now the far-field pattern does in fact change.

Perhaps you are confused because you think that if, for example, you can take a 1/4 wl vertical ground plane and by adding various coils and/or capacitors, you can make it have the same feedpoint impedance as a 5/8 wl antenna and therefore the same gain. The same feedpoint impedance, yes, the same gain, no. A little time spent with EZNEC should make a believer out of even you.

Well, I did a good search of your past posts. There was SO MUCH
BULLSHIT that I had a hard time deciding just which post best
demonstrates your technical ineptitude. There were so many issues I
had to choose from, such as your wholly imaginary concept of
"self-biasing", your casual omission of the word "constant" when
referring to "carrier modes" used with Class C amps, your inability to
comprehend the nature and effects of harmonics, your poor math when it
comes to bias potentials and transistor impedances, your complete
misunderstanding of the flywheel effect, your suggestion that SWR
should be done with the amp off so harmonics don't interfere with the
reading, your "some distortion and harmonics are acceptable" attitude,
and your use of euphamisms such as "modulator" for a class C driver
amp, and "instability" to explain anything you don't understand. But
eventually I settled on two of your "golden nuggets" of wisdom. I hope
you like my choices:

<snip>
> If the
> antenna won't accept the out of band emmisions that the amp may be
> producing, this would be a frequency change. It's that simple.

It's really not that simple. An antenna (no matter how broad-banded it's supposed to be) is a tuned circuit that can't help but reflect multiples (harmonics) of the main (fundamental) frequency that it's tuned to accept and radiate. In practice (which is Sean's world) CB amps have a high enough unfiltered harmonic content that they can skew SWR readings even though nothing is really wrong (no true underlying problem exists). If the SWR between the amp and the antenna falls to normal when a non-inductive dummy-load is put in place of the antenna (the dummy-load accepts the harmonics) a high harmonic content is the most likely source of the high SWR reading. A high harmonic content isn't necessarily a good thing, but it comes with the territory when CB amps are considered.

In conclusion, I'm somewhat surprised Sean posted something like this. I'm absolutely sure that with his vast experience he's seen production CB equipment combinations that prove me right. In other words, the SWR reading may be high with the amp in line, but there is no underlying problem other than a lack of harmonic filtering. Given that, I'm absolutely sure Sean has let set-ups go where the amp-on SWR was high for no other reason other than a high harmonic content. In contrast, he gives advice here that leads people to believe that CB amps should have a pure output. That's just not going to be the common case.

Subject: Re: power for proposed new fm ch.'s
Newsgroups: rec.radio.cb
Date: 1997/10/01

<snip>
If the majority of CBers knew how much more fun
it is to screw with repeaters they'd be lining up
to get their no-code tickets. (I guess some of them
did [like myself], that's why there are so many no-
coders out there now.)

I recommend that every CBer at least invest in a
cheap scanner that covers the 2 meter ham band and
a thing called a "repeater directory" that covers
your local area. That way you can listen and deter-
mine whether there are any rowdy (CB-like) repeaters
in your area. If there are, I highly recommend getting
a 2 meter radio (an amp, a beam, and another receiver
so you can duplex will make you a big shot) and learning
how to take over your local repeater. I'm tellin' you,
once you figure out 2 meters, you'll wish you never wasted
any money on 27 MHz CB equipment.

Anyone who's interested in doing this, yet has questions
about how to actually get involved in VHF/UHF repeater
terrorism should feel free to e-mail me at: kd6tas (my
no-code ham ticket number) @earthlink.net

As always--have fun.

I would like to agree that including a coil or cap will change the electrical length of an antenna.

An example of this is a trap dipole. I made a trap dipole out of an 80m dipole.

When I got thru installing the traps the overall length for 80m was considerably shorter than I started with. In fact, the length for 40 was also considerably shorter than a single band dipole. I would consider this as a change in electrical length.

Is it not fair to say that moving the current distribution around is the same as changing the electrical length.

Naturally I wouldnt suggest that you could turn a 1/4 wave ground plane into a 5/8 wave groundplane by adding a coil or cap.

The third sentence not necessarily true.

Did anyone say that such would be the case?

Again, your definition of "electrical length" is apparently different
than the one used in antenna theory.

Bill,
Now I can see your problem. Pull your head out
of EZNEC! It's only an aid to understanding what's
happening, and if you don't understand the non-vertual
reality of it, you 'got problems'. The other problem
is that you've got things 'ass-backwards'. There are
a number of ways to describe an antenna. Two of them
are by it's physical length, and it's electrical length.
An antenna's physical length can be measured by using
a tape measure. An antenna's electrical length can be
measured by using it's relation to a wave length at the
frequency it is designed, or used at. Makes sense to
me, I don't know why it doesn't to you. And if that
doesn't at least put a glimmer of light at the end of
the tunnel, I give up. Ignorance is curable. Stupid
is for ever....

Class C can, with the proper design, be perfectly good for AM. That used to be the standard method. But it requires high level audio that can be used to modulate the "plate" of the modulated stage - and any following stages must be linear, not Class C. So the method cannot be used if you attach an external Class C amp to your transmitter.

Not according to Eitner. He thinks that an AM carrier will "self-bias"
the amp into linearity and the flywheel effect will compensate for
biasing distortion.

> wave, will re-radiate a portion of the rcvd signal.

The ground plane radials do indeed radiate. Their combined radiation produces exactly the same effect as the missing other half of the dipole would do, i.e. they produce an inverted virtual image of the quarter wave. All this assumes ideal materials.

However your analogy to a Yagi-Udo antenna with a reflector is wrong. The Yagi already has a full size 1/2 wave dipole. The reflector deliberately distorts its radiation pattern to produce positive gain in the forward direction and negative gain in the rearward.

For any perfectly efficient antenna the mean gain must be 0 dBi, i.e. no antenna can generate power - no free lunches. Gain, whether measured in dBi or dBd is a very crude measure of the distortion in the radiated field produced by the particular pattern of radiating elements. It only has any real value if the direction of the gain is also specified. Polar diagrams are much more informative allowing one to determine whether the gain will be useful in the particular application intended.

> than a transistor amp. Somewhere I have a link to a page that explains
> that very well, let me know if you want it. It's very interesting.

That is interesting, and a bit of a turn about from what had been considered "conventional" audiophile wisdom. From what had been explained to me by some really die-hard audiophiles is that tube amplifiers are richer in even order harmonic content, which mimics real world audio acoustics. This makes the amp sound "warmer" (Another AP term), and more realistic. Look at the specs of some of the top dollar solid state audio amps. They rate much lower in all forms of distortion, yet the audiophiles claim that this makes the amp too "clinical", I.E. it is "missing" some of the nuances that make for fuller audio sound.

They are actually making power V-FET audio amps that mirror the characteristics of tube amplifiers, for precisely this reason.

You may be right though, much of this talk could be more immagined that real. Like the CD vs half speed master LP tests, and how certain people can claim to spot the "flaws" in digital reproductions, or how that high dollar gold plated speaker wire is really better than garden variety copper stuff....

All real antennas have a velocity factor as they have both inductance
and capacitance. Not to mention the fact that the propagation velocity
of a voltage or current wave in a real conductor is always less than 'c'.
Even air has a velocity factor. You calculation as given above will
always overestimate the electrical length by a small amount. A good first
approximation but incorrect.

There was/is a band around 160 Khz, that's refered to as the
Experimenters Band. It's not really a citizen's band per-se, as
commercial equipment for the band was never, to the best of my
knowledge, ever produced. The band allows power output of up to 1 watt,
and a COMBINED antenna/feedline length of no more than 50 feet. Ground
wave propagation at that frequency is excellent, and even at 1 watt of
power, great distances can be expected. The problem is that the band is
prone to all sorts of natural and made made noise, which means narrow
bandwidth modes (Mostly CW) are usually required.

This band never realy received much press, and that's probably why not
too many people know about it.

Couldn't agree more, but I can't figure out which one you are just yet.
Every post I've made in this thread has stated or implied that
electrical length is related to but not the same as physical length, and
that you can not change the electrical length by adding loading coils or
capacitors. That's a simple, straightforward statement and I stand by
it. If you think it is incorrect, please explain if you can.

No it won't. It will change the impedance at the feedpoint, the current distribution and the near-field pattern. But the far-field pattern, which is determined by the electrical length, will be unchanged. An antenna which is 1/4 wl will radiate like a 1/4 wl no matter what you do to it in terms of loading coils or capacitors. This holds true for all wl, not just 1/4.

>An example of this is a trap dipole. I made a trap dipole

That is correct, you did change both the physical length and the electrical length. You started with a 1/2 wave 80m dipole and by adding traps and reducing the length you now have a dipole which is resonant on 40 and 80 meters, and which is 1/2 wl on 40 and something less than 1/2 wl on 80, due to the loading effect of the traps. Do not confuse resonance with wavelength. It is possible to take an antenna of ANY length and make it resonant by adding the proper coil or capacitor. That DOES NOT, however change it's electrical length. If you start with a 1/2 wl antenna which is resonant and add loading coils or capacitors to it, you will end up with a 1/2 wl antenna which is no longer resonant, but IS STILL 1/2 wl. Some people have a hard time grasping this concept for some reason. To me, it's quite straightforward.

>Is it not fair to say that moving the current distribution
>around is the same as changing the electrical length.

Moving the current distribution around does not change the electrical length. Whether that is "fair" or not, I can't say.

>Naturally I wouldnt suggest that you could turn a 1/4 wave
>ground plane into a 5/8 wave groundplane by adding a coil or
>cap.

Glad we agree on that. Some people think that IS possible and that's what started this thread in the first place.

You are right and I stand corrected. I should have said that the
velocity factor on a relatively thin antenna (uninsulated wire) is so
small as to be safely ignored. Small but not zero.

End effect is a different matter however, and can not be ignored. To
the best of my understanding, end effect does not affect the velocity of
propagation down the wire and therefore does not change the VF of an
antenna. It does lower the resonant frequency just as VF does, but the
cause is different even though the effect is the same.

Got no problem with Class C as the modulated stage and in fact the modulated stage has to be non-linear to act as a mixer. I get off the trolley when we try to amplify the resulting signal with an amp that does not conduct at least half a cycle.

Some of the great arguments around here with Class C seem to believe one can get the efficiency of a classic 120 degree Class C without the squaring of the waveform inherent with the grid-leak biasing usually used on these beasts. Then we get into tank design where the grid side has to be able to buffer the driver against load impedences that swing all over the place and an output tank to handle the 'harmonic-rich' output from clipping the waveform. The proper design you mention has a lot more in it than where we place the tube on its Eg-Ip curve.
Solid state changes the parameters without changing the underlying problems.

No one actually stated that, you assumed that someone had made that statement. You just have your terms backwards. Electrical length can and is changed by coils or capacitors. The patterns are determined by its physical length. Why is this so hard for you to understand?

No, you will see the pattern is unchanged because the physical length
is unchanged. You even proved what everyone has been telling you by
your statement " Now remove the loads and change the actual length
of the antenna. Notice that now the far-field pattern does in fact
change."

>

>Bill, W7TI

I don't think that you take a 1/4 wl antenna, add coils and make it have the same gain as a 5/8. I never made any such statement. Sounds like your the one that needs a little time playing with EZNEC,and some real time actually playing with antennas. Do you know what the feedpoint impedance of 5/8 antenna is? What would you add to it to bring the feedpoint impedance to 50 ohms, a coil or capacitor?

sparkle did you miss the post where he mentioned how he has already contacted the seller via private email regarding this auction? he'll be able to handle it directly much better anyways since the collins is local to both sdj and myself i cant blame him. why make the minimum bid for 2g's when he can get it cheaper after auction?

How and why is the field pattern changed by changing the electrical
length? To be more specific, take a dipole and add loading coils to
each leg, but keep the same physical length and freq. Disregarding
matching, efficiency, etc, how does the radiation pattern change?

Hi, have an issue with noise from the ignition of my Nissan Pathfinder.
It is most definitely coming from the ignition, and it is from the
antenna coax. <<

I was going to say a possibility exists this type noise could be coming
from the fuel pump, but since you say it is entering through the coax, I
assume the noise goes away when you disconnect the coax....I'd check
each and every aspect of the antenna system before I went messing around
with my vehicle.

>My question- Would replacing the antenna lead (wimpy stuff included
with my Firestik kit) with quad shielded coax be a good idea? <<

Any upgrade in coax is usually an improvement.

BTW sorry for the previous cross-postings! I just wanted the most/best responses? I felt that the question was appropriate for all of the selected groups and instead of posing it in each separately I did them all at once. However I see that many take offense to this seemingly because each group has its own 'clique's and doesn't appear to get along. If the question asked is inappropriate then don't answer it. I do not see ant responses to the posts with messages " this is only a test" why are there not hundreds of replies telling that individual it is wrong? I see that when the discussion becomes heated and some are at a loss for a good reply or their ignorance has become apparent that they take offense to the author of the original post whom they subconsciously blame for all their faults and frailties.

> Bill, W7TI

Well here is one to try;

end feed a 1m long whip at 433MHz, and try the same with a
coil at the centre of about 125nH.

If the coil did not change the far field pattern then co-linear
antennas wouldn't have gain and a reasonable pattern.

The coil provides the phase shift to get both parts of the
antenna to be in phase and provide gain at zero elevation.
Without the phase shift the pattern is much different.

Bill,
Very simply, you are using the terms 'physical'
length and 'electrical' length of an antenna with
reversed meanings. I can change the electrical
length of an antenna by adding a coil or capacitor
to it, and keep it's physical length exactly the
same. And, that coil or capacitor has nothing to do
with matching feed point impedances. Nothing new
with that, it's been done for years If it isn't
apparent in your EZNEC, then you are using the program
incorrectly, or, without sufficient understanding.
There is your explanation. As to which catagory I,
or you fall into, make up your own mind. I have.

>he's right. put a lowpass filter between the amp and antenna and watch the >swr's go back to fairly normal

That would be fine if not for the power wasted on harmonic energy. Also, a filter doesn't filter the splatter across the band. Neither does it prevent harmonics from radiating from the system ahead of the filter. And not knowing where the harmonics are or where the filter's poles are, the filter might just be useless. That presents another problem, because a filter's poles are usually fixed while a broadband amp is used over a wide spectrum, creating harmonics across a much wider spectrum. And then you need to consider the level of harmonics and splatter (and other unwanted RF such as IF residuals, broadcast coupling, etc.) being amplified and/or created with regard to the amount of attenuation needed to get the signal back within reasonable operating params. Of course it's much better to fix the harmonic problem at the source, by either redesigning it properly or removing it entirely.

No, Timmy, high-power RF ain't a plug-n-play environment.

There is one thing a Class C amp is going to do for damn sure: reduce the modulation percentage. Couple this with the limiter clip that cuts average audio by at least half and this half-assed 'swang' movement and it is a freaking wonder anyone communicates. It is however no wonder whatsoever that the channels are one solid hetrodyne.

BFD, it is just a lot easier to see with hi-impedence circuitry. The
Class C trick with bi-polar transistors just makes a proper tank even more
ridiculous and harder to match a variable load to an exciter and suppress
the crap. Personally I like FETs and FET packs.

_____

It's hard for me to understand because it's not logical. If something looks like a duck, walks like a duck and quacks like a duck, it's probably a duck. If something looks like a 1/4 wl vertical, radiates like a 1/4 wl vertical and has the physical length of a 1/4 wl vertical, it's probably a 1/4 wl vertical. Something which is shorter or longer, has a different radiation pattern and doesn't look like a 1/4 wave vertical probably isn't a 1/4 wave vertical, despite what may have been done to it with loading coils or capacitors.

Beyond that, I have run out of arguments, at least for now.

>each leg, but keep the same physical length and freq. Disregarding
>matching, efficiency, etc, how does the radiation pattern change?

_____

The answer will be a bit long, so bear with me.

The radiation pattern is the vector sum of radiation from all points along the antenna. Think of the antenna as broken into hundreds or thousands of individual segments, all with their own unique current and phase angle with respect to the other segments. Each segment radiates a unique wave, and the waves from all the segments combine to produce a single wave front at a sufficiently far distance. This is known as the far-field pattern. Don't confuse this with the near-field pattern, which is what you would measure if you were close to some segments but far from others - in other words, right next to the antenna.

If you insert a loading coil or capacitor but leave the physical length of the antenna unchanged, you will change the current distribution along the antenna, its impedance at the feedpoint and its near-field pattern. Oddly enough, the far-field pattern will NOT be changed, because the new changes in one segment are compensated for in others.

The only was to change the far-field pattern is to physically lengthen or shorten the antenna. This changes the relationship between segments in a way that loading coils or capacitors do not. I confess the mathematics of this is beyond me, but the antenna analysis programs such as EZNEC handle the calculations easily.

Download a copy of EZNEC from www.eznec.com and play with it. Set up an antenna and note the far field. Add loading coils and/or capacitors and you will see the far field unchanged. Change the length however, and you will see the far field does change.

To summarize: An antenna which has a certain electrical or physical length will always have the same far-field pattern for a specific frequency. Adding coils and/or capacitors will not change that pattern, but changing the length will.

I think that should be clear, but if not we can carry on. :-)

I am one who is not totally impressed with CD sound but for a somewhat
different reason. When you record 64 tracks in the orchestra you get a

mix of what 64 players hear. Fine except they are playing in Carnegie Hall with its own acoustics that manage to blend the orchestra into something really nice. Like being a football coach or an infantryman, the worst seat in the house is the center of the action. Yup, cellos have wolves and the cello player knows it but the recording technique makes sure everyone in the house knows it as well.

This tends to follow styles: The violinists of previous generations were lauded for playing with feeling and making their instrument cry, now we wonder how we survived this idiotic sawing.

Rather than even-order harmonics I suspect phase delay is more the issue: I do not have 64 ears.

>Bill, W7TI

Clear enough. So let's start with an unloaded antenna, a 1/4 wave vertical for instance. Let's say that it's 102" at 27 MHz. Then we shorten it to, say, 66" and add a loading coil somewhere, anywhere, go get it back to resonance at 27MHz. Now since we have not changed the frequency, and since it has the same electrical length then the far-field pattern will not change. But we also changed it's physical length, so the far-field pattern DOES change. So which is correct? Does it change or doesn't it?

Ok, I will concede that example does change the far field pattern. I have not worked with antennas that long because I am an HF guy only and I will stand corrected there. One meter at 433 MHz is about 1.44 wl and that is outside my experience.

On the shorter ones normally used at HF, especially where someone wants to make a 1/4 wl into a 5/8 wl, I stand by my previous statements. That was where this thread originated and that was what I was focussing on.

Your example was an eye-opener and I thank you for it.

Changing the electrical length from 1/4 to 5/8 WILL not change its
far field pattern. What is your problem that you can't understand
what electrical length is? Run your EZNEC with a 1/4 wave, add a coil
and see if your far field changes. IT does NOT. If you aren't
capable of modeling an antenna, I will be happy to send a run to you
with instructions on how to use EZNEC.

Hi Bill:

Actually, you can change the "electrical length" of an antenna by adding loading coils or capacitors. The electrical length of the antenna is defined by more than its radiation pattern characteristics. For most relatively short antennas, their electrical length is defined more by their impedance characteristics than their pattern shape. For example, consider 0.2 WL monopole, which has an impedance of approximately 22 - j77 ohms. We can add a coil somewhere near the base of the antenna to bring its feed point impedance to resonance and in this manner will have changed the effective electrical length of the antenna. The radiation patterns of the antenna will not appreciably change because the pattern characteristics of relatively short antennas are primarily determined by their physical height.

As the length of the antenna becomes longer with respect to the wavelength, adding coils will significantly change the pattern shape of the antenna. Add a loading coil to a 7/8 WL antenna in EZNEC and see what happens to the pattern.

In the dipole example given, you have changed the radiation
pattern in the far field.

By adding a loading coil to each leg you have now changed
the electrical length because the current distribution has
changed.

You effectively shortened the necessary length of the
antenna for a given proper current distribution. The amount
of physical antenna length remaining outside the electrical
length now enters into the equation.

Now you have a length of wire dangling off the ends that,
depending on the length, begins to contribute its own
radiation which combines in either a positive or negative
phase depending on which lobe you're looking at. The

radiation pattern is changed.

It's not too difficult to understand, twist. You think other people
are obsessed with you and they aren't. They, including myself, just
like to prod you once in a while because you are a hoot when you get a
little attention and go into a frenzy. You are a source of amusement,
twist, nothing more.

This might sound too simplistic for some antenna guru's which I am not, so please bear with:

Review of the basics: A 1/2 wave dipole has high current and low potential in the center, and low current and high potential on the ends. The center provides the "magnetic" component of the EM wave and the ends provide the "static" component. The interaction between these two components is what makes an EM wave.

Now, if you physically shorten a 1/2 wave dipole with loading coils, while still maintaining an electrical 1/2 wavelength, then it's still a 1/2 wave dipole: It still has low-impedance at the center and high-impedance on the ends. Therefore it's still going to make EM waves in the same manner as a "full-length" dipole. And it follows that if everything else is the same then the radiation pattern will be the same also. And it is -- a single lobe. The only difference is that the lobe is smaller because the shortened antenna is less efficient.

When electrical length is unchanged, physical length affects the radiation pattern only in magnitude, and then only because physical length affects radiation efficiency.

And a bit further:

The radiation pattern off the side of a 1/2 wave dipole is, as we all know, a single lobe. The pattern is symmetrical because the antenna is symmetrical. A lobe from a vertical isn't symmetrical because of the ground, so for the sake of discussion we'll assume free space.

Now, if we take that 1/2 wave dipole and make it electrically longer than a 1/2 wave for the same frequency, the excess antenna length introduces radiation in addition to that from the 1/2 wave section, and this additional radiation is partly in the same space as the original lobe. This causes wave interference, and that wave interference is what defines the new pattern of the lobe.

If the radiation from the excess antenna is greater than, equal to, or nearly equal to, that of the 1/2 wave section, then the interference becomes significant enough for the lobe to differentiate into multiple lobes. And that's exactly what happens. But don't forget that this is caused by "wave interference": i.e, the original single lobe is still there, it's just being propogated in the same space as another lobe. They are in-phase at some points and out-of-phase at other points, creating sharper lobes and nulls.

Ok, I went a bit too far, but I hope everyone gets the idea.

Do you have a public library somewhere at your disposal? Did you ever
learn to use the card catalog? Ok, that's a bit old-school, but you
know how to ask the librarian to find a book for your, right? Good.
Now go ask that librarian to locate the book by Kellejian from which
that formula was quoted. Here's the pertinent information:

Title: Applied electronic communication.
Author: Kellejian, Robert
Pub: Science Research Associates, Inc
(A Subsidiary of IBM)
Copyright: 1980, 1982
ISBN: 0-574-21535-2
And if you want to find it on the shelf yourself, 621.38

I already gave you the page number. Look it up or shut up.

It's not about whether PEP = Vp-p * Ip-p is a proper formula.

It's about whether PEP = Vp-p * Ip-p can be used as a proper
formula for determining the Peak Envelope Power of a radio
transmitter. It can not.

What this is really about is your inability to admit that you can be
wrong. And I do believe that most people out here understand
that. They also understand the trickery you use to cover your tracks.

> Does it change or doesn't it?

I think it changes. Perhaps not in a major way but enough to
be noticed.

I would start by suggesting that shortening the physical
length, despite adding a coil to bring the current back into
the proper phase, changes the characteristics of the
wavefront. I'm not sure how I should illustrate this.

It seems to me that the larger antenna presents a larger
wavefront for a given antenna current. In reverse, the
larger antenna "cuts" more of the incoming wavefront
allowing more voltage to be developed at the rcvr terminals.

In this light I would say the far fields are different
between the two antennas.

I believe there is a scientific theory and formula for this
but I can't remember it.

I'm not satisfied with the way I presented this and await a
reply which might get me to thinking about a different way
to illustrate my thought here.

Yes, I'd like to see that page. Sounds like nonsense to me...
My personal opinion is that tubes have a unique sound because of
"microphonics". One only needs to look to the physical differences between
transistors and tubes for certain performance differences...

Frank,
Believe it or not... most amp interference problems are caused by over driving. I don't care what class amp you are operating... that amp will have greatly increased harmonic content as you enter compression. This is where the amps power is flattening out, no matter how much more drive is applied. Even a linear amplifier is not linear in that area and will have increased harmonics. People on the CB are notorious for operating amps way up the compession area...

> change the electrical length of an antenna.

I should have qualified this statement as a broad statement.

What I should have said was adding the coil will change the
electrical length if you don't change the physical length to
offset the added electrical length.

By adding a coil to a unloaded dipole you make the
electrical length too long for a given frequency.

Sorry Randolph, don't try to push your and Landshark gay lifestyle on me. It has been proven that he is a blatant homosexual who posts to alt.sex.ts NG's and you I am afraid are following in his footsteps it seems talking about gay groups etc. It seems Randy you are speaking from experiance.

Source record: 124090

this is the wierdest shit out there when it comes to radio,all the ducks get and ham radio wannabes or whatever that akc bullshit is is nothing but a big JOKE.

you guys get on here and are not even down with the trill.sayin this and that,it wouldnt suprise me if all these post came from no more then 10 bored ass mud-ducks who get on here cause this is the only place they can be heard or get a reply.

some of you people (radio junkies,immature hams)should be ashamed of your-self getting on here trying to make the people that are there life more difficult or just slappin your gums talkin shit.

my point is DONT TALK ABOUT BE ABOUT IT.all this talk dont mean a damn thing,i could give less then a damn about what people want,what you want is not what you have!!!and not always what you get.

if you have noticed none of the big boys are out here poppin shit.why?they got better things to do then show there ass or how much they know.

and to all the voobie punks out there,just let it go,you guys will never have any control over the sales of illegal equipment,and probably dont have nuts to confront anyone that looks like they could kick your ass.All you guys do is run your mouth,are you guys gonna get on ch19 and try to take all of the illegal radios and amps those drivers have,i didnt think so,actually come to think about those akc guys could be truckdrivers just aggitating people they know run base stations or talk skip.

anyways while you guys set around and talk about all the shit you dont have,ill be gettin money,slammin cadilac doors,choppin blades and maybe even puttin some real dick in your wife life,and i got down.

bye i yi yi yi

Once again, I hate to point out the obvious, but I will take the dubious honors of doing so:

We all waste time here. Nothing of real importance happens here, other than pointing out the obvious flaws of the others who may choose to post. And yes Dick, that includes you. But then again, I'm sure you knew that.

Wow! Appears that there are some serious gaps in this compilation of data. I wonder if it could be "slightly" skewed? No way! What was I thinking? LOL

What would be interesting at the 'shoot outs' is a slightly different
rule. Two competing stations would each be given a different 20 digit
number. All digits zero through nine would be included twice each. The
order would be different for the two stations. Upon being given the
signal to commence, both stations would try to relay their 20 digit
number to a listening station (complete with a tape recorder). After
60 seconds, they would be forced to stop. If either station succeeds in
passing their number through correctly (as corroborated by the tape),
they win. If neither station succeeds, no award is given. Louder is
not necessarily better. Not only do you have to hear 'em to work 'em,
it helps to understand them too ...

oh well ...
anyone for class D switchmode?

I'll be honest with you. Yes, I've got ideas. Yes, I've got manuals.
Yes, I'd hire an electrician with EXPERIENCE in this sort of stuff to
wire and guarantee the grounding. I would not trust my limited knowlege
nor my possible mis-interpretation of a book. Hire someone.

Admirable suggestion! A simulated DX pileup rather than a battle of the
car stereos.

You might want to prohibit digital AM or you might very well get Class E
switchmode.

Yes, lightning will "look" for it, and even more so if it is well
grounded...but that's also your protection from having something
catastrophic happen. If lightning hits it, any fiberglass antenna will most
likely sacrifice itself to the God of Lightning, but you will still be far
better off for having it well grounded. That being said, never, never, never
leave your antenna connected when not in use. I've been hit 3 times and have
never had the antenna connected, but have still lost consumer devices to the
proximity charge, just no radio equipment. Always use at least an 8 foot,
copper clad or better ground rod, with a minimum of #2 copper wire for the
lead.

BBBBBWAAAAAhhhhhhaaaaaaaaaaa,
George, that's the best you can do to divert attention
away from you being Aaron? Boy, I'll tell you, you are
really scraping the bottom of the excuse barrel now.
I'll make you a deal George, you go for one week
with making posts without some sort of reference to me,
I'll never use that signature file again! I can keep my word,
but I really doubt you can do that, so what you say?
Also that goes for your alias too, so don't bring them out
of mothballs to take your place.

Landshark

PS, that also applies to your Aaron alias too.

I usually don't make deals with guys who cannot keep the ones they were supposed to before(ala imaginary kill files, post below) but If you Remove the sig file in it's entirety and do not use any references towards me for a week I will do the same. Sorry to burst your bubble, no matter how much you wish it to be true I am not Aaron so I cannot say what he is going to do, he is his own man. I am also not held responsible for scotts forges of me. Take it or leave it. I am not Monty Hall

Funny Part is you can add all the posts up and count them as me since I am not Aaron, he e-mailed me and was somewhat mad that he was being called George, I also remember Doug is Aaron, No Leland is Aaron, No Frank is Aaron, Dwight is Aaron, No George is Aaron. If it makes you feel happy, oh btw my name is not George.

I was in MD for the entire weekend visiting Fernald and the folks. Even stopped in at Buzzy's for a T-shirt and a fair dollop of St. Mary's County wisdom. I was going to mention my upcoming absence but decided at the last minute to let it play out unannounced. Upon my return I see it HAS played out and in what suit of spades it has been dealt. The forces of keyclown-ism are certainly getting what they deserve. Based on my observations you keyclowns have whipped up quite a bit of opposition without me investing a single erg of effort. As the esteemed Mark Fuller and the legendary N8 before me have likely concluded, I need not even be here to have a huge effect. What anyone thinks of me doesn't matter. The fact that illegal Cb no longer rules the NG is what's significant.

-Aaron-

Hey Brian, wasn't it you that said "linearity is not required for AM"?
Well, believe it or not... most amp interference problems are caused
by the amps! Most CB amps are unbiased Class C splatterboxes. The
funny thing about those amps is that you may not even notice any
distortion in the audio, but your neighbors will hear you lima charlie
through the TV.

Well let's see now, the formula came from a book on radio
communication, and it was in a section about single sideband
modulation, so what the hell else would it be used for? Duh...

>What this is really about is your inability to admit that you can be
>wrong. And I do believe that most people out here understand
>that. They also understand the trickery you use to cover your tracks.

What this is really about is the fact that -you- can't admit that
-you- were wrong. And lately it has become an obsession with you to
the point that you can't leave it alone. Do you really think that you
are going to make me deny the facts just because you can't accept
failure? Is that why you refuse to find that book and verify that I'm
telling you the truth? Are you afraid of the truth? It's ok, you

wouldn't be the first person in this newsgroup to have that phobia.

It has plenty of importance, Randy. Case in point: How is interference
from one-way skip any different than interference from two-way skip?

Actually the Johnson's weren't bad radios, I knew someone guess in the mid-seventies that had one installed. Great sounding radio but didn't catch on due to their quirky design but my friend used to talk 7-12 miles easy using a 102 whip out in the country. The final versions had PLL02A chips that were a breeze to modify.

It's not required... but it sure does cut the harmonics.

You are 100% right about the distortion... if you don't operate a class C amp in the compression area, your audio will be perfect. However, the harmonic problem remains...

Depending how far into Class C you go, and I will agree that your Muntz didn't go far enough to be really dangerous or even useful, it will reduce the modulation percentage substantially.

Same old same old, if you like meter readings enter a meter reading contest. If you plan on communicating it takes audio limited to 100%, compressed, bass and treble cut ruthlessly, peaked at about 1200 Hz. When you have decent audio, you don't screw it up in Class C.

It is similar because they both deal with technical topics that can be easily hyped into marketable products for the gullible and those foolish enough to believe the hype.

There are as many audio amp jockeys with off-the-rails voodoo science, as there are CB amp jockeys. And the guys making the equipment are laughing all the way to the bank....

"Working fine" is a subjective term. What has to occur for the amp to
"work fine"?
If all you care about is a larger signal out then what you put in, then
I guess you might say that it "works fine".
However, it is not being very spectrum friendly or considerate of other
users to use an amplifier that distorts your signal and radiates
undesired spurious emissions all over the band, possibly to the
detriment of other people trying to share the resources of the radio
service.

Back off a bit Sparks, the man has a point and it is one I have seen and continue to see on the ham bands. As one poster here correctly noted, doing AM decently requires an amp with lots of headroom in the linear range. Give someone who has no clue an amp like this and he will overdrive it every time. Lacking the test equipment or the knowlege to use it, he will produce stupidity.

The challenge to Brian is to design a relatively idiot-proof amp which is a job I don't want.

And, of course, there is the minor matter of the customer who gets this vision of Nirvana and likes the sound of alternators moaning and the smell of wire burning and has zero clue about what power actually accomplishes. He believes this 'outlaw' crap and somehow believes the guy building crap amps in his garage actually knows something. Kind of like believing your friendly neighborhood drug dealer has your best interests at heart. Yeah, sure.

So you have the combination of an almost-religious fervor, a total lack of knowlege, and guys making bux shearing the sheep. What a country!

Kind of curious what you hear other than old airport beacons. Being an
apartment dweller there is not a lot I am in a position to do with 136
kHz.

The Army did a lot in the brown-shoe days at about 170 kHz and the bloomin
Naivee lived there but there isn't nothing like an ocean for a ground is
there?

Now that it is an official ham band, the receiver mfgs may do a decent job
down there and up conversion does make the job easier. Most of the rigs

of past years would have to be brutally shaped up to be junk.

Report back, Dave.

You are a good candidate for a trip to the physiologist. You have no
concept of truth. You can't admit when you are wrong. All you really
end up doing is wasting time. So I won't bother wasting it with you.
Rather I'll just post your PEP formula and post mine. It will be laid
out there for all to see. Participants of this group are a lot smarter
than you think. They'll know who really knows and who really
doesn't.

Peak Envelope Power of a radio transmitter....PEP

Sparkys ....PEP = Vp-p * Ip-p

Tnoms ....PEP = * Volts rms times Current rms
* measurement taken at a modulation peak

>harmonic problem remains...

For starters, transistors don't "compress", they "saturate" and
therefore "clip".

Second, and we have been through this before, a no-bias amp isn't
"just barely" class C or "almost" class B: Eitner gave you the wrong
dope on bias potentials. He assumed a 50 ohm input impedance on the
base, when it's more like 1 ohm or less. The result is a much larger
cutoff time than he claims. It also means a reduction in your maximum
modulation, because if you modulate into cutoff you are going to clip
the RF on your peaks, and that is going to get you heard on several
channels up and down. Since most CBs are set for close to 100%
modulation, most CBs are going to modulate right into the cutoff zone.
The rest of the CBs have their limiters clipped and will bleed on the
whole band. And that's exactly what happens.

Also, your crossover distortion isn't going to be heard in your audio;
that is, unless you are listening on a radio tuned to one of the
harmonics. And by shortening the cutoff time with near class B bias,
you are just sending your harmonics higher into the spectrum.

Finally, linearity IS required because it's the non-linearity that's
causing the harmonics!

From: aa2qa@frontiernet.net (Jim Hampton)
What would be interesting at the 'shoot outs' is a slightly different rule. Two competing stations would each be given a different 20 digit number. All digits zero through nine would be included twice each. The order would be different for the two stations. Upon being given the signal to commence, both stations would try to relay their 20 digit number to a listening station (complete with a tape recorder). After 60 seconds, they would be forced to stop. If either station succeeds in passing their number through correctly (as corroborated by the tape), they win. If neither station succeeds, no award is given. Louder is not necessarily better. Not only do you have to hear 'em to work 'em, it helps to understand them too ...
oh well ...
anyone for class D switchmode?
73 from Rochester, NY
Jim

Interesting concept....perhaps letters would be more efficient due only to the phonetics involved..a repeat of "Echo Echo Echo" is more likely to be understood than "Five Five Five".

CB radio is 4 watts AM and 12 watts SSB. If that doesn't satisfy you,
perhaps you should look into getting a license. For the cost of a happy
meal and a couple hours of study time you could have several megahertz
of spectrum and hundreds of watts available. And then you won't have to
worry about assholes like me turning you in to the FCC.<<

Who ever worried about anything you could do?

If you have ever had your TV interfered with, or heard loud voices swearing on your stereo or computer speakers, you have been the victim of a "CBer" using an illegal amplifier. CB radios are permitted only 5 watts of power output by the FCC.

Yet many CBers use illegal RF amplifiers in defiance of the law. These "outlaw
CB" guys think they can get away with it and laugh in the publics face. Here is one of the worst, (below) a fellow who makes a living from selling these things and promoting their use.

If you want to help, send a short note to INFO@FCC.GOV and perhaps copy this email as reference.

Thank you,
A. Voobner

Subject: MOBIL AMP SALE
Date: Sat, 14 Apr 2001 19:09:40 GMT
From: "Train" <cbmods@optonline.net>
Newsgroups: rec.radio.cb

As a public service to the NG, I will be offering to sell mobil amps to those wishing to buy them. This is not done out of greed but out of necessity to thwart the losers in the NG who think they have taken over OUR nice little group and can use it to harass and belittle as they see fit. To
offer sale of these items is just the thing needed in a public forum to mess with these nil-minded simpletons. Amps such as Texas Star, Palomar, Cobra,

Messenger, Gray, Galaxy, X-Force and so on. These will be sold for a limited time and at a VERY small profit IF ANY !

This is not a money thing so much as it is an access thing.

Since these self appointed radio/computer gods have declared knowledge an illegal thing also, I might just make the entire Secret CB book series available on CD along with a CD of amplifier schematics for base and mobil amps. Why is it that when these morons just think they are getting somewhere in their fight somebody like me comes along and pisses on their parade? BECAUSE THEY NEED IT AND DESERVE IT!!!!!!!!!

E-Mail me with your needs.....

Legendary, Aaron? The only place I've ever heard about him is on this
NG. How about Lew McCoy or Bill Orr? Now there's "legendary" status
among the radio community, both amateur and CB. Yes, Bill Orr wrote a
very informative and comprehensive book on CB antennas.

Brian,
I strongly recomend that you pay attention to what Sparky has been
telling you.
He has been right on so far; especially about the single relay
causing feedback
into the exciter.
He didn't mention that it can also cause self-oscillation, and an
input impedance that varies with power output levels.
But keep this discussion going because it's the most interesting
thread I have
seen posted on this newsgroup in a year.
Regards,
Dennis<<

BFD! Even Sparky is entitled to be right.....once. This merely tells us he now bows to Dennis AND Bill, putting them at the top of the people he wishes he was more like. Pay attention and read between the lines..he emulates several on this board.

>>* measurement taken at a modulation peak

If your formula works so great then use it and plug in the numbers!

What's wrong Sparky? Why won't you use it? Could it be because it
does not apply to the Peak Envelope Power of a radio transmitter?

No need to quote references! No need to go on a tangent! Just use
your formula. Plug the numbers in! ....Here. I'll show you how
your formula does not work.
****
PEP = Vp-p * Ip-p

If the above worked then take a 100 watt carrier at 50 ohms.
and give us it's PEP

answer = 4 amps p-p * 200 volts p-p = 800 PEP watts..WRONG
****
Additionally take this same signal and 100% modulate it
and give us it's PEP

answer = 8 amps p-p * 400 volts p-p = 3200 PEP watts...WRONG
****
The problem is that your reference is not referring to the Peak
Envelope Power of a transmitter. It is referring a Peak to Peak
power that is never used in standard RF power measurements.

> power that is never used in standard RF power measurements.

I think he wins this one Sparks. The key here is both dead carrier and PEP are in water-heating watts (RMS) not in peak watts at least for purposes of writing rules.

If you are designing an amp and tank circuit however, it is wise to remember that in a perfect sine wave, RMS is .707 of the peak value so both the voltage across your tank and the current thru it is also .707 of peak.

On the standard 120 VAC line drawing an amp RMS the peak is close to 175 volts at an amp and a half into a resistive load. So the 120 watts RMS is twice that at peak. So the peak power of a 100% modulated AM signal is in fact 32 watts. How's that for headroom?

And now we see where the swang artists sell their wares.

Incidentally, Tnom, the formula is W = V * I cosine theta. Theta is, of course, zero in a resistive load but this can become of interest off resonance. 'Never used' is a bit strong a term, Tnom. One place I am very interested in P-P is when designing the voltage doubler in a microwave oven; the doubler cap gets the full enchilada.

>NG.

Indeed there are legends about N8 such as; his not having a job, his being overweight, his being a child molester, etc. These legends were in fact originated by the keyclowns in this NG. I believe this qualifies my use of the word "legendary".

>How about Lew McCoy or Bill Orr? Now there's "legendary" status
>among the radio community, both amateur and CB. Yes, Bill Orr wrote a
>very informative and comprehensive book on CB antennas.

I think those two are grand masters of the ARS. I don't know any 'legends' they generated except for their fine articles and texts.

If you have ever had your TV interfered with, or heard loud voices
swearing
on your stereo or computer speakers, you have been the victim of a
"CBer"
using an illegal amplifier. CB radios are permitted only 5 watts of
power
output by the FCC.

Yet many CBers use illegal RF amplifiers in defiance of the law.
These
"outlaw CB" guys think they can get away with it and laugh in the
publics face.
Here is one of the worst, (below) a fellow who makes a living from
selling
these things and promoting their use.

If you want to help, send a short note to INFO@FCC.GOV and perhaps
copy this

email as reference.

Thank you,
A. Voobner

Subject: MOBIL AMP SALE
Date: Sat, 14 Apr 2001 19:09:40 GMT
From: "Train" <cbmods@optonline.net>
Newsgroups: rec.radio.cb

As a public service to the NG, I will be offering to sell mobil amps
to
those wishing to buy them. This is not done out of greed but out of
necessity to thwart the losers in the NG who think they have taken
over OUR
nice little group and can use it to harass and belittle as they see
fit.
To offer sale of these items is just the thing needed in a public
forum to mess
with these nil-minded simpletons. Amps such as Texas Star, Palomar,
Cobra,
Messenger, Gray, Galaxy, X-Force and so on. These will be sold for a
limited
time and at a VERY small profit IF ANY !

This is not a money thing so much as it is an access thing.

Since these self appointed radio/computer gods have declared knowledge
an
illegal thing also, I might just make the entire Secret CB book series
available on CD along with a CD of amplifier schematics for base and
mobil
amps. Why is it that when these morons just think they are getting
somewhere
in their fight somebody like me comes along and pisses on their
parade?
BECAUSE THEY NEED IT AND DESERVE IT!!!!!!!!!

E-Mail me with your needs......

Marx was REQUIRED reading when and where I went to school although it was shown as an example of how NOT to think. Utopian idealists have been around since the dawn of time and the Marx manifesto is just another incarnation of the same old crap hashed out again with a new cover. While Marxism would show more promise to succeed where it's bastardized child communism failed, it too would serve little more than a way for the very few to control the very many.

There is plenty to drag Twisted through the hot coals over Tim. The "jock strap" and "saucer men" post just servers as a reminder that when he forgets to take his med's, and attemps to use the keyboard, hard-drives don't forget.

The one below is a nice one, which points out your total lack of respect for your fellow CBers. I think it speaks volumes about why you do the illegal power thing etc. Or I can bring up the issue of you bootlegging on the Ham Bands again.

There's TONS of Twistedhededness in the archives, Tim. Here's a couple
of my favorites:

Everyone knows amps on 11 meters are illegal. So what? So we have the
holier-than-thou schmoes out there trying to convince us that we ought
to change our ways. Look, I,ll make it real simple 4 u self appointed
cops and monitors or whatever the hell u refer to yourselves as. We
know
the risks, if we take the chance, most of us are ready to deal with
the
consequences should the heat come down. I have respect for MOST hams,
but I achieve the same results at a fraction of the cost. If I bleed a
neighbor, all they have to do is knock on my door. We will work it
out.
I have been in the same area for quite some years and have no
problems.
If I am not hurting anyone, why the hell should you care WHAT I do?
The
bottom line is you shouldn't. Get a life. You guys that bitch about us
freebanders and "peaked" radios have way too much time on your hands.
I
don't need to run anymore than 30 watts where I am located and I talk
all over the world......yes.. on the freeband. Nothng pleases me more
than one of you cb rambos to come in to my conversation and start
preaching about rules. God, I love to squash you suckers.

Gettin' WAY-UP from the sandpile

Many of us live for long distance DX. IF you have a problem with his mode of operating, tell me what frequency and time you will be on. If this poor kid can get you riled by asking to talk skip(GASP!) I can't wait till you hear me. Pick on someone your own size. I'm ready to key all over your whiny, sniveling ass!

Gettin' WAY-UP from the 'pile

Hey Satan,

I need you to take out the trash and make lunch for the kids.
Then you can fix the blocked up toilet.

> nothing but a big JOKE.

Perfect example of freedom of speech in action. Let's find out mr. doorslammer's vision for the citizens band:

> you guys get on here and are not even down with the trill.sayin this
> and that,it wouldnt suprise me if all these post came from no more
> then 10 bored ass mud-ducks who get on here cause this is the only
> place they can be heard or get a reply.

What's the "trill"? And why do we need to be down with it? What's a "mud duck"? Is that a legal 4 watt station? Do you have a problem with "mud ducks"? Why?

> some of you people (radio junkies,immature hams)should be ashamed of
> your-self getting on here trying to make the people that are there
> life more difficult or just slappin your gums talkin shit.

How does this differ from what keyclowns do on the citizens band?

> my point is DONT TALK ABOUT BE ABOUT IT.all this talk dont mean a damn
> thing,i could give less then a damn about what people want,what you
> want is not what you have!!!and not always what you get.

I thought the purpose of the citizens band was to communicate, i.e. talk. Ditto for UseNet, it's "talk". So which people do you want to stop talking? Just the people you don't agree with? That would make things awfully one-sided, don't you think?

> if you have noticed none of the big boys are out here poppin
> shit.why?they got better things to do then show there ass or how much
> they know.

"Big boys"?

> and to all the voobie punks out there,just let it go,you guys will
> never have any control over the sales of illegal equipment,and
> probably dont have nuts to confront anyone that looks like they could
> kick your ass.

As a citizen I have a right to complain when laws are being broken. The local cops and the FCC do all the confronting. (Good luck "kicking their ass")

> All you guys do is run your mouth,are you guys gonna get
> on ch19 and try to take all of the illegal radios and amps those
> drivers have,i didnt think so,actually come to think about those akc
> guys could be truckdrivers just aggitating people they know run base
> stations or talk skip.

(see above)

> anyways while you guys set around and talk about all the shit you dont
> have,ill be gettin money,slammin cadilac doors,choppin blades and
> maybe even puttin some real dick in your wife life,and i got down.
>
> bye i yi yi yi

Is this some kind of gangsta rap/hip hop language? Could someone
please translate? Not sure, but it sounds like his vision for the
citizens band is that we should all emulate cheap, inner-city pimps.

4313. For Sale 2950DX in mint condition!

Newsgroup: rec.radio.cb
Date: 2002-05-14 19:29:16 UTC
From: Keith Santo <keith@tnmail.com>
Message-ID: <gAdE8.3236$8M5.2069@nwrddc01.gnilink.net>
Source record: 124178

I have for sale a mint condition Ranger 2950DX, new in the box. This radio
was used in my car for a couple of months but removed daily. It will operate
from 26 to 32 Mhz all modes (SSB, CW, AM, FM). Comes with box,
manual, U/D Mic, mobile mounting bracket and all hardware. I just bought a
new Yaesu FT100D and don't need this radio. Looking for a good home for it!
Want $220 plus $15 shipping. Will ship only to the US!
This little radio works great and will not be DOA. I made contacts all over
the US on the 10m band also Japan.
Contact me at keith@tnmail.com or call 425-442-1011
I am good in the callbook site www.qrz.com.

May God Bless!

Rob, you're just a keyclown with a ham license. Why are you trying to
encourage CB'ers to use amps illegally?

hi arun, UGK aka undergroundkingz happens to live about 45 minutes from me here
in texas. there the ones who coined the phrase "Trill ass n**ga" true enough
but there is no such thing as 20 inch blades. the biggest they were ever made
in was 19's, those are the same rims i'm sitting in front of on my website.
there no longer made so a fresh set is worth at keast a 3cx5k box these days.

It's not "new" anymore. It is "used" Also, that radio will not
cover 26 to 32 without being opened and jumpers moved.

However, it may very well be in "very good" to "mint" condition.

Since you, like Toll, are too lazy to read the book and would rather whine and complain, I'll let you off the hook just to make you shut up: Since there is really no accurate way to measure PEP at the output (not even with a Bird), the power for SSB is usually calculated from the voltage and current peaks on the INPUT to the final. This is a standard definition found in many books, not just Kellejian's.

Not only that, but PEP is NOT an "equivalent average dissipation value, but only an equivalent instantaneous 'talk-power' value," as stated in the referenced page. It also notes that PEP = 4 * RMS, which is absolutely true, since PEP is intended to measure only a carrier-free modulation envelope, not AM. Here's the full equation (and I have posted it before):

PEP = Vp-p * Ip-p = 2[1.414^2(Vrms * Irms)] = 4Prms

You could have figured out that it was for input power if you had messed with the equation a bit longer, or you could have just read the book. But your confusion lies with the fact that there is more than one definition of PEP. The FCC usually defines PEP as RMS per bump. The RMS definition is not quite the same (and not nearly as accurate) as the p-p definition, but it does establish a standard with which appliance operators can measure power on SSB -- the wattmeter. You should also notice that when PEP is used it is also defined.

Above all else you still missed the point, which was the ignorance behind the use of the non-standard measure of power commonly referred to as the Bird-watt. Ironically, you provided additional reinforcement to my claim that these proponents of power don't really know what they are doing, and don't really care as long as that needle jiggles back and forth.

Now, is there something else you want to whine about because you are too lazy to look it up yourself?

You still won't answer the question.....Nothing new. So i'll
ask again.....How can your formula get 400 watts PEP from
a 100 watt carrier modulated to 100%?

I answered the question. You are still ignoring the issue: PEP isn't
used to measure a carrier!

So, does this mean that the 2KW 460Mhz amp I am building is a bad idea?
(BTW, strictly class C so that Sparky and Dick don't get upset with me)

Man, just when I was gettin ready to fire that puppy up and talk what....maybe 20 miles or so with my loaded, electrical length don't mean shit, half wave dipole! Just my luck!

> Beyond that, I have run out of arguments, at least for now.

As has been explained to you before - you have your terms confused.
What you have described above are the physical wavelengths of the
antennas - not the electrical wavelengths.

I can wind a coil and place a 1" stinger on top that is an electrical
1/4 wavelength at a given frequency (e.g. it is resonant). By tapping
the coil properly, I can also match the impedance to my transmission
line.

I am sure that you would agree that this antenna will NOT have the far
field radiation pattern as a full sized 1/4 wavelength antenna. And
it's electrical length is 1/4 wavelength, where it's physical length
may be 1/64th wavelength or even less.

> that you can not change the electrical length by adding loading coils or
> capacitors. That's a simple, straightforward statement and I stand by
> it. If you think it is incorrect, please explain if you can.

We have tried to explain it. What you have stated above is contrary to EVERY text on antenna theory - from the basics provided in the Radio Amateur's Handbook through the advanced theory provided in Electrical Engineering.

Adding loading coils/capacitors will always change the electrical length. They also may, or may not, change the physical length.

How can it be otherwise. Add a coil or capacitor to an antenna, and the resonant frequency changes. That means that the electrical length has changed, regardless of whether the physical length (which can be measured with a ruler) has changed.

If only the electrical length has changed - then the far field pattern does not change.

When we design antennas, we choose a physical length that will provide the radiation pattern characteristics that we desire. This is an approximate length - the radiation pattern only changes slightly with small changes in physical length. We then do whatever is necessary to obtain an electrical length that will make the antenna resonant at the chosen frequency. This will generally change the physical length as well - but that does not matter as long as the physical change is small. If the physical length change is too great - then the starting length was wrong - so we scrap it and start over with a different physical length.

The only problem is - stay in the "linear" region of a Class C amp and
you will not get anywhere close to 100% modulation. You would be lucky
if you managed 50% without serious distortion and harmonics.

You are not answering, just avoiding. Of course PEP isn't used to measure a carrier, but it can.be, and when it is used its numerical value is correct. A carriers PEP value is the same numerical value as the carriers average wattage value.

Your formula would never show that sameness. Why? Because your formula is the incorrect formula for calculating the Peak envelope Power of a transmitter.

You did? Where?

Here's the question again.............

How can your formula (PEP = Vp-p * Ip-p) get 400 watts PEP from
a 100 watt carrier modulated to 100%?

Show us the numbers !!!!!

My bet is you won't. Why? Because it will show us all,
to your embarrassment, that you are wrong and nothing
more than technically mediocre. You feel that your mediocracy
must be hidden, so you compensate by lies, tangents, and
avoidance. Prove me wrong. Show us the numbers !!!!!

Yes George, we had a gentleman's agreement, but if
you so desire to break it, well then I guess you want to
continue on this little charade. I ask that you stop this as
per our agreement, please don't say that he has his own mind,
we all know better.

I agree with Sparky a good part of the time but not always. He, for example, deals with Randy but I feed him to Bozo*Flush. He suffers idiocy, bozodom and stupidity more and better than I do. He gets involved in flyspecks in the pepper which I try to stay clear of.

Sparky is his own man as am I so I make no more out of an agreement than the fact we agree. Small minds discuss people, average minds discuss events, brilliant minds discuss ideas, twisted minds get involved with radio.

And the post below pretty well shows Randy is a pinhead.

Dick N�BK

Landshark, You are going to make me say a few things that I am sure you don't want to hear and you know what you will deserve everything I say, I told you I am not Aaron, I do not tell him what to post and when to post it, I am sorry If this blows your whole theory. Like I said I don't expect you to live up to any agreements either way. You have speculated that I am Aaron your proof is he has Aol and "I think George does to" Well sorry to say you are as wrong as the day is long. The only charade being played is by you accusing me of being Aaron. Do me a favor either find some better evidence like a Ip address or stop the bullshit, no less than 5 people have been blamed for being Aaron. Hell I keep telling you my name is not even george but you don't want to believe that either. Your on your own.

4349. Re: 1/4 wave antenna gian??????

Newsgroup: rec.radio.cb
Date: 2002-05-15 02:24:23 UTC
From: Roy Lewallen <w7el@eznec.com>
Message-ID: <3CE1C6D7.A13D4FEE@eznec.com>
Source record: 124214
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.dx,rec.radio.cb,rec.radio.shortwave,uk.radio.amateur

I'm uncomfortable with "electrical" and "physical" length, because each represents only a single number. A simple linear antenna has not one, but two important properties: length and current distribution. For a given physical length, or a given resonant frequency (which seems to be being related to "electrical length"), you can have an infinite number of possible current distributions by placing impedances along the wire. For example, a bottom loaded shortened vertical has a different current distribution and hence a different pattern than a center loaded shortened vertical of the same length and same resonant frequency.

In practice, for short antennas, you don't modify the pattern much by changing the current distribution. A classic example is a half wave dipole, which has a sinusoidal current distribution, and a very short dipole, which has a nearly linear current distribution. (It's actually just a small piece of a sinusoid shape.) The radiation pattern of the infinitesimally short dipole looks almost the same as the pattern of a half wave dipole. (Try this with EZNEC to see for yourself.) If you could make the short dipole lossless, you'd find that the gain isn't quite a half dB less than the half wave dipole -- and that's because the lobes are slightly fatter due to the different current distribution. Of course you can't make a lossless very short dipole -- but you can make one that's pretty short with a loss that's acceptably low for most purposes.

So there's more to a linear antenna than "physical length" and "electrical length". You have to consider the current distribution if you want to predict the pattern.

Yes it is that simple. You can add a coil to an antenna element whose
electrical length is much longer than its physical length. Then that
element will resonate at a much lower frequency than the total physical
length of the element and coil.

26 to 32 Mhz? It's a violation of FCC regulations to import or market
a transmitter designed or intended to operate outside the amateur
bands unless the equipment has been issued a grant of equipment
authorization for the radio services it's capable of operating. The
FCC noted that it's illegal to import, market or operate a transmitter
that requires a grant of equipment authorization but for which no
grant has been issued.

Just to remind everyone...

FCC rule 2.815(b): After APR 27, 1978, no person shall manufacture,
sell or lease, offer for sale or lease (including advertising for sale
or lease), or import, ship, or distribute for the purpose of selling
or leasing or offering for sale or lease, any external radio frequency
amplifier or amplifier kit capable of operation on any frequency or
frequencies between 24 and 35 MHz.

You haven't provided the needed parameters for the equation. Here's a proper example:

Without modulation the input to a final is measured at 200 volts @ 1 amp. At a modulation peak, the voltage drops to 150 volts @ 5 amps. Vp-p = 50 volts and Ip-p = 4 amps, therefore PEP is 200 watts and Prms is 50 watts. Pretty simple, huh? Now can you see why PEP isn't used to measure the power of a signal with a carrier? Probably not. Ok, here's another example:

An AM final with no modulation draws 1 amp @ 50 volts. There is no peak voltage or current to measure, so Vp-p is 0 volts and Ip-p is 0 amps. That equals zero watts. Why? Because....

....PEP ISN'T USED TO MEASURE AM POWER!!!!!

>
>....PEP ISN'T USED TO MEASURE AM POWER!!!!!
Not normally but it can be.

Your formula : PEP = Vp-p * Ip-p

Vp-p = voltage peak to peak , a peak to peak voltage is always
2.828 times the rms voltage
I p-p = current peak to peak , a peak to peak current is always
2.828 times the rms current

V * I = P
2.828 V * 2.828 I = 8 P

Any usage of Vp-p * Ip-p instead of Vrms * Irms will give a result
8 times different than the original

****
All the rest of your dribble about the final input measurements is
just a ploy to skirt the issue. In reality a 100 watt carrier
modulated to 100% in a 50 ohm load has a Vp-p of 400 and a Ip-p of 8
amps. Of course you would never admit that. Instead you cloud the
issue with "measured at the final" dribble.

I didn't say that. It sounds like the attitude you project!

> > Just a hambo
> > wannabe with no life.
>
> And you dislike hams because....?

I don't. I dislike hambo wannabes - like YOU. At least I have a
license; YOU don't. So your point in spamming the 'group is..?

> > enlightenment, although it would be a total waste of time.
>
> You get your guidance from Dave, huh? Figures.

That isn't what I said, is it? I certainly don't get guidance from
you, Mr Poofter. Nothing but the same tired rhetoric; a one trick pony
that's full of equine excrement.

Hi Dave,

Sorry to have not gotten back sooner. I don't want you to think I was
"snubbing" your comments or anything like that. :-)

Considering that many of the "high-end" CBs were priced in the $500.00
(Cobra 2000GTL/President MAdison) to $800.00 (ARF 2001/CPI-400 series)
range and they still sold reasonably well in the late 60's to mid
70's, I truly believe that it would not be as much of a hindrance as
theorized here on the NG. That's not to say that this did not play a
major role in the FCC's reasoning, I just think the reasoning was
poor. After all, the commission DOES make mistakes, does it not? The
manufacturers would have found the solution to answer the market
demand. That is already painfully obvious now wrt illegal CB sales. A

hundred bucks get's you on 26 - 28 MHz AM/FM/SSB/CW in the form of the
Superstar 3900...on sale for $99.99 a few mos. ago and currently
$119.99. In the early/mid eighties, you couldn't touch an all-mode
"export" rig for under three bills. FRS would have been nice in
say...1964?

> factor" of the FCC also kept most CB users in line.

I'll stick to my original assertion that it was just kept more
discrete back then. I do, however, agree wholeheartedly wrt the "fear
factor." I would love to see the return of licensing and rigorous
enforcement to the CB. Some feel that my pro-DX stance wrt CB somehow
means that I want to "open the floodgates" for the relaxation of other
rules. Nothing could be further from the truth. I've even suggested a
written code test to comply with the current ITU treaty requirements
along with the return of licensing. One could conceivably pass such a
test and receive a "DX endorsement" to their license? This idea was
presented as a response to a post and "politely" ignored. I suppose it
made too much sense.

Although no excuse, many have overlooked the FCC's AWOL status wrt CB
enforcement. This actually bothers me more as a tax-payer than as a
radio enthusiast. Lemme stop there.

> > "Bad citizens" who succumbed to their natural curiosity wrt those strange far

> discovering the peak of cycle 21 and the ability to make long distance
> contacts.

Without a doubt. You know what I found rather interesting? Going
through some of the older articles and seeing the amount of technical
content. Then the realization that this "evolution" into a
pseudo-hobby band had taken place much earlier than I'd previously
thought. The internet just poured gasoline on the embers and the
"quiet" explosion was on.

> > Hopefully, this issue shall be
> > revisited post-2003, if the Morse requirement is actually dropped.
>
> In the FCC's eyes, there is already a service dedicated to hobbyists,
> and that's Amateur radio. The FCC may turn a blind eye to what goes on
> on CB, but it's doubtful that they will endorse it any time soon.

I agree. I just feel that if you believe in something, then stand up
for it. (Whether it comes to fruition or not.) 11-meters has ALWAYS
been good to me. I've been rather fortunate and I DO understand that I
and others like me may very well be the exceptions, but these are the
experiences I base my actions upon. Without CB, I might've not made it
to amateur radio. (Dunno?) I do know that I'm nobody's lid or keyclown
and there are still plenty of folks like me still on the air. "If you
don't stand for something, then you stand for nothing." If it never
happen, I surely won't lose any sleep...but it will not have been for
lack of effort.

> >
> > Conversely, there were ALWAYS those (Whether hams, self-appointed radio cops,
> > or both.) that frowned at this, declaring that "there can be ONLY one form of
> > "hobby" radio!" HORSEFEATHERS!
>
> That's certainly one opinion, and one that can be supported by
> testimony.

Yeah, but the hard part is getting them to realize their political and
market-share capability. CBer's still outnumber ARO's by a staggering
ratio, even long after the so-called "craze" supposedly died out. Yet
they (WE!) are still incapable of all pulling on the same side of the
rope. That's the real shame. I'd be willing to wager a lobster dinner
that if 70% of all active 11-meter enthusiast were to ask their
elected representatives to ask the FCC about the outcome of RM-9807,
there'd be a different outcome wrt the appeal. (Or whatever it was
called.) We'd probably see a different "attitude" about a "parallel"
hobby band. I can just hear it now, "well, I don't think a 440 KHz
slice of HF spectrum at only 12 watts P.E.P. quite connstitutes a
service parrallel to amateur radio." (No $hit Sherlock!)

> > 11-meters has evolved into pseudo-hobby radio

>>....PEP ISN'T USED TO MEASURE AM POWER!!!!!
>Not normally but it can be.

No, it can't. You don't have an envelope with an unmodulated carrier,
and PEP without an envelope to measure is zero watts. You are
demonstrating your ignorance every time you beg me for the PEP of a
100 watt carrier!

>Your formula : PEP = Vp-p * Ip-p
>
>Vp-p = voltage peak to peak , a peak to peak voltage is always
>2.828 times the rms voltage

Wrong. It's 2.828 * RMS only for a sine wave.

>I p-p = current peak to peak , a peak to peak current is always
>2.828 times the rms current

Wrong again for the same reason.

>V * I = P
>2.828 V * 2.828 I = 8 P
>
>Any usage of Vp-p * Ip-p instead of Vrms * Irms will give a result
>8 times different than the original

Did you notice the other part of the equation where it uses
2[1.414^2(Vrms * Irms)] instead of [2(1.414 * Vrms)][2(1.414 * Irms)]?

Did you ever stop to think why that is? Or were you just saving it for a later opportunity to gripe?

You know what? I'm tired of spoon-feeding everything to you. I'm not even going to give you the reason for the discrepancy, either you read the book from which the equation was quoted or figure it out for yourself. Quit whining and start thinking!

>**********
>All the rest of your dribble about the final input measurements is
>just a ploy to skirt the issue. In reality a 100 watt carrier
>modulated to 100% in a 50 ohm load has a Vp-p of 400 and a Ip-p of 8
>amps. Of course you would never admit that. Instead you cloud the
>issue with "measured at the final" dribble.

On the contrary, I have no problem with the figures you quote. I am skirting nothing, it is -you- that is skirting the issue of technical illiteracy, and for good reason.

About the only thing I can hear down in that area is buzzing from harmonics of 60hz lights and appliances, and a bunch of other static. Of course, I have nowhere near a properly tuned antenna, only an open longwire.

Everyone knows amps on 11 meters are illegal. So what? So we have the
holier-than-thou schmoes out there trying to convince us that we ought
to change our ways. Look, I,ll make it real simple 4 u self appointed
cops and monitors or whatever the hell u refer to yourselves as. We know
the risks, if we take the chance, most of us are ready to deal with the
consequences should the heat come down. I have respect for MOST hams,
but I achieve the same results at a fraction of the cost. If I bleed a
neighbor, all they have to do is knock on my door. We will work it out.
I have been in the same area for quite some years and have no problems.
If I am not hurting anyone, why the hell should you care WHAT I do? The
bottom line is you shouldn't. Get a life. You guys that bitch about us
freebanders and "peaked" radios have way too much time on your hands. I
don't need to run anymore than 30 watts where I am located and I talk
all over the world......yes.. on the freeband. Nothng pleases me more
than one of you cb rambos to come in to my conversation and start
preaching about rules. God, I love to squash you suckers.
                                        Gettin'
WAY-UP from the sandpile

Many of us live for long distance DX. IF you have a problem with his
mode of operating, tell me what frequency and time you will be on. If
this poor kid can get you riled by asking to talk skip(GASP!) I can't
wait till you hear me. Pick on someone your own size. I'm ready to key
all over your whiny, sniveling ass!
                          Gettin'
WAY-UP from the 'pile<<

Hello, Aaron#2. I must admit, I usually ignore you because you are completey full of troll value,flame material and little else.
However, your attempt at getting the heat off Lelnad's problems and redirecting the topic to one of me has an affirmative nod from me this time. Why? Simple. You are now teaching Lelnad what the rest of the group has taught him for years..... how to disagree or take issue with someone or something for a legitimate reason, not a self-created one.
For the first time ever in this newsgroup's history, one of you malcontents put forth in the body of your posts a genuine post by me that you finally have a real issue with.
Not managing to do any damage with a year of forges, you finally set your sites on some truth. Good show. The above posts by me pissed you off apparently,,thats fine..give it to me with both barrels,,I stand behind what I write...let's hear your problem with the above....IF you have learned how to communicate properly.
Yes, there exists tons of "Twistedhedness", everything quoted has been forges.
Lelnad
when even AA#2 can surpass his intellect
I guess I ought to extend some sort of "thanks" to you since the reeal posts indicate just exactly the type power I run. Kinda shoots your "kilowatt Charlie" theory all to hell about me.
Now you can cry all about my position on freeband or willingness to key on you channelmasters and self-appointed radio cops.. Nevertheless, it;;s nice to see you leaving the reducing of one's self strictly to one Lelnad C. Scott, licensed amateur KC8LDO..and always remember, one can break FCC rules much easier than one like you ever will be able to enforce them. The mere act of freebanding presents no danger from prosecution as long as the power is kept at a minimum and one is not straying into hammie bands. The bands directly above and below the cb bands are usually perfect for DX, quiet channels, and bothering no one.

Most times meters are simply 0-1 ma meters of varying quality with neat new faceplates so your real problem is cosmetic and getting them apart. Were I looking, I might try Gateway in St. Louis or Surplus Sales in OMA, either would be pleased to rip you off. Doubt the originals are available.

I have built several items where the meter read something like 'Gallons per Hour'; lends a proper air of surrealism.

Ever listen to 14.313 mHz? How about 3850? Talk about keyclowns! If
you held a license, I'd suggest strongly that you go clean up your own
backyard. But you don't have a license, do you. Wannabee! (aside:
Licenses are NOT that hard to get, Aaron. Why don't you have one?)

> > But how about your
> > spam?
>
> Spam? Since when are opinions Spam? When you don't agree with them?
> LOL.

Unnecessary and repeated posting of your (or any other) drivel does
constitute spam. But at least you have admitted that it's only your
"opinion". When you can accept the fact that your opinion means as
much as anyone else's opinion, you will have reached a level of
intelligence nobody thinks you're capable of. I don't think it will
ever happen, but it's a start.

> > YOU are insignificant except in your own mind.
>
> Explain to me why a guy named "Richard Cranium" thinks his opinions
> are significant and other peoples are not.

You makin' fun of my name? YOU, of all people Boobner?

> > Just a hambo
> > wannabe with no life.
>
> And you dislike hams because....?

I dislike anyone (including hambo wannabees like YOU) who do nothing but stir up problems. When (if) you ever go to take your ham license exam I don't think they'll grade you any easier because of what you are doing here. Even licensed amateurs don't try to keep the "hams vs. CBers" rift going - but YOU do. They know that both are viable hobbies, and many of today's licensed hams began on CB, so you have no point.

And you have no reason to keep posting the "illegal" line since you aren't a licensed ham in the first place. So, who appointed you god? Come back when you can post your callsign.

> > Dave or Debby should pray for your

>
> You get your guidance from Dave, huh? Figures.

He/she/it makes about as much sense as you ever have! The point was that hoping (or praying) for your enlightenment would be a complete waste of time.

Get a life. Shut up. Go away.

Now that's total and utter bullshit! There are plenty of hams that
snub their noses at any CBer they happen to meet. There are even rifts
between hams, namely between the codes and no-codes. Rifts exist
because people are petty, whether they are hams, CBers, keyclowns, or
chicken chasers. If you haven't learned that by now then you should
probably get out and meet some real people instead of arguing with
trolls on a newsgroup!

> theorized here on the NG.

Those "high end CB's" that you refered to, weren't around in the 60's.
The RETAIL price of a new Cobra 2000 was $399, and if you were foolish
enough to pay that, then shame on you. The usual "discount" price was
somewhere in the upper $200's. Most AM mobile CB's can be had now for
under $100. Heck even "export" radios can be had for similar.

But closer ot the point, $150 in 1960 was a lot more than it is now,
when you consider inflation. $150 in the 60's would get you a CB that
didn't even have all 23 channels in it. There were many radio that
didn't have all the channels. The really fancy radios (like the Tram
Titans and Browning Eagles) were in the $600+ range, which was hard to
justify on a $5000 yearly salary. But despite the relatively high cost

of class "D" CB's in the early days, the cost of Class "A" (UHF) was even more. And even with the higher power (60 watts), the UHF radio's range was usually less than a 5 watt 27 Mhz CB.

> That's not to say that this did not play a
> major role in the FCC's reasoning, I just think the reasoning was
> poor.

Hindsight, afterall, is usually 20/20. I don't think any intelligent person would disagree with you now. But trying to understand the conditions, both technologically, and economically, as well as socially, when the class "D" band was created, helps you to realize the rationale for their decision.

> After all, the commission DOES make mistakes, does it not?

Absolutely. No arguement there. The FCC, afterall, is made up of humans. Humans are far from infallable

> The manufacturers would have found the solution to answer the market
> demand.

A demand that was (in 1960) not very high. A chicken and egg scenario. If you make something in sufficient quantity, due to high denamd, the price will usually go down. But the demand will not increase usually, until the price goes down. So it takes time.

> That is already painfully obvious now wrt illegal CB sales. A
> hundred bucks get's you on 26 - 28 MHz AM/FM/SSB/CW in the form of the
> Superstar 3900...on sale for $99.99 a few mos. ago and currently
> $119.99.

It doesn't cost much more, from a manufacter's standpoint, to make a SS 3900, then it does a Cobra 148, while the market for the SS is basically worldwide, which translates to a higher demand, so the price is comparibly lower (Which yet increases demand). From a consumer standpoint, why pay $129 for a "legal" Uniden Grant or Cobra 148, when that same $129 (or lower) can get you the superstar, with more features?

In the early/mid eighties, you couldn't touch an all-mode
> "export" rig for under three bills.

In the 80's, "Export" radios were in their infancy, and the world market was not yet firmly established, hence their initial cost was higher.

> FRS would have been nice in say...1964?

Except that in 1964, the radio would have been as big as a brick (and just as heavy), have only one or 2 channels (and no CTCSS), would likely eat batteries, and cost $300.

> discrete back then.

We're both right. There were less people who broke the rules, and those who did were definitely more discrete, mostly out of the very real (in those days) fear of being caught.

> I do, however, agree wholeheartedly wrt the "fear
> factor." I would love to see the return of licensing and rigorous
> enforcement to the CB.

So would I, but I doubt it will happen. I believe the FCC is at a loss to figure out what to do to begin to clean up the "mess" that's become the 11 meter CB band (and the bands surrounding it. Plus funding is always an issue, and the politicians are always focussed on results, and it would take a long time to put a dent in the illegal CB operators, which would be seen by some in congress as a waste of taxpayer dollars.

> Some feel that my pro-DX stance wrt CB somehow means that I want to "open the
> floodgates" for the relaxation of other rules.

Well, a dam break usually starts with the first crack, so it's understandable how people attempt to predict the progression of those proposed rule relaxations.

In the grand scheme of things, allowing a person to legally chit-chat with someone across the country, the same way they chit-chat with locals, will not change things much. The propagation will be there (or not) whether people are talking local or DX, we have no control over it. The sticking point is the ITU, and the regulations on HF DX and CW knowledge etc. If the ITU changes these, then there may be a glimmer of hope for your proposal.

> Nothing could be further from the truth. I've even suggested a
> written code test to comply with the current ITU treaty requirements
> along with the return of licensing. One could conceivably pass such a
> test and receive a "DX endorsement" to their license? This idea was
> presented as a response to a post and "politely" ignored. I suppose it
> made too much sense.

Except that it would require the FCC to become administrators again. Something that will cost them money for something that gives (In their eyes) little in return. Make the cost of the license high enough to support the admin costs and a little more for the enforcement arm, and

people will just ignore the license and run illegally, like they did in
the late 70's (Which is what precipitated the FCC eliminating licensing
in the first place).

> Although no excuse, many have overlooked the FCC's AWOL status wrt CB
> enforcement. This actually bothers me more as a tax-payer than as a
> radio enthusiast. Lemme stop there.

They don't get any money in from CB, so they don't want to spend any
money on it. As long as the mess that's become CB, stays in the vicinity
of the CB band and does not interfere with people who have the FCC ear,
then little will be done.

> > > "Bad citizens" who succumbed to their natural curiosity wrt those strange far

> "quiet" explosion was on.

Sure. "discrete hobbyists" were around in the 60's, but they kept a very
low profile. By the 70's it was very much obvious. Once the "Convoy" fad
started, the band has never been the same.

> > > Hopefully, this issue shall be
> > > revisited post-2003, if the Morse requirement is actually dropped.

It might, but there would have to be some real incentive for this to
come about. The CB band, as a whole, suffers from a bad PR rep, which
makes doing anything even more difficult to justify. If the users of the
band had serious representation, in the form of organized clubs, or
groups, that carried the voice of the users, they might be strong enough
to lobby. But as it stands now, it's doubtful.

> > In the FCC's eyes, there is already a service dedicated to hobbyists,

You and I probably feel the same with respect for 11 meters. I may
sometimes allow my nostalgic view of CB past to skew my objectivity
toward the illegal misdeads of the operators of today, but I also feel
that the perceived value of something is directly proportional to what
you do to earn it. Since the CB band requires no tests, or licenses, and
there are no "keepers" to mind the store, the lowest common denominators
of society set the rules, and those of us with a bit more social
responsibility have little recourse, when it comes to setting up
legitimate rules, and then expecting these same societal lowlifes to
follow them.

> ratio, even long after the so-called "craze" supposedly died out.

All very true. Manufacturers like Uniden recognized the buying power of
the CB/Freeband market when they designed the HR 2510 "10 meter" radio,
which not-so-accidently had the CPU code to allow expansion to the CB
band. They then tried a half-baked effort to "discourage" illegal use of
the radio, by including a big warning paper in the box, and attempting
to block access to the CPU pins, which enable the out of band mods, with
nothing more than an easily removable RTV-like substance. All to attempt
to appease the FCC, while still hoping that it wouldn't deter sales of
the radio, to their real market.
Yaesu did almost the same thing when they introduced the FT-101 series
radios in the middle 70's.
It's not unusual for companies to bend the rules, when trying to tap a
certain market potential. I'm sure both Yaesu and Uniden (and others)
have profited hansomely from sales to the Freeband market, and I'm sure
the CEO's of those companies had no trouble sleeping at night even
though what they did was technically illegal.

> Yet they (WE!) are still incapable of all pulling on the same side of the
> rope. That's the real shame.

That's because CB was, and still looks to be, a free-for-all. There can
be no cohesiveness when anarchy rules.

> I'd be willing to wager a lobster dinner
> that if 70% of all active 11-meter enthusiast were to ask their

> there'd be a different outcome wrt the appeal. (Or whatever it was
> called.) We'd probably see a different "attitude" about a "parallel"
> hobby band.

If those same 70% of radio enthusiests became as passionate about
reining in the "lunatic fringe" operators, and showed some
responsibility toward responsible operating, then they would earn the
respect of the FCC and the likelihood of these rule changes would be
much greater.

> I can just hear it now, "well, I don't think a 440 KHz
> slice of HF spectrum at only 12 watts P.E.P. quite connstitutes a
> service parrallel to amateur radio." (No $hit Sherlock!)

In a way, it's a bit of a paradox. The more the CB band cleans up its
act, the more it becomes like ham radio, and the less justification the
operators have for keeping the services separate, even if they serve a
similar function. The more the CB band remains in a state of anarchy,
the less it looks like ham radio, but the less likely that any
legislators will take them seriously.

>
> If you disagree with a law, try to change it...don't break it.

Exactly! But there are those among us that believe that until it is
changed, just ignore it anyway. The fact that they perceive the law as
bogus is still not a valid justification for breaking it. But that is
the mentality that is rampant among the illegal 11 meter crowd.

When you factor in all of the issues of the time, and remove the
advantage we have of hindsight, it's easy to understand why the
"boo-boo" was made. And you're right, it is interesting conversation.

Dave

That's exactly right, Aaron. The key is realizing that USENET is
merely a "recreational" interface, hence REC.radio.cb. Nothing more,
nothing less...no great policy changes are being effected here. There
are those, however, that might be experiencing delusions of grandeur
and believe that they are somehow actually "accomplishing" something
(of benefit) in the real world. Sadly, (And I emphasize, SADLY.) they

are not.

>Aren't the PEP formulas assuming a steady state sinusoid
>waveform as in a non-distorted 100% AM modulated waveform?

No. The reason is that an SSB signal is basically an audio signal
riding on RF. The RF may be sinusoidal (or nearly so), so the RF can
be measured with a simple RMS meter. But the audio power in the signal
cannot be measured as RMS because audio is rarely a sine wave. And
since both the meters and the human eye are not capable of
distinguishing between audio and RF power, the audio power becomes a
player when measuring a modulated SSB signal.

>Or, even a steady, single tone, non-distorted SSB sinusoid?

Single and dual tone tests can be used for many things. Basically, a
single tone SSB signal is nothing more than a constant carrier, and
you can measure the audio power of a single tone by measuring the RF
power as RMS. But as soon as you start mixing up the audio you lose
that sinusoidal pattern, and RMS means nothing.

Just for the sake of mentioning it, you already know that the
effective, or RMS power for a sine wave is 0.707 of peak. But for a
sqare wave the effective power is more like 1.0, and a sawtooth is
closer to 0.5. Speech can have an effective value of only 0.2 of the
peak value. And, of course, RMS is equal to peak when measuring DC.

>It seems to me that unless you maintain a steady state
>modulation, such as a tone, it is nearly impossible to
>measure the PEP accurately using a formula. In other words,
>speech is a sufficiently different waveform than what the
>formulas assume so how can the PEP be measured under these

The formulas assume nothing. The values are measured and the rest gets
read from the beadwork on the abacus.

>I'm not saying the PEP cannot be measured under these
>conditions but some type of qualifier or designation would
>need to be used in describing the test conditions as non
>single tone power.

Any test should be referenced with the conditions of the test. That's
really part of the basics of any kind of technical or scientific work.

>I guess a fast scope with a capture ability or a lab
>wattmeter meant for fast pulse power would provide a truer
>indication of the instantaneous PEP during modulated
>conditions.

Peak-reading meters have been around a very long time. The high grid
impedance of the vacuum tube makes them almost ideal for holding a
peak and measuring it.

>Lastly, it seems to me that all the PEP reading meters
>commonly used out there are calibrated in terms of the
>formulas which assume certain things about the waveform. I
>hardly see anyone providing one of these assumed waveforms
>to their meters or at least denoting that this PEP reading
>was the result of a single tone test.

You are absolutely correct. Almost all so-called "PEP wattmeters"
assume a single-tone, sinusoidal modulation -- even Birds. But when
the modulation isn't a single tone, all bets are off.

Dave, the real problem is the antenna. If you read the proposal, they are looking to limit hams to 200 watts, but NOT TO EXCEED 2 watts eirp. Yep, the best antennas have a 'gain' of about MINUS 20 dB! From what I've read in the past, you have to have real good equipment under the existing rules to make it out to 100 miles! Of course, this was before digital modes existed that could copy signals buried almost 30 dB below the noise. CW can be copied about 6 dB below the noise. Of course, one we can get radiated power up from 10 milliwatts to the 1 or 2 watt level, yes, expect some distance out of it. Now I'm waiting for our friend N0 Big Kahuna, to show up with a full quarter wave unloaded whip on a volkswagon ...

I'm an industrial rock solo artist and I have a band for live shows, my music is very melodic and synth oriented. I was influenced strongly by NIN, KMFDM, Misfits, The Doors, Ministry, NOFX, Depeche Mode, Prick, Alice In Chains, The Beatles, Nirvana, Soundgarden, Ozzy/Black Sabbath, Chemlab, Front Line Assembly, Pitchshifter, Sepultura, Tool, Orgy, Old Metallica and a ton of other great bands, mostly underground. I think you guys would really enjoy my music and I
would like to hear your reactions. My project is called Mutagen check it out at www.mutagen.com or http://artists.mp3s.com/artists/53/mutagen.html this is a brand new song and there will be more songs up very soon (about 6 - 8), the other songs have more keyboards that this one so keep checking back at the site. If I were to describe it I would say it was Industrial Rock that's very melodic, with a little bit of an 80s feeling at times (mostly in this song). Thanks

Nathan

Ok ...Time for me to show my ignorance.

It's my understanding that PEP can be used to designate power in a "carrier only" situation but it's hardly usefull in that regard.

In the absence of a modulating waveform you still have the carrier's sinusoid waveform to measure.

Aren't the PEP formulas assuming a steady state sinusoid waveform as in a non-distorted 100% AM modulated waveform? Or, even a steady, single tone, non-distorted SSB sinusoid?

It seems to me that unless you maintain a steady state modulation, such as a tone, it is nearly impossible to measure the PEP accurately using a formula. In other words, speech is a sufficiently different waveform than what the formulas assume so how can the PEP be measured under these conditions?

I'm not saying the PEP cannot be measured under these conditions but some type of qualifier or designation would need to be used in describing the test conditions as non single tone power.

I guess a fast scope with a capture ability or a lab wattmeter meant for fast pulse power would provide a truer indication of the instantaneous PEP during modulated conditions.

Lastly, it seems to me that all the PEP reading meters commonly used out there are calibrated in terms of the formulas which assume certain things about the waveform. I hardly see anyone providing one of these assumed waveforms to their meters or at least denoting that this PEP reading was the result of a single tone test.

I doubt it. Give Ozzy back to George Bush, and WHAT kind of Ministry did "Ministry" have? What is "industrial" rock? Is that "Corporate" rock? Did you KNOW that "rock" is the music of communism? (Springsteen)! Make a song about this NG and you will be better off!
Dave!!!!!!!!!!!!!!!!!!!!!!!!

snip
>>>....PEP ISN'T USED TO MEASURE AM POWER!!!!!

>>Not normally but it can be.

>No, it can't. You don't have an envelope with an unmodulated carrier,
>and PEP without an envelope to measure is zero watts. You are
>demonstrating your ignorance every time you beg me for the PEP of a
>100 watt carrier!

Wrong. You can modulate a carrier at 100%, 10% or .000001% and still
take a PEP reading.

>>Your formula : PEP = Vp-p * Ip-p
>>
>>Vp-p = voltage peak to peak , a peak to peak voltage is always
>>2.828 times the rms voltage
>
>Wrong. It's 2.828 * RMS only for a sine wave.

We are talking sine waves..........duh

>>I p-p = current peak to peak , a peak to peak current is always
>>2.828 times the rms current
>
>Wrong again for the same reason.

No, we're talking flag waves.

>>V * I = P
>>2.828 V * 2.828 I = 8 P
>>
>>Any usage of Vp-p * Ip-p instead of Vrms * Irms will give a result
>>8 times different than the original
>
>Did you notice the other part of the equation where it uses
>2[1.414^2(Vrms * Irms)] instead of [2(1.414 * Vrms)][2(1.414 * Irms)]?
>Did you ever stop to think why that is? Or were you just saving it for
>a later opportunity to gripe?

Don't have to notice it. You yourself wrote: "PEP = Vp-p * Ip-p =
2[1.414^2(Vrms * Irms)] = 4Prms" Notice all the equal signs between
the three parts that you wrote?

I chose the first part because as far as you are concerned it is equal
to the other parts. I also chose the first because it is consistent
with my statement that "PEP = Vp-p * Ip-p does not give you the Peak

Envelope Power of a radio transmitter"

>You know what? I'm tired of spoon-feeding everything to you. I'm not
>even going to give you the reason for the discrepancy, either you read
>the book from which the equation was quoted or figure it out for
>yourself. Quit whining and start thinking!

I have proven my point.....Goodbye

P.S. for all who already don't know the PEP formula. Don't use this
one: PEP = Vp-p * Ip-p .....that is unless you want your stock
4 watt radio to kick out 128 watts PEP upon 100% modulation.

Rather use this one: PEP = Vrms * Irms..... measurements taken at
the crest of the modulation envelope.

Good God, Landwhale! Would you rather talk about CB radio or whine
about George's posting habits? Quit obsessing and get a life!

4408. New to the game

Newsgroup: rec.radio.cb
Date: 2002-05-15 20:57:38 UTC
From: Serial # 19781010 <trevor@razormedia.com>
Message-ID: <9fi5eucfmg1lv7ntinj1l9flr2eu49bjvv@4ax.com>
Source record: 124275

I'm very new to the game. Only had 1 fun CB experience in the past, due to a trusted old friend Reg. H from Sudbury, now have decided to take up the hobby.

I don't have any gear in my hands yet, but have purchased stuff on ebay so hopefully I will be getting moving on this soon.

Is there anything I need to know before getting started? I am doing this from an apartment building. Anything else I need to buy. What type of wire should I get to go from the Antenna on my balcony to my receiver? Most of the posts in here are about mods, how much do they matter in getting your signal out far? Are they illegal in Canada where you don't need to get a licence to do CB & does anyone know anyone in Ottawa or Toronto that can do them?

Below is a list of equipment I have purchased on ebay & is on it's way to me.
Hustler model 1c-100s magnetic mount cb antenna. 44 inches in length.
Paradynamics Watt/SWR Meter with Antenna Tuner Model #PDC-5
"Breaker" brand 12-volt regulated power supply.
Cobra Top of the Line + 148 NWST-FR CB
Valor Noise Cancelling PA Talkback Speaker

Thanks,

Trevor (ottawa ontario canada)

Everything is fine so far...

>You can measure the PEP of a carrier because it is a sine
>and has a crest. You can measure AM power because it has a
>crest. SSB pwer is measureable in the same regard.

Not quite. Remember that AM starts with a carrier and audio is added to that carrier. SSB has no carrier. You could say that SSB is pure modulation. The key word here is "envelope" (not "crest"). That envelope is created by modulation. So PEP is actually a measure of the power of the modulation envelope, composed of both RF and audio.

A unmodulated carrier (AM) has no envelope, so PEP is going to be zip. Even if you wanted to try and measure AM power, AM has two sidebands that cancel each other when measuring power, which is why your wattmeter doesn't move when you speak into the mic. Some meters cheat and include a "sample-and-hold" circuit to measure the AM power peaks, but this isn't accurate because it doesn't measure the power at the valley, nor does it subtract the carrier power from the modulation envelope power. Not only that, but measuring PEP on AM is almost pointless since peak power is going to max out at 4 x carrier power under 100% modulation, and if you can get an accurate measure of the carrier power and another meter shows your modulation percentage, a PEP meter on AM brings with it more problems than it solves. So basically, the only reason PEP meters are used by CBers is so they can watch the little needle move.

>The RMS method is just fine for measuring these modes as
>well.

Again, RMS only works on a sine wave. A modulated signal has two components: the RF and the modulation. The RF may be a sine wave, but the modulation may not (and usually isn't).

>The biggest problem with either of these methods is how
>people interpret them and to what degree these are held as
>absolutes.

You couldn't be more correct there. For a broadcast transmitter, measuring power is very important or you have the FCC breathing down your neck. A CBer shouldn't be too concerned with power, since the little bit of variation in the power that's used (even after a super-duper power mod) isn't going to amount to a hill of piss ants. As far as the "competition CBers", all they are interested in is "swang" and causing interference, the louder the better. Most of the old-school hams I know don't even use a wattmeter, they just tune up the radio as best they can so it puts out a good, clean signal -- they have learned from experience that that's the best way to be heard. Power is very overrated.

>I say when it comes to speech waveform PEP measurements with
>the normal methods used on the cb and ham bands, ie. Bird
>wattmeters with or w/o PEP kits, Dosy meters etc., all you
>can hope for is an averaged and probably inacurate reading.

An accurate statement.

>about 20 -30% of the overall time but the remainder of this
>waveform is way down below that for the same time slice.
>Here is where I expect the pro compressor/limiter guys to
>jump in.

I will when I get my compressor working the way I want it to work.

>When it comes to either SSB or AM there are other factors to
>consider. During each of these multi-tone modulation methods
>there is the probabilty that some of the tones in SSB will
>add in phase wich will provide a output power(for that
>period) of typically 6db higher than a single tone.

Bingo! And it's not a probability, it's a reality.

> On AM it
>is probable that some of the tones will be in phase with the
>carrier for a moment allowing for a similar boost in output.

Something like that. I don't think audio harmonics are going to shoehorn their way into the wavelength of the RF, but the increase in power can and does exceed 100% modulation, which causes clipping and related harmonics; that is, unless a limiter is used to prevent those

audio peaks from overmodulating the final.

>Can your meters follow this in the PEP mode? You might get a
>close reading if you put a steady hum in the mic but is that
>the way you normally talk?
>
>So you see? The PEP and RMS methods are fine if you
>understand the limitations.

As I stated above, the limitations of measuring AM in PEP are too extensive to be of any practical benefit, and that's assuming it could be done with any real accuracy.

I'm going to go out on a limb here.

I suggest that everyones means of power measurement are accurate while at the same time inaccurate.

In the PEP case, the power measurement is made at the crest of one cycle. It's a measure of the instantaneous power. This particular measurement is independant of the waveform. You can measure the PEP of a carrier because it is a sine and has a crest. You can measure AM power because it has a crest. SSB pwer is measureable in the same regard.

The RMS method is just fine for measuring these modes as well.

The biggest problem with either of these methods is how people interpret them and to what degree these are held as absolutes.

I say when it comes to speech waveform PEP measurements with the normal methods used on the cb and ham bands, ie. Bird wattmeters with or w/o PEP kits, Dosy meters etc., all you can hope for is an averaged and probably inacurate reading.

I qualify this by stating the previous..The PEP value is based on a one cycle measurement of the crest of that cycle. Our common metering cannot follow and report on that one cycle. You may find a way to maintain an steady enough output that allows for enough samples to represent that one cycle and cause a generally accurate reading. This is not indicative of your overall signal quality or output power. We know that a speech waveform is typically hitting peaks at about 20 -30% of the overall time but the remainder of this waveform is way down below that for the same time slice. Here is where I expect the pro compressor/limiter guys to jump in.

When it comes to either SSB or AM there are other factors to consider. During each of these multi-tone modulation methods there is the probabilty that some of the tones in SSB will add in phase wich will provide a output power(for that period) of typically 6db higher than a single tone. On AM it is probable that some of the tones will be in phase with the carrier for a moment allowing for a similar boost in output.

Can your meters follow this in the PEP mode? You might get a close reading if you put a steady hum in the mic but is that

the way you normally talk?

So you see? The PEP and RMS methods are fine if you understand the limitations.

Well George I stand corrected for the search
parameters of one nic, but the other info and screen
nics are dead on.
As for breaking our agreement.....
"I'll make you a deal George, you go for one week
with making posts without some sort of reference to me,
I'll never use that signature file again!"
Since you are asking me about as nice as you ever
will to stop, I will not make any post directed at you for one
week. You again, have to put your alias in check though,
because that's just not really fair is it?
Think about it, We're going out this evening, so
I won't probably check in until the morning.

Landshark

How about loading the Arch in ST. Louis. Or in a place with electrified trains or streetcars some gizmo within the limit that managed to contact the overhead and the rails with one brute of a blocking capacitor. Hell, steal the loco; you'd be Channel Master til they carted you away. Think Big, Jim, Think BIG.

what a laugh. tell that to the millions of free band operators that i talk to on a regular basis every time there is an opening in the band. just take a look at the pics i posted of my "un-viable" station. looks alive and well to me. voob,you are such a weak joke.just like the mud duck, 4 watt,operator that you are. if you plan on ridding the air waves of all of us...all i can tell you is...lotsa luck buddy.
youre going to be an old man,shitting in your diapers,and i,and millions of other operators like me are still going to be out there,having a ball,playing on the radio,every godamn day! thats just the ones in the united states.what about the rest of the operators out there scattered all over the globe?. youll have to wait on the "new world order" to take over befor anything could be done about them. so voobie,relax,have a coke and a smile. im sure ill grin,and think about you....every time i key up out of band. its people like you that make this hobbie just that much more enjoyable! well,the skip is rolling right now,and ive got tell hundreds of my friends around the globe,"howdy" from texas. see yah in the funny papers voob.

frog,linears are not illegal.most of them are made for 10 meters.they are completely legal for that use.why do you suppose that the fcc hasnt done anything about them. they(the distributors), have to be caught selling the units "for 11 meters" in other words,an agent usually has to see an amp listed for sale "for use on 11 meters" or a sale has to be made to an agent where the amp is being sold to be "used" on 11 meters. but strickly speaking,these amps are completely legal for 10 meters.sorry,but there is nothing illegal about them.why do you think the sellers always have the disclaimer"not for use on 11 meters" the distributer has no responsibility "after the sale" for how the unit may be mis-used.just like guns are legal...the seller has no responsibility for how the product may be mis-used after the sale.sorry, but this is the un-varnished truth.just ask some of the hams out there,theyll tell you. elpasogunslinger

We'll let Aaron give you the precise legalities but they come down to this: as a licensed Amateur I can use virtually any piece of junk I can get on the ham bands as long as I am willing to meet the tech specs and take any fallout. Making them is another story entirely and offering them for sale is a can of worms unto itself.

Between 25 and 35 MHz an amp must require 50 watts of drive to be legal to sell even to an Amateur and there are a number of other caveats. As most of the units in question will not come anywhere near meeting ITU purity specs the issue is pretty well settled. That there are guys making trash in their garages is undenied but calling them 10-meter amps does not change a blessed thing.

Possession implies intent to sell or intent to use in any practical setting so no one gets off the hook. Dream on Kenneth.

Dick N&#65533;BK

I have a president jfk(8-10 on cosmetics)and a brand new 12 surge 10 amp constant power supply(10-10 on cosmetics). The radio deadkeys 15 and swinds to 30 all the way up. It has am/fm/upper odds and lowerodds. It is loud!!! It has the stock mic with it. I have done alot of DXing with it. I really dont want to seperate them so i am asking 245.00 plus shipping for the pair or trade for a base that has odds in it that has not been cobbeled together. Unfortunatley i have no pics but u can hear me 26.805 between the hours of 9pm and midnight. I go by 015 around the great lakes. If u hear me holler at me!

thanx,
015 around the northern lower pennisula of michigan

that and the ones who think that crying to everyone in a newsgroup is changing things or is going to make a difference. Bitch to the FCC and the manufacturers. If the FCC actually did its job instead of being lazy band selling greedy fucks there might not be such a problem. Not to mention if RCI got smacked down again since they do produce a majority of the export/illegal radio equipment out there. Sure getting some people to quit buying them helps a little, but not when its only one out of every 100,000 people accross the US and mainly people in a WORLDWIDE news group.

But good luck to Aaron, i hope this crusade makes his life all the better and adds meaning to his near pointless existance.

I enjoy delving into the dynamics of a topic like 11 meters, since it is also something that I hold a great interest in. As with many such tpoics, there is never a clear "black and white" blanket answer that is a catch all for most of the issues. The CB band is is the state that it's in due to many factors; economic, social, technical and regulatory.

It's also interesting to look at radio hobbies in general, against the backdrop of the digital age, and what their future holds. The way things are going, I don't see much of a future for either ham or CB, especially when you consider that almost every Tom, Dick and especially Marcia, carries a cell phone, and that converged broadband services are just around the corner, there won't be much need for "old fashioned" analog radio, except for "old timers" to wax nosalgic about.

Can't disagree with the logic but 'need' is an elusive concept. There are an awful lot of horses around and they cannot be beat for expensive polluting transportation to nowhere you really want to go. Every fall the bows and arrows come out not to mention black powder loudenboomers to assassinate Bambi and most people really do not like venison. The Santee Sioux are willing to guide Nimrod to pheasants but they themselves prefer chicken down at the casino. And there is nothing like getting cold and wet turkey calling.

I even know a newbie radioman learning to dittybop.

I don't know about that. Two-way radio is still the backbone of
long-distance communication. During a disaster power may be lost,
cell-phones may be clogged, land-lines may break, and satellites may
even be knocked out by solar flares or cosmic junk, but the old
two-way radio will still be working. And even after a nuclear blast,
the EMP is likely to knock out most semiconductor technology, leaving
only those old tube-type boatanchors working. A dismal thought indeed,
but maybe there's something we can learn from those "old-timers".

Everyone knows amps on 11 meters are illegal. So what? So we have the
holier-than-thou schmoes out there trying to convince us that we ought
to change our ways. Look, I,ll make it real simple 4 u self appointed
cops and monitors or whatever the hell u refer to yourselves as. We know
the risks, if we take the chance, most of us are ready to deal with the
consequences should the heat come down. I have respect for MOST hams,
but I achieve the same results at a fraction of the cost. If I bleed a
neighbor, all they have to do is knock on my door. We will work it out.
I have been in the same area for quite some years and have no problems.
If I am not hurting anyone, why the hell should you care WHAT I do? The
bottom line is you shouldn't. Get a life. You guys that bitch about us
freebanders and "peaked" radios have way too much time on your hands. I
don't need to run anymore than 30 watts where I am located and I talk
all over the world......yes.. on the freeband. Nothng pleases me more
than one of you cb rambos to come in to my conversation and start
preaching about rules. God, I love to squash you suckers.

??????????????????????
??????????????????<<

The difficulty you exhibit is natural and an extremely old approach.
I liken squashing you channelmaster wannabe's to the act of pointing out
your hypocrisy and BS here. I'm merely the fallout effect of your
incorrect causes.

Gettin'
WAY-UP from the 'pile<<

Hello, Aaron#2. I must admit, I usually ignore you because you are completey full of troll value,flame material and little else. However, your attempt at getting the heat off Lelnad's problems and redirecting the topic to one of me has an affirmative nod from me this time. Why? Simple. You are now teaching Lelnad what the rest of the group has taught him for years..... how to disagree or take issue with someone or something for a legitimate reason, not a self-created one. For the first time ever in this newsgroup's history, one of you malcontents put forth in the body of your posts a genuine post by me that you finally have a real issue with.

>Let's get one thing straight Twisty.<<

Beginning when? Only one post you ever made could even be considered remotely accurate.

>you are a punch clown and only a punch clown.<<

Then you shouldn't feel the need to go out of your way like you do..but carry on with your lack of superb communication skills..all this time you could have learned code an dquit monkeying around with all the losers who want something for nothing.

Not managing to do any damage with a year of forges, you finally set your sites on some truth. Good show. The above posts by me pissed you off apparently,,thats fine..give it to me with both barrels,,I stand behind what I write...let's hear your problem with the above....IF you have learned how to communicate properly. Yes, there exists tons of "Twistedhedness", everything quoted has been forges.
    Lelnad
  when even AA#2 can surpass his intellect I guess I ought to extend some sort of "thanks" to you since the reeal posts indicate just exactly the type power I run. Kinda shoots your "kilowatt Charlie" theory all to hell about me.

>Nobody ever said you run a kilowatt, you sun-baked paranoid.<<

You're missing posts again. See what happens when you run back and forth and use OE and forget to turn off word wrap so often.
"Hall" told me what I do regularly couldn't be done, illustrating that he, not unlike you, know practically nothing of real world applications concerning propagation of eleven meter signals when interacted with H20 and a few watts properly extolled.

Now you can cry all about my position on freeband or willingness to key on you channelmasters and self-appointed radio cops.. Nevertheless, it;;s nice to see you leaving the reducing of one's self strictly to one Lelnad C. Scott, licensed amateur KC8LDO..and always remember, one can break FCC rules much easier than one like you ever will be able to enforce them. The mere act of freebanding presents no danger from prosecution as long as the power is kept at a minimum and one is not straying into hammie bands. The bands directly above and below the cb bands are usually perfect for DX, quiet channels, and bothering no one.

>Looter's justification: "no one was home so I took what was there".
-A<<

Whatever it takes to make you feel better about yourself.
I liken it to the single empty lot in the inner city that provides loads of fun. The landlord isn't using it at the time, he knows the kids are playing stickball on his property, and if ever comes a time when he needs the lot, he will use what resources available to do as he wishes with his property. You're the crotchety old man alone in the window peeping from behind a curtain, spying on the kids, cursing they should have summer jobs instead of enjoying their juvenile years, all because you were mistreated and miserable at their age and you feel others should share your painful hauntings.
Now run along like and try and bother someone else and make certain to cry when your usual failure is recognized.

Yep, just like they have been doing since the very first mobile radio.

> Unless one is stocked with generators or batteries
>for such a situation, you're in the same position as everyone else.

Not if most everyone else's radio doesn't work.

You seem to be under the impression that tube radios use horrendous
amounts of power. Some do. Others are designed with tubes having
low-power filaments. These were common tubes in portable broadcast
receivers, but the market died in the late 50's/early 60's when the
transistor radio hit the shelves.

BTW, good point, twist.

Any amp offered for sale in the 25-35 range needing less than 50 watts of drive is a violation.
So most of the amps you are seeing offered in the ham outlets are grounded-grid Class Bs that require something in the 50-100 range to function. And those usually come without 10-12 meter taps the kits for which are sold by reputable outlets to licensed people only. Most by the way are never bought or installed because power is generally useless on these bands, the barefoot 100-200 watt transceivers operate admirably when the bands are open and even that is excessive. The amp manufacturers like it that way because while they will operate on 10-12 the tank circuits are pretty marginal so running them like on 75 or 20 is asking for trouble. Keeping the tank Q down to the usual 10 is virtually impossible and 20 takes some cute design and tank voltages and currents are multiplied by Q. Few if any of them use the copper tubing coils that any amp over 500 watts should have and the cap voltages get a bit scary. Feed these beasts with some harmonic-laden trash and all hell breaks out.

In a lot of ways this is a pain in the drain to the Amateur Service because the rules did in some decent gear. Ten-Tec made a sweet little rig called the Argonaut that did have an external low-drive amp when one was not into QRP operation. When the rules came in, the amp had to be discontinued. There were some decent 10 watt rice boxes owing to their rules for which any number of linears were built that went right out the window. So on the ham bands today you run 10 or you run 100, nada in between.

Sure, you can buy an Amateur amp if you have the 50 watts available and know about coil taps and it is not illegal to build or sell it. Texas star pulls the CW transmitter gig and probably still has the original chirpy CW driver board in stock. And given the number of CB sideband rigs on ten meter mobile there are undoubtedly some solid-state amps like the new Prof special that might actually work in this application but Prof is still taking the admittedly minor risk that he will be busted for his handywork even if he called them and advertised them as 10 meter units and sold them to Tech Pluses and above only. If I bought one to use on 10, he is in fact the only one who would be busted, I am as legal as sunrise.

Calling it 10 meter does not get around the rules.

4468. Re: re-illegal amps for sale-THE FACTS

Newsgroup: rec.radio.cb
Date: 2002-05-16 16:50:08 UTC
From: alx4443@aol.com
Message-ID: <20020516125008.17622.00000017@mb-cr.aol.com>
Source record: 124333

>From: "Kenneth Vaughan" kenneth.vaughan@worldnet.att.net:

"..frog,linears are not illegal.most of them are made for 10 meters.they are..."

I Just have to chime in with a correction. I don't care at all if a CB operater uses an amp or not, but They ARE ILLEGAL to sell in the USA, even if labled a "10 Meter" amp. Don't confuse the FCC's lack of enforcement capabilities with the legalities.
In the latest Edition of The FCC Rule BOOK (12th edition, ISBN:0-87259-785-7, ARRL #7857), page 4-47 has the facts.
since 1978, All amps operating below 144Mhz must be Granted Type Acceptance, & No new amplifier can be sold, or will be given FCC type approval if they can operate between 24-35Mhz as sold, and/or will reach their rated output with less than 50W input.
There are NO 10M amps at all, listed in any "Real" Ham dealers catalogs (HRO, AES, Lentini ect). They are all listed as "15-160M", & the buyer can send away to the Mfgr w/a copy of license in order to get the mod or kit to self-restore the 10-12M operation. Call Ameritron Amps in MS, & they will also verify that they can't legally sell any 10M "out of the box" capable Amateur amps in the USA. The only exceptions to the sales listed in the rule book are for Amateur -to-Amateur sales of used or home built equipment.
Dealers that sell "10M" amps with little cute notes about "for export or amateur use" are either stupid about the rules, or don't care, because notes are meaningless, & that doesn't give them any FCC exemption to sell non-type accepted equipment.
You can't , for example, open up a store in NYC that sells Dynamite, M-80's & cherry bombs, put a little note on them saying " for export, out of state or licensed use only" & the proceed to sell them to anyone walking in..... "But officer, I have a little note on the stuff..."

Hey Twathed
If you were as accurate with your stupid dreams of antikeyclown
busting as you are as prolific with gay sexual encounters in
truckstops you would be a lot better at it.

WARNING: QUIT GETTING HIGH AND DOING THE HETERO THING!!!
You made a retard kid and he is FUGGGGLY!

Bert,

The insults and slanders are evidence of how much the CB criminal
fagggots hate N8. This is no doubt a great amusement to him. He knows
all he has to do to get these chickenboy punks riled up is post here.

> > Indeed there are legends about N8 such as; his not having a job, his

An extreme scenario. Yes, there are conditions where currently fragile digital networks can be overloaded and/or knocked out. But it's only a matter of time before reliability becomes close to 99.99%, with redundant systems and many backups. For the average citizen, why would someone invest in CB or ham radio, with questionable reliability and range, when all they want is to be able to contact someone, and a cell phone can contact anyone, anywhere in the world (In the very near future). There was a time when many people didn't have ordinary land-line telephone service. Today, the phone is taken as a given necessity. In a few years, people who don't have cell phones and

portable data terminals will be considered technically illiterate, or at the very least, disadvantaged.

I heard a conversation on FRS the other day, that pretty much put the writing on the wall. A man was talking to his wife on an FRS radio, and as he drove farther away he started having trouble hearing her. Finally he told her to call him on the cellphone. How long will it be before people just don't bother with radios at all?

There are some advantages to analog radio; namely that you own your own equipment and you never have to pay access charges, and the complexity is less, meaning that radio will still allow communications in a doomsday scenario. There is also the challenge of working others under adverse conditions, and the allure that accompanies it. But these appeal to people "into" radio. Many average people would never go that route now that cellular and the internet are so commonplace.

Most people, who are into radio hobbies these days are not doing anything on the cutting edge of technology. They are still doing the things that have been going on for generations. There have been some relatively minor advances in technology, but the core operation is the same whether you are running a brand new Icom or Yaesu, or an old Collins. Heck most CB radios are still using early 80's technology.

Those of us already into radio, will most likely retain a "love" for it, which will be more nostalgia than anything else, but as new generations come into this world, radio will get buried under all the "newfangled" digital technologies, and relegated to "old fashioned" status. It's only a matter of time before the need to continue these services will be questioned and re-evaluated. I'm not saying it will happen next year, or in 5 or 6 years. But at some point, it will happen.

How do you know he isn't using it? Go listen to 6.761 mhz lsb. It is a
military tactical channel. One or two times within 24 hours there
might be a short, coded voice exchange between military aircraft. Most
of the time you hear nothing at all. Does that mean it's not being
used? I guess if you use "keyclown logic" it does!

> he knows the kids

You left out the part about the big signs that say "NO TRESPASSING,
$10,000 FINE". You also left out the part about the legal tenants who
cannot use the lot because it is overrun with kids. And the kids
leaving heaps of rotting garbage on the lot. And some of the kids who
are even vandalizing adjacent properties. Oh yeah, and they are no
longer playing stickball because the kids have formed gangs and they
use the lot as a battle arena to fight in.

Not at all. I have always felt great about myself, it is you constantly
seeking approval and justifications from this group.

>Wow, you're worse than I thought.<<

What you think has no significance.

I liken it to the single empty lot in the inner city that provides
loads of fun. The landlord isn't using it at the time,

>How do you know he isn't using it? <<

I just said so.

>Go listen to 6.761 mhz lsb. It is a military tactical channel. One or
two times within 24 hours there might be a short, coded voice exchange
between military aircraft. Most of the time you hear nothing at all.
Does that mean it's not being used?<<

I dont talk on 6.761

>I guess if you use "keyclown logic" it does!<<

Your faulty logic is mentioning an assigned hammie freq.

he knows the kids
are playing stickball on his property, and if ever comes a time when he
needs the lot, he will use what resources available to do as he wishes
with his property.

>You left out the part about the big signs that say "NO TRESPASSING,
$10,000 FINE". <<

Didn;'t leave it out...it doesn't exist. Since you want to attempt a
technicality, at least reflect it accurately..any serious or truthful
warning would be along the lines of "Violators will be warned. Repeat
violators may be prosecuted", but then that would be too much truth for
you to digest, maybe to the extent of being even more detrimental to
your damaged ego and fragile psyche.

>You also left out the part about the legal tenants who cannot use the lot because it is overrun with kids.<<

Only in the applied dictionary of Voobnerisms can one confusingly and erroneousy associate "vacant" with being occupied.

>And the kids leaving heaps of rotting garbage on the lot.<<

That isn't the kids garbage, it's yours from littering the poles and walls with "no trespassing" signs, by your self-proclaimed order that no one recognizes.

>And some of the kids who are even vandalizing adjacent properties.<<

That's you on your knees with a baseball cap turned sideways painting graffitti all over the place in order to look like one of the kids so they get the blame. Same thing as your BS, forging and lies among these pages in any of your sordid failed attempts at creating an image of those that have the uncanny and deity-like ability to make you react on cue.

>Oh yeah, and they are no longer playing stickball because the kids have formed gangs and they use the lot as a battle arena to fight in.<<

But of course. Your proneness to violence emanates from many of your posts. Couple this with your views and comments concerning children and you have a real problem.

>-Aaron- <<

If it makes you feel better.

old tube-type boatanchors working. A dismal thought indeed, but maybe
there's something we can learn from those "old-timers".<<

Survey says:
How do those old boat anchor tube radios run when there is no power? You
put them in your car?

>Yep, just like they have been doing since the very first mobile radio.
<<

Yea, I have seen amps in cars with tubes, but they seem to have more
problems because of "road bounce" than solid state.

Unless one is stocked with generators or batteries for such a situation,
you're in the same position as everyone else.

>Not if most everyone else's radio doesn't work. You seem to be under
the impression that tube radios use horrendous amounts of power. Some
do. Others are designed with tubes having low-power filaments. These
were common tubes in portable broadcast receivers, but the market died
in the late 50's/early 60's when the transistor radio hit the shelves.
BTW, good point, twist.<<

Actually I'm under the impression that the majority of ops are not
equipped to deal with any long time power failures. I would certainly
venture to guess that hammies would have the cbers beat hams, er, hands
down when it comes to backup comms, generators and the like, and a mess
of folks bought stuff back when the Y2K thing was happening. Certainly
members of RACES and the such should be readily equipped and I know
those hammie survivalists that talk on that frequency they claimed as
their own are prepared, also.

Kenneth,

Randy is right you are mistaken. Please read the following. It will explain why.

Code of Federal Regulations]
[Title 47, Volume 1]
[Revised as of October 1, 2001]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR2.815]

[Page 557]

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS COMMISSION

PART 2--FREQUENCY ALLOCATIONS AND RADIO TREATY MATTERS; GENERAL RULES AND REGULATIONS--Table of Contents

Subpart I--Marketing of Radio-frequency Devices

Sec. 2.815 External radio frequency power amplifiers.

(a) As used in this part, an external radio frequency power amplifier is any device which, (1) when used in conjunction with a radio
transmitter as a signal source is capable of amplification of that signal, and (2) is not an integral part of a radio transmitter as manufactured.
(b) After April 27, 1978, no person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease), or import, ship, or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency power amplifier or amplifier kit capable of operation on any frequency or frequencies between 24 and 35 MHz.

Note: For purposes of this part, the amplifier will be deemed incapable of operation between 24 and 35 MHz if:
(1) The amplifier has no more than 6 decibels of gain between 24 and
26 MHz and between 28 and 35 MHz. (This gain is determined by the ratio
of the input RF driving signal (mean power measurement) to the mean RF output power of the amplifier.); and
(2) The amplifier exhibits no amplification (0 decibels of gain) between 26 and 28 MHz.

(c) No person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease) or import, ship or distribute for the purpose of selling or leasing or offering for sale or
lease, any external radio frequency power amplifier or amplifier kit capable of operation on any frequency or frequencies below 144 MHz unless the amplifier has received a grant of type acceptance in accordance with subpart J of this part and subpart C of part 97 or other
relevant parts of this chapter. No more than 10 external radio frequency
power amplifiers or amplifier kits may be constructed for evaluation purposes in preparation for the submission of an application for a grant
of type acceptance.

Note: For the purposes of this part, an amplifier will be deemed incapable of operation below 144 MHz if the amplifier is not capable of
being easily modified to increase its amplification characteristics below 120 MHz, and either:
(1) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a point where 0 decibels or less gain is exhibited at 120 MHz and below 120 MHz; or
(2) The amplifier is not capable of even short periods of operation
below 120 MHz without sustaining permanent damage to its amplification circuitry.

(d) The proscription in paragraph (b) of this section shall not apply to the marketing, as defined in paragraph (b) of this section, by
a licensed amateur radio operator to another licensed amateur radio operator of an external radio frequency power amplifier fabricated in not more than one unit of the same model in a calendar year by that operator provided the amplifier is for the amateur operator's personal use at his licensed amateur radio station and the requirements of Secs. 97.315 and 97.317 of this chapter are met.
(e) The proscription in paragraph (c) of this section shall not apply in the marketing, as defined in paragraph (c) of this section, by
a licensed amateur radio operator to another licensed amateur radio operator of an external radio frequency power amplifier if the amplifier
is for the amateur operator's personal use at his licensed amateur radio
station and the requirements of Secs. 97.315 and 97.317 of this chapter
are met.

[40 FR 1246, Jan. 7, 1975; 40 FR 6474, Feb. 12, 1975, as amended at 43 FR 12687, Mar. 27, 1978; 43 FR 33725, Aug. 1, 1978; 46 FR 18981, Mar.

27, 1981; 62 FR 10470, Mar. 7, 1997]

[[Page 558]]

[Code of Federal Regulations]
[Title 47, Volume 5]
[Revised as of October 1, 2001]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR97.317]

[Page 604-605]

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS
COMMISSION (CONTINUED)

PART 97--AMATEUR RADIO SERVICE--Table of Contents

Subpart D--Technical Standards

Sec. 97.317 Standards for certification of external RF power
amplifiers.

(a) To receive a grant of certification, the amplifier must
satisfy
the spurious emission standards of Sec. 97.307(d) or (e) of this part,
as applicable, when the amplifier is:
(1) Operated at its full output power;
(2) Placed in the ``standby'' or ``off'' positions, but still
connected to the transmitter; and
(3) Driven with at least 50 W mean RF input power (unless higher
drive level is specified.)
(b) To receive a grant of certification, the amplifier must not be
capable of operation on any frequency or frequencies between 24 MHz
and
35

[[Page 605]]

MHz. The amplifier will be deemed incapable of such operation if it:
(1) Exhibits no more than 6 dB gain between 24 MHz and 26 MHz and
between 28 MHz and 35 MHz. (This gain will be determined by the ratio
of
the input RF driving signal (mean power measurement) to the mean RF
output power of the amplifier); and
(2) Exhibits no amplification (0 dB gain) between 26 MHz and 28
MHz.
(c) Certification may be denied when denial would prevent the use
of
these amplifiers in services other than the amateur service. The
following features will result in dismissal or denial of an

application
for certification:
(1) Any accessible wiring which, when altered, would permit
operation of the amplifier in a manner contrary to the FCC Rules;
(2) Circuit boards or similar circuitry to facilitate the addition
of components to change the amplifier's operating characteristics in a
manner contrary to the FCC Rules;
(3) Instructions for operation or modification of the amplifier in
a
manner contrary to FCC Rules;
(4) Any internal or external controls or adjustments to facilitate
operation of the amplifier in a manner contrary to the FCC Rules;
(5) Any internal RF sensing circuitry or any external switch, the
purpose of which is to place the amplifier in the transmit mode;
(6) The incorporation of more gain in the amplifier than is
necessary to operate in the amateur service; for purposes of this
paragraph, the amplifer must:
(i) Not be capable of achieving designed output power when driven
with less than 50 W mean RF input power;
(ii) Not be capable of amplifying the input RF driving signal by
more than 15 dB, unless the amplifier has a designed transmitter power
of less than 1.5 kW (in such a case, gain must be reduced by the same
number of dB as the transmitter power relationship to 1.5 kW; This
gain
limitation is determined by the ratio of the input RF driving signal
to
the RF output power of the amplifier where both signals are expressed
in
peak envelope power or mean power);
(iii) Not exhibit more gain than permitted by paragraph (c)(6)(ii)
of this section when driven by an RF input signal of less than 50 W
mean
power; and
(iv) Be capable of sustained operation at its designed power
level;
(7) Any attenuation in the input of the amplifier which, when
removed or modified, would permit the amplifier to function at its
designed transmitter power when driven by an RF frequency input signal
of less than 50 W mean power; or
(8) Any other features designed to facilitate operation in a
telecommunication service other than the Amateur Radio Services, such
as
the Citizens Band (CB) Radio Service.

[54 FR 25857, June 20, 1989, as amended at 63 FR 36611, July 7, 1998]
[Code of Federal Regulations]
[Title 47, Volume 5]
[Revised as of October 1, 2001]
From the U.S. Government Printing Office via GPO Access
[CITE: 47CFR97.315]

[Page 604]

TITLE 47--TELECOMMUNICATION

CHAPTER I--FEDERAL COMMUNICATIONS
COMMISSION (CONTINUED)

PART 97--AMATEUR RADIO SERVICE--Table of Contents

Subpart D--Technical Standards

Sec. 97.315 Certification of external RF power amplifiers.

(a) No more than 1 unit of 1 model of an external RF power
amplifier
capable of operation below 144 MHz may be constructed or modified
during
any calendar year by an amateur operator for use at a station without
a
grant of certification. No amplifier capable of operation below 144
MHz
may be constructed or modified by a non-amateur operator without a
grant
of certification from the FCC.
(b) Any external RF power amplifier or external RF power amplifier
kit (see Sec. 2.815 of the FCC Rules), manufactured, imported or
modified for use in a station or attached at any station must be
certificated for use in the amateur service in accordance with subpart
J
of part 2 of the FCC Rules. This requirement does not apply if one or
more of the following conditions are met:
(1) The amplifier is not capable of operation on frequencies below
144 MHz. For the purpose of this part, an amplifier will be deemed to
be
incapable of operation below 144 MHz if it is not capable of being
easily modified to increase its amplification characteristics below
120
MHz and either:
(i) The mean output power of the amplifier decreases, as frequency
decreases from 144 MHz, to a point where 0 dB or less gain is
exhibited
at 120 MHz; or
(ii) The amplifier is not capable of amplifying signals below 120
MHz even for brief periods without sustaining permanent damage to its
amplification circuitry.
(2) The amplifier was manufactured before April 28, 1978, and has
been issued a marketing waiver by the FCC, or the amplifier was
purchased before April 28, 1978, by an amateur operator for use at
that
amateur operator's station.
(3) The amplifier was:
(i) Constructed by the licensee, not from an external RF power

amplifier kit, for use at the licensee's station; or
(ii) Modified by the licensee for use at the licensee's station.
(4) The amplifier is sold by an amateur operator to another
amateur
operator or to a dealer.
(5) The amplifier is purchased in used condition by an equipment
dealer from an amateur operator and the amplifier is further sold to
another amateur operator for use at that operator's station.
(c) Any external RF power amplifier appearing in the Commission's
database as certificated for use in the amateur service may be
marketed
for use in the amateur service.

So, if anyone knows, how do companies like CCD (Cash and Carry, west coast) or H & Y (Copper Elec in disguise I've always heard) get away with selling this stuff? Just for kicks, I looked around for some of the "classic" amps I remember from 10 years ago and low and behold I came across H & Y's site now selling all of this stuff - amps, export rigs, etc. right on their webpage.

Who on earth are you still talking to on "lowers"? Just for kicks I threw my (original) President Grant DX (yes, THAT one!) in my truck to see what if anything was still on between 26.515 and 27.805. In short, I didn't hear anything except for a few islanders, the typical crowds on any "channel" ending with a 6, and some truckers on 19. All the old haunts - 27.505 - 27.635 for example - were completely empty. "lowers" were always a lot quiter than "uppers", so I figure that was just a waste to even check.

It is a fact that conductor diameter affects the resonant length of an antenna. It becomes significant only when the conductor is short and fat such as may occur when the conductor is a short fat rod at VHF and at UHF

The "end effect" depends on such things as height above ground and is NOT the constant value as is frequently specified in the ARRL bibles.

The two effects are one and the same thing.

On thin wires at HF the effect is small enough to be ignored in comparison with the pruning which may be imagined necessary after an antenna has been erected.

Most pruning activities are unnecessary when based on the accuracy of SWR meters and antenna analysers at the higher frequencies. But it does keep users happily occupied which is not a bad thing.

twistedhed@webtv.net (Twistedhed) wrote -
Whatever it takes to make you feel better about yourself.

>So you'll use whatever lame justification it takes to make yourself
feel better about breaking laws? <<

Not at all. I have always felt great about myself, it is you constantly
seeking approval and justifications from this group.

>Wow, you're worse than I thought.<<

What you think has no significance.

I liken it to the single empty lot in the inner city that provides
loads of fun. The landlord isn't using it at the time,

>How do you know he isn't using it? <<

I just said so.

>Go listen to 6.761 mhz lsb. It is a military tactical channel. One or
two times within 24 hours there might be a short, coded voice exchange
between military aircraft. Most of the time you hear nothing at all.
Does that mean it's not being used?<<

I dont talk on 6.761

>I guess if you use "keyclown logic" it does!<<

Your faulty logic is mentioning an assigned hammie freq.

he knows the kids
are playing stickball on his property, and if ever comes a time when he
needs the lot, he will use what resources available to do as he wishes
with his property.

>You left out the part about the big signs that say "NO TRESPASSING,
$10,000 FINE". <<

Didn;'t leave it out...it doesn't exist. Since you want to attempt a
technicality, at least reflect it accurately..any serious or truthful
warning would be along the lines of "Violators will be warned. Repeat
violators may be prosecuted", but then that would be too much truth for

you to digest, maybe to the extent of being even more detrimental to your damaged ego and fragile psyche.

>You also left out the part about the legal tenants who cannot use the lot because it is overrun with kids.<<

Only in the applied dictionary of Voobnerisms can one confusingly and erroneousy associate "vacant" with being occupied.

>And the kids leaving heaps of rotting garbage on the lot.<<

That isn't the kids garbage, it's yours from littering the poles and walls with "no trespassing" signs, by your self-proclaimed order that no one recognizes.

>And some of the kids who are even vandalizing adjacent properties.<<

That's you on your knees with a baseball cap turned sideways painting graffitti all over the place in order to look like one of the kids so they get the blame. Same thing as your BS, forging and lies among these pages in any of your sordid failed attempts at creating an image of those that have the uncanny and deity-like ability to make you react on cue.

>Oh yeah, and they are no longer playing stickball because the kids have formed gangs and they use the lot as a battle arena to fight in.<<

But of course. Your proneness to violence emanates from many of your posts. Couple this with your views and comments concerning children and you have a real problem.

>-Aaron- <<

If it makes you feel better.

Aarons analogies shot full of holes again.

I especially liked this one:

"That's you on your knees with a baseball cap turned sideways painting graffitti all over the place in order to look like one of the kids so they get the blame. Same thing as your BS, forging and lies among these pages in any of your sordid failed attempts at creating an image of those that have the uncanny and deity-like ability to make you react on cue. "

I can almost picture it! ROFL

Consider a high 1/2-wave dipole of 14 gauge wire.

At 1.9 MHz the "end effect" results in a resonant frequency 40 KHz lower (2.1%) than a true 1/2-wavelength. But the working bandwidth of the antenna is 236 KHz between the 3dB points.

At 29 MHz the "end effect" reduces (2.9%) resonant frequency by 0.84 MHz but the working bandwidth is 5.3 MHz.

The ARRL Antenna Book gives an end-effect length reduction over the whole HF band of 5% but this probably includes the practical effects of proximity of the antenna ends to supporting and insulating structures, and height above ground.

The effect of enamel wire insulation and other thin insulation is entirely negligible.

Hey Tel, long time no see.
I'm not sure who you are jabbing at here but I think its pretty obvious
that element diameter makes a whole heap o' difference in length. At HF
its not much of an issue but at VHF/UHF you can't just whack out an
antenna of 'handy' tubing without some compensation for diameter.

Any of this ONLY applies when the meter is reading watts that have been through a Bird peak reading meter and a spectrum analyzer so you know that you are hearing true "Bird" -AND- RMS troll baiting watts!

I see what you are saying, but personally I don't think "old-fasioned" radio will resign itself to nostalgia. I see radio akin to the wheel: No matter how computerized, fuel-efficient or aerodynamic the vehicle may become, it's still rolls along on wheels, yet people are always going to be riding around on bicycles and tooling around the garden with a wheel-barrow. Old-fasioned? Sure, and you might even call it primitive. But for many jobs "old-fasioned" and "primitive" just can't be beat.

Yep. Aside from the VERY painful RF burns, there are other things to worry about:

http://www.osha-slc.gov/SLTC/radiofrequencyradiation/rfpresentation/intro.html
http://www.osha.gov/SLTC/radiofrequencyradiation/index.html

The EPA requires Environmental Impact studies for broadcast transmitters, including RF exposure effects. The FCC recognizes the health effects from too much RF in their rules: CFR 2.1091, 2.1093, et. al. And that's just the beginning, because you also have to consider the indirect consequences...

Sounds alot like what the "CW Forever" types are saying today, as they have to increasingly justify an antiquated mode to younger, more technically savvy, people who don't see the romance that CW communications provided for the old timers.
In a few years it will be analog voice operators under the gun, justifying their (by then antiquated) modes to another generation of people born and bread in the digital age, who talk of QPSK, QAM, TDMA, and CDMA etc. like we refer to AM, FM and SSB.

RF and radio will still have a place, as we will always need a way to get a signal from point A to point B without wires. But the modes that are used and the technologies will be radically different in the future.

Working DX on a digital voice mode would be interesting, as the charateristics are very different from analog. The signal would be DFQ until the bit error rate went above the set threshold, and the signal would just be gone.

If you don't believe me, just lower your 80 meter dipole down to 1 foot above ground level and check the resonant frequency. You'll be surprised at the experience.

Exactly the same reduction in resonant frequency occurs with radials when near the ground or other structures. When you think you have nice, resonant, 1/4-wave radials or counterpoises - you havn't !

Now you'll be reduced to making accusations that I'm misusing the misnomer "end effect". ;o)

Maybe it should be called 'ground effect' ? Uh oh, I think that the airplane boys have claimed that one already...

The distinction might be between 'self capacitance' (that can happen in complete isolation) and 'capacitance with other stuff in the area' (like small blue planets).

Geesus, I'm starting to sound like CAM...

It's hard to see the future. What I would like to see is a small band,
or several small bands, allocated for license-free CW only at a
reasonable power, maybe 100W max. The bands don't have to be large to
accomodate a lot of users, maybe just a few kilohertz wide. Then the
rest of the spectrum can be used for those bandwidth-hungry digital
modes.

>In a few years it will be analog voice operators under the gun,
>justifying their (by then antiquated) modes to another generation of

Well, I have heard of experimental radios using FM with extremely low
deviation ratios, so voice may not be going out the window so soon.

>RF and radio will still have a place, as we will always need a way to
>get a signal from point A to point B without wires. But the modes that
>are used and the technologies will be radically different in the future.

True, but the simpler methods will continue to be used, and they will
also continue to work just fine. That's just a fact of life.

>Working DX on a digital voice mode would be interesting, as the
>charateristics are very different from analog. The signal would be DFQ
>until the bit error rate went above the set threshold, and the signal
>would just be gone.

The cutting edge seems to be analog pattern recognition. An analog
pattern is imposed on a single wave, and each different pattern is
defined as a "character". The patterns are recognized by the receiver
despite slight variations due to distortion. The result is a much
greater throughput with less error correction and very narrow
bandwidth. It's still in the experimental stages, but it might be a
viable mode for DX in the future.

The way I understand it, the end-effect is a type of electromagnetic
loading. If the loaded medium changes, it would make sense that the
end-effect would also be changed.

>Ever watch "Tremors"?<<

I can't recall if I saw it or not,,,terrible with recalling movie
names....last movie I saw with a reference to radio was the one with
Dennis Quaid.
As far as convincing me on the microphonic properties of tubes, I'm
sold..I can usually hear a difference when applied to an AM signal from
cb..,,but then again I'm not exposed to the latest and greatest
technology so I really don't know what's out there...There was a time I
was keeping up on the microbroadcasting equipment but the return of the
DX made me get away from it somewhat....I used to listen to a tech net

on Tuesday nights (I think) that discussed all this stuff, but I forgot which freq they were on....you'd think that with all this flat land a tube box wouldn't have much trouble in a mobile, but from the folks I have talked to around here, they don't stand up to regular use...it's probably as you said, they weren't designed for it in the first place or the tubes are wrong or something similar.

Sounds alot like what the "CW Forever" types are saying today, as they
have to increasingly justify an antiquated mode to younger, more
technically savvy, people who don't see the romance that CW
communications provided for the old timers.

>It's hard to see the future. What I would like to see is a small band,
or several small bands, allocated for license-free CW only at a
reasonable power, maybe 100W max. The bands don't have to be large to
accomodate a lot of users, maybe just a few kilohertz wide. Then the
rest of the spectrum can be used for those bandwidth-hungry digital
modes.<<

Hmmm,,,that's one I haven't heard propositioned before...at least by
itself...this one may be easier to get started than anything, Spark.
This idea could serve several needs.
The old-time super pro-codes should endorse it as it (probably) would
bring more interest to code than is taking place now. It would also
serve as a gathering place for the non-licensed who have a strong
interest in upgrading to a code level license. Just grasp the basics of
it, sit back and listen long enough, and how could one NOT learn it?
Allocation would probably be the biggest obstacle to getting this thing
rolling. As long as the freqs don't come from another part of the
amateur spectrum, I don't see any reason why this wouldn't be supported.
You oughtta float this idea to some of the hammie groups/sites,, see
what kind of reaction this receives.

The last commercial shop I worked had a stack of old tube-type
Motorola and GE mobiles. Just for kicks one slow day we hooked some of
them up. You could hear the spiders banging on the case trying to get
out, and smell their webs smouldering in the heat of the filaments,
but the radios worked just fine!

The first problem is figuring out where to put it. Get that problem
licked and then you can rally the masses. If only one band, it should
have good ground-wave -and- good skip. It would be better to set up
two or three bands set on their own harmonics (just like the ham
bands). That would make it cheap and easy for both experimenters and
manufacturers.

Because that is what they were built to do. They were NOT built to be
"linear" amps. If I told you what the DK and the peak on a 4 tube Elkin is
you would stop having a cow over the specs on the 8 tube and start wondering
how to get the elephant out of your ass.
Here is a quick look up on Elkin amps from google::

ERICTO wrote:
>
> I think Dennis may know this one, I just picked up a mobile amp at a yard
sale
> that is using 8 12dq6b tubes.

There is only one amp that used 8 of those tubes.
It was an 8 tube Elkin!

> I remember seeing a post about those tubes
> in a amp. I hooked it up and I'm getting about 250-300 watts out.

That amp was not designed to dead key that much.

> I'm just
> wondering if thats about it out of it or is it worth going thru and
retubing. I
> think
> the post talked about a company that made a 2, 4, 6, 8 tube amps using

> switches on the amp box itself. Any comments on this amp...
> (sorry Dennis, if I had a pic I would send you one to look at)
>
> Eric...

I know what the box looks like. It is plain
aluminum with numerous round cooling holes punched
in both the main chassis and the cover. The remote
plugs into an octal tube socket on the side of the
unit and there are numerous screwdriver
adjustments on the outside of the case on
different sides of the case. The transistors and
heatsinks for the inverter circuit that generates
the high voltage for the tubes are all located
inside the case.

That box was designed to dead key very low (like
50 to 100 watts) and peak very high (like 700 to
1200 watts peak), but you need a true peak reading

meter to tune it properly!

Dennis

Great point. You have actually summed up Aaron's true purpose on USENET. You see, while I may not beat folks over the head over, what I (& ONLY I) consider, minor infractions, I've always done what I felt was "in the best interests" of the CB. What you've outlined above is almost the textbook definition of "trolling." It has nothing to do with persuading someone to reduce their power, use a low pass filter, establish an effective RF ground, not to remove or disable their ALC, optimize their antenna system, etc...all of which result in reduced (or eliminated) TVI/RFI. When you peel away the layers, what you're left with has very little to offer...either here or in real life practice. Take it easy.

What you will find a lot of times is that you find the fun of CW later in your career. I did my twenty for the FCC but really didn't do a whole lot with it until later. A lot of us would just as soon get rid of the code test because it is now so slow that you learn too many bad habits just passing the verstunken test. The mode will stand on its own for cheapness and the involvement of one's brain and for the sheer fun of it. But like sauer kraut and scots whisky no one really likes them the first time.

And you raise a good point with respect to digital, voice or otherwise. It works or it don't and on an unreliable HF circuit, don't is far too much of the time. The problems for which CDMA and TDMA (and they were developed for analog circuits BTW) were developed are not really hobby problems; the commercial jocks need 99 and a lot of nines reliability and have to handle masses of comms to pay the bill where a hobby circuit need only offer fun. Overuse of commercial techniques is one of the gripes OTs have with digifreaks; kind of reminds one of religious fundamentalists -- we have the answer, what's your question.

This month's Q-Street has a spread on a digital EME caper called JT44 where someone really thought an admittedly esoteric application through from beginning to end. As a digital product it sucks swampwater thru a long and thin tube but it does things like automatic tuning and timing correction in the software which are kind of useful if you are operating below the noise level on a moving reflector. Its thruput and bandwidth kind of suck for HF but that is not why it was done.

I have a problem with digital applications where I have to tune it on the nose til the boops and beeps are right, tell the software I am doing SITOR or RTTY or whatever, and use my compooter as an IBM Selectric typewriter; we did that 30 years ago with toroids. PSK 31 is neat but not all that neat. Digital voice can be done now if the QRM and selective fade is not too bad but it is not an improvement on 1935 SSB. The advantage analog has is that the brain makes better software than digital designers do so it can be understood by humans well after the digital screen has turned blue.

It would seem that two criteria have to be met for the long-promised and underdelivered 'digital revolution' to take place: coding structures that contain the key to their own decoding and software that both uses and has some intelligence. Heathkit did digital FM decoding of analog signals nearly 40 years ago with vacuum tubes but most of the current crop of digifreaks could not do it or even believe that it was done. If you think about it, an FM sig already has the key as for that matter does RTTY but the only major use of digital technology in FM has been the addition of

the subcarrier that on some rigs tells me that I am listening to KWWW the 'Turnip Grinder' and La Donna e Mobile' by Tex Ritter is playing, BFD.

Do the world a favor, take the blessed code test.

Bert how come you're using *this guy's* post to illustrate *my*
purpose on UseNet? As if there is such a thing as "One's Purpose On
Usenet". What's your purpose on Usenet? What's Train's purpose on
Usenet? Twistedhed's? SD Jones? You may have unintentionally opened up
a can of worms here.

International Treaties aside, I suppose if the equipment was
non-user-serviceable (as in commercial services etc) a license-free CW
service authorized at 100 watts of output might fly. But it sounds
like what you are proposing is a hobby radio service, and a hobby
radio service infers tinkering, experimenting, etc., and at that
point, the FCC has to apply the logic that a suitable hobby radio
service already exists (ARS) that is authorized to use CW at that
power level on a number of bands with good skywave propagation. They
might also point out that the requirements for entry-level licensing
in it are fairly minimal, and if you are going to use CW anyway, a 5
wpm code test is merely a matter of being able to recognize the Morse
alphabet.

and
> audio.

*So you're saying that SSB cannot be described in PEP terms?
*My definition came from the [Mobile Radio Handbook IEEE press]
*I feel the need to stick with their terminology and description.
*I think I see where you're going with the "envelope" thing.
*You're saying that unless there's a envelope you cant measure in PEP?
*If you correctly two-tone modulate a SSB signal do you see an envelope?
*Isn't there a crest at the upper and lower borders of the envelope?
*In a single tone modulated SSB signal isn't there a crest to the
waveform?
*Let me put forth an example where PEP is a valid measurement without
benefit of a modulated signal. The example entails applying 2,3 or more
closely spaced carriers to an amplifier input. At the output you have
those
same carriers but, because the phases of those carriers will at some
point
match, the output will be considerably higher than a typical wattmeter
can
show. The output is measured in PEP, yet no modulation is applied to any
of the carriers. This from several references including Eimac's
book [Care and Feeding of Power Grid Tubes] which I'm
betting is on one of your bookshelves.

> A unmodulated carrier (AM) has no envelope, so PEP is going to be zip.
> Even if you wanted to try and measure AM power, AM has two

> sidebands that cancel each other when measuring power, which is why
> your wattmeter doesn't move when you speak into the mic.

*How do the sidebands cancel each other?
*Isn't AM an additive process?

> Some meters cheat and include a "sample-and-hold" circuit to measure
> the AM power peaks, but this isn't accurate because it doesn't measure
> the power at the valley, nor does it subtract the carrier power from
the
> modulation envelope power.

*If the sidebands cancel each other how can there be any
peaks above the un-modulated carrier level?
*If, as you say, PEP is only valid for measuring the peaks
of an envelope pattern then why is wrong to ignore the part of the
composite
pattern that represents a near zero value and only measure the peaks? If
you
need to see the "valleys" then a scope is needed.
*Can't you simply look at the peak and then subtract the unmodulated
reading?

> Not only that, but measuring PEP on AM is
> almost pointless since peak power is going to max out at 4 x carrier
power
> under 100% modulation, and if you can get an accurate measure of the
> carrier power and another meter shows your modulation percentage, a
> PEP meter on AM brings with it more problems than it solves. So
> basically, the only reason PEP meters are used by CBers is so they can
> watch the little needle move.

*As I see it the modulation meter is nothing less than a
peak reading meter calibrated in terms of modulation percentage instead
of
power. In using a modulation meter what are you actually measuring? I
say
it's measuring a peak power referenced to an unmodulated carrier. The
expectation of the meter is that for 100% modulation, the peak rf power
is
going to be (x)db. higher than the resting carrier power and the meter
face is
calibrated accordingly.
It could just as easily been calibrated in terms of PEP and
with some mental gymnastics a modulation percentage can be derived.

> >The RMS method is just fine for measuring these modes as
> >well.
>
> Again, RMS only works on a sine wave. A modulated signal has two
> components: the RF and the modulation. The RF may be a sine wave, but
